

REPUBLIC OF UZBEKISTAN

**ORDER OF THE MINISTER OF HIGHER EDUCATION, SCIENCE AND
INNOVATION**

15 April 2026

No. 142

Tashkent City

**On improving the process of developing normative-methodical
documents of higher education**

In accordance with the Law of the Republic of Uzbekistan “On Education,” Resolution No. PQ-200 of the President of the Republic of Uzbekistan dated 3 July 2023 “On measures for the effective organization of state governance in the field of higher education, science and innovation within the framework of administrative reforms,” and Control Plan No. 01-16-451 dated 11 November 2025 of the Ministry of Higher Education, Science and Innovation for the effective implementation of the “Roadmap” of proposals approved by the President of the Republic of Uzbekistan and assignments given based on the presentation results on the development of the science and education sector, and with the aim of improving the educational, normative and methodical documents of higher education,

I HEREBY ORDER:

1. The proposals of higher education institutions on bringing the curricula and syllabuses of educational fields and specialties to a single normative document format, while optimizing them, shall be approved, with the aim of further improving the system for developing, approving and applying the educational, normative and methodical documents of higher education to the educational process, as well as improving the quality of the educational process organized on the basis of the credit-module system.

2. The Procedure for developing curricula for subjects of higher education fields and specialties shall be approved in accordance with Annex 1;

The standard form of the curriculum for subjects of higher education fields and specialties shall be approved in accordance with Annex 2.

3. The Department of Higher Education Institutions (A. Mamanazarov) and the Center for Higher Education Development Research (A. Xoliqov) shall

organize training seminars by 20 May 2026 for the persons responsible for the educational-methodical activities of higher education institutions (heads of educational-methodical departments (divisions), deans, deputy deans, heads of departments, professors) on the procedure for developing curricula.

4. Rectors of higher education institutions and directors of branches shall, starting from the 2026/2027 academic year, develop curricula on the basis of the established procedure and take measures to apply them to the educational process.

5. The standard form of the curriculum and syllabus approved by Annex 2 to Order No. 259 of the Minister of Higher Education, Science and Innovation dated 9 June 2023 “On improving the process of developing normative-methodical documents of higher education” shall be deemed to have lost its force.

6. Control over the execution of this order shall be entrusted to the First Deputy Minister S. Radjabov.

Minister

K. Sharipov

GUIDELINES

for designing and developing program curricula for HEI

Chapter 1. General provisions

1. This Procedure for developing curricula for subjects of higher education fields and specialties has been developed in accordance with the Law of the Republic of Uzbekistan “On Education,” Resolution No. PQ-200 of the President of the Republic of Uzbekistan dated 3 July 2023 “On measures for the effective organization of state governance in the field of higher education, science and innovation within the framework of administrative reforms,” and Control Plan No. 01-16-451 dated 11 November 2025 of the Ministry of Higher Education, Science and Innovation for the effective implementation of the “Roadmap” of proposals approved by the President of the Republic of Uzbekistan and assignments given based on the presentation results on the development of the science and education sector.

2. This Procedure for developing curricula for subjects of higher education fields and specialties (hereinafter referred to as the “Procedure”) establishes a unified procedure for developing and approving curricula for subjects of higher education fields and specialties on the basis of state educational standards, qualification requirements and curricula (study plans), as well as for their introduction into the educational process of higher education institutions.

3. The following basic concepts are used in the Procedure:

qualification requirements – a normative-methodical document that defines the field, objects and types of professional activity of a bachelor’s or master’s degree graduate of a higher education institution, the requirements for their professional competencies, their specialty (qualification), as well as the catalogue of academic subjects serving to form these competencies;

curriculum (study plan) – a normative-methodical document that defines, for the entire period of study, the types of educational activity, the composition of academic subjects and courses, the sequence of their study, and their volume in hours and credits for a specific bachelor’s educational field or master’s specialty of higher education;

academic subject – a component of the curriculum designated for mastery in a specific educational field and specialty, constituting the content of education; a systematized scientific-methodical complex embodying the knowledge, skills and competencies that a student is required to acquire;

curriculum (syllabus/program) – a normative-methodical document indicating the main topics, content, optimal methods of mastery, types of classes and information sources of an academic subject that determine the content of education;

subject (module) supervisor – a professor/teacher appointed by the department, who develops the curriculum for a specific subject in cooperation with other professors/teachers. They also coordinate the prepared educational content (lecture texts, laboratory, practical and seminar classes, methodical guidelines and manuals for independent study, presentations, video and audio lessons).

4. The curriculum is developed in accordance with the “State Educational Standard of Higher Education. Basic Provisions,” as well as the qualification requirements and curriculum (study plan) of the relevant educational field and master’s specialty.

Chapter 2. Purpose and objectives of the curriculum

5. The main purpose of the curriculum is to determine the set of knowledge, skills and competencies that must be formed by a specific subject included in the curriculum, in order to ensure the high-quality training of competitive specialists in accordance with the requirements set for the knowledge, abilities, skills and competencies of a bachelor’s or master’s graduate in the state educational standards and qualification requirements, and to organize the content and structural components of the subject.

6. The main objectives of the curriculum are as follows:

forming the topics of academic sessions taking into account the latest achievements of science, engineering and technology related to the academic subject, as well as advanced foreign experience; distributing educational materials by topics and types of academic sessions in accordance with the form of education and the time allotted to the subject, optimizing them, and ensuring their logical sequence and integration with other subjects;

ensuring continuity and coherence between the levels of the continuous education system, as well as ensuring that the content and topics of the subject

do not duplicate the content and topics of subjects in other levels of education and related fields;

determining the educational-methodical conditions, educational literature and didactic materials necessary for mastering the subject and forming the subject-related competencies, professional knowledge and skills of learners established in the qualification requirements, as well as determining the forms of monitoring learners' knowledge using assessment tools and methods.

Chapter 3. Content and structure of the curriculum

7. In the curriculum, educational materials are arranged in a logical sequence in the form of lectures, seminars, colloquia, practical and laboratory classes, and educational and production (clinical, creative and other) internships; in addition, in accordance with the purpose and objectives of the academic subject, course projects, coursework, independent work, design-and-calculation, creative, laboratory and other assignments are included in the curriculum in accordance with the allotted time norms.

8. The curriculum must consist of the following structural components.

8.1. The following shall be reflected on the cover page and page 2 of the curriculum:

the cover page (title page) shall indicate the name of the state body governing higher education, the name of the higher education institution, the signed and sealed mark confirming that the curriculum has been approved in the established manner, the full name of the academic subject, the names of the relevant knowledge and education field and the educational field (specialty) together with their corresponding codes in accordance with the "State Educational Standard of Higher Education. Classifier of Higher Education Fields and Specialties," and the year in which the curriculum was developed and approved;

the second page of the curriculum shall indicate the compilers' surname, first name, patronymic, academic degree and title, place of work and position; the surname, first name, place of work, position, academic degree and title of the reviewers who gave their opinion on the curriculum; as well as the number and date of the minutes of the Faculty and Department Council meetings at which the curriculum was considered.

8.2. Starting from the third page of the curriculum, the following shall be reflected:

Subject information. This section sets out, in tabular form, the main parameters of the curriculum (subject code, academic year of introduction, semester, credits (hours) allocated to the subject, subject type (compulsory, elective), language of instruction, weekly class hours, name of the subject, volume of classroom and independent classes, and total workload);

Content of the subject. The purpose of the academic subject and its main objectives shall be set out in connection with the tasks of training a specialist in the relevant field (specialty);

Prerequisite knowledge required to master the subject. This section lists the prerequisite subjects in the curriculum necessary for mastering this subject. Curricula for first-year academic subjects are exempt from this requirement;

Learning outcomes. This section sets out the professional competencies, knowledge and skills established in the qualification requirements that a student must acquire specifically through this subject upon mastering it;

Content of the subject and forms of classes. The content of the academic subject is divided into types of classes in accordance with its structure, purpose and objectives. The main theoretical part of the subject is given in the “Lecture” section. Lecture topics are presented in a logical sequence, with the essence of each topic expressed through basic concepts and brief statements, covering the knowledge and skills that must be conveyed to learners on the basis of the state educational standard and qualification requirements. The main theoretical part may be presented in the form of modules;

In accordance with the nature and theoretical content of the academic subject, classes are recorded under “Practical Classes,” “Seminars,” “Laboratory Classes” and other forms mainly aimed at mastering practical skills. This section covers the topics of these classes, the procedure for conducting them, the recommended educational technologies, methods and tools to be used, the topics and issues to be discussed where necessary, the content and purpose of laboratory work, and other information arising from the nature of the subject. It also covers the nature, content, purpose and topics of course projects, coursework and creative work, the forms for carrying them out, and other information arising from the nature of the subject. In addition, this section provides brief methodical guidelines on the purpose, tasks, form and content of educational and production internships, and on the form of the final work that learners must prepare during the internship;

Independent study assignments. This section lists the assignments that students must master independently and that are intended for independent work. Independent study assignments are organized on the basis of methodical guidelines developed by the departments of higher education institutions for organizing students’ independent study. In this regard, the independent work assignments performed by students for the subject (module) may be of a varied nature. It is advisable that at least one-third of the independent work assignments be designed for cooperative work in small groups;

Educational technologies and methods. This section describes the classes used for mastering the academic subject, and the pedagogical technologies

and methods used in conducting classes (writing essays, theses and articles, group work, project-based assignments, preparing presentations, conducting surveys, forming independent-work competencies, etc.);

Requirements for students to obtain credits. This section establishes the requirements for monitoring (assessing) students' knowledge and for obtaining credits in the academic subject;

Criteria for assessing students' knowledge. This section presents the criteria for assessing students' knowledge in a logical sequence and to an extent corresponding to the weight of the grades. The assessment criteria must ensure that the degree to which a student has mastered a particular academic subject is determined reasonably. In art, culture, sport and other specific educational fields, the assessment criteria are established in accordance with the nature of these fields;

Recommended literature and sources. The list of the main literature used and additional literature is provided, indicating its availability (printed or electronic) in the information-resource centers of the higher education institution, as well as various information and communication resources from the Internet, dissertations and monographs. Literature should be reflected as broadly and in as much detail as possible. In this regard, sources used at foreign universities included in the world's authoritative TOP-300 ranking for the subject, as well as scientific articles published in the most authoritative journals, should also be recommended. It is also recommended that the main literature be published within the last 5 years and comprise at least 3-5 titles, depending on the nature of the subject.

Chapter 4. Procedure for developing and formalizing the curriculum

9. Curricula for each academic subject specified in the study plans are developed and approved by higher education institutions in accordance with the state educational standards of higher education, the qualification requirements of bachelor's educational fields and master's specialties, and the study plans.

10. The curricula for the subjects "Modern History of Uzbekistan" (including the module on National Pride and Patriotism) and "Philosophy" (including the modules on Religious Studies and Anti-Corruption), which are recommended for inclusion in study plans, are developed and approved by the relevant leading higher education institution in the field of humanities. Other higher education institutions shall use these curricula.

11. Curricula are formed on the basis of the purpose, tasks, content and nature of the educational fields and specialties, arranging the topics and content of the subject in a logical sequence in the established manner, and observing the time norms allotted to the academic subject.

12. The curriculum is developed in the language of instruction (Uzbek, Russian, Karakalpak, etc.) on the basis of the "State Educational Standard of Higher Education. Basic Provisions," the professional standard, the qualification requirements and the study plan, and is approved in the established manner by the dean of the faculty (in higher education institutions without a faculty dean, by the heads of departments) before the start of the educational process.

13. Curricula must be approved before the start of the new academic year, and one original copy, together with an electronic (PDF) copy, must be kept in the educational-methodical department.

14. The text of the curriculum is printed on standard A4 sheets, in 14-point "Times New Roman" font, with 1.15 line spacing, with margins of 20 mm on the left and right, 25 mm at the bottom, and 20 mm at the top, with page numbers placed in the center of the bottom of the sheet.

After approval, curricula are issued in booklet form in A5 format.

15. The approved electronic (PDF) copies of approved curricula are kept, in the established manner, at the Center for Higher Education Development Research under the Ministry of Higher Education, Science and Innovation of the Republic of Uzbekistan.

16. The curricula for full-time (daytime) education serve as the basis for other forms of education. Curricula are prepared taking into account the specific features of the educational fields and specialties.

On the basis of the basic curricula, working curricula are developed in the established manner for forms of education combined with employment (evening (shift-based), correspondence (special correspondence), and distance education) and are approved by the relevant higher education institutions.

Chapter 5. Final provisions

17. Curricula prepared by higher education institutions are subject to selective, ongoing monitoring and analysis by the Center for Higher Education Development Research under the Ministry of Higher Education, Science and Innovation of the Republic of Uzbekistan, in terms of their compliance with the state educational standards, qualification requirements and study plans of higher education, as well as their quality.

*Annex 2 to Order No. 142 of the Minister of Higher Education, Science and
Innovation dated 15 April 2026*

Sample 1

**REPUBLIC OF UZBEKISTAN
MINISTRY OF HIGHER EDUCATION, SCIENCE AND INNOVATION
TASHKENT STATE TECHNICAL UNIVERSITY NAMED AFTER ISLOM
KARIMOV**

“APPROVED”

Dean of the Faculty of Oil and Gas

F. Rakhmatullayev

“28” August 2026

**CURRICULUM
FOR THE SUBJECT “ECOLOGY”
(full-time education)**

Knowledge field: 700 000 – Engineering, Manufacturing and Construction

Education field: 710 000 – Engineering

Educational field: 60711800 – Environmental Engineering

Tashkent – 2026

This curriculum has been approved by Minutes No. 6 of the meeting of the Council of the Faculty of Oil and Gas dated 20 August 2026.

This curriculum has been presented by the Department of “Ecology and Environmental Protection” of Tashkent State Technical University (Minutes No. 7 of the department meeting dated 15 August 2026).

Compilers:

U. Safayev – Doctor of Technical Sciences, Professor, teacher of the Department of “Ecology and Environmental Protection” of Tashkent State Technical University.

M. Ziyayeva – PhD, Associate Professor, teacher of the Department of “Ecology and Environmental Protection” of Tashkent State Technical University.

Reviewers:

U. Xolmatov – Doctor of Technical Sciences, Professor, teacher of the Department of “Ecology and Environmental Protection” of Tashkent Institute of Chemical Technology.

1. Subject information	
Subject/module code	EKO1504
Academic year	2026–2026
Semester	5
ECTS credits	4
Subject/module type	Compulsory
Language of instruction	Uzbek / Russian
Sequence number in the study plan	60711100 – 1.21
Weekly class hours	4
Name of the subject	Ecology
Total workload (hours)	120
Classroom classes, total – 60 hours, of which:	Lecture – 30; Practical – 16; Laboratory – 14
Independent study (hours)	60
Course work	–

2. Content of the subject

The purpose of the subject is to teach students the interrelationships between nature and society, and to help them understand environmental problems and methods for solving them.

The objectives of the subject are to study the theoretical foundations of ecology and the main components of the environment, to understand ecological balance and the consequences of its disruption, to analyze environmental risks and sources of pollution, and to become familiar with the principles of sustainable development.

3. Prerequisite knowledge required to master the subject	
No.	Prerequisite subject
1.	(K1106) Chemistry
2.	(F1206) Physics

4. Learning outcomes (LO)

Professional competencies:

Cod e	Description
LO1	must possess basic initial knowledge of the theoretical foundations of ecology and environmental pollution;
LO2	must be able to identify the measures and methods carried out for nature conservation;
LO3	the student must have knowledge of the current state of the field, its development prospects, and the specific features of their application;
LO4	must have knowledge of the principles of the proper use of natural resources.
LO5	knows the specific features of linking human production activity with the environment and knows how to apply them;
LO6	is able to help future specialists coordinate production activity with the environment;

Skills:

Cod e	Description
LO7	is able to acquire skills in the proper use of natural resources;
LO8	knows how to make initial decisions on how to properly approach the solution of existing environmental problems.
LO9	acquires the skill of searching for and evaluating the necessary information from various sources related to ecology, and using it to perform professional tasks on the basis of a systematic approach;
LO10	is able to critically analyze situations in order to find the most effective solutions to environmental problems, and applies environmental norms, technical regulations and industry standards in daily activity.

5. Content of the subject and forms of classes

Lecture (L) — 30 hours

Co de	Topic	Hr s
L1	Introduction. Theoretical foundations of ecology and environmental protection. Cultural and historical stages of ecology. The purpose and objectives of the subject. The state of the environment in Uzbekistan. [1,2]	2
L2	Environmental factors and their types. The influence of environmental factors on organisms. Anthropogenic changes and their types. Ecological laws and regularities. [1,2]	2
L3	The concept of the biosphere, its composition and functions, the biosphere and the universe. The concepts of ecosystem, population and biogeocenosis. The circulation of substances in nature. Stability and ecological succession in an ecosystem. [1,2,4]	2
L4	Natural resources, their classification and types. Energy and mineral raw material resources. Real and potential resources. Alternative and environmentally clean energy sources in industry. [1,2,4]	2
L5	The concept of nature use. Principles of the efficient use of natural resources. Problems of the rational use of underground minerals. The use of mineral resources in Uzbekistan. [4]	2
L6	The atmosphere. The composition and structure of the atmosphere. Atmospheric pollution and its sources. The global carbon cycle on Earth; deforestation, land degradation (the greenhouse effect, acid rain, depletion of the ozone layer). [2,6]	2
L7	Pollution of atmospheric air with toxic gases, and ways to reduce and neutralize it. Global change – climate change, loss of habitats and invasion of species. Sanitary-hygienic and ecological standardization of environmental quality. The concepts of maximum permissible concentration (MPC) and maximum permissible emission (MPE) standards. [2,6,7]	2
L8	Engineering measures for protecting atmospheric air. Methods for purifying atmospheric air of toxic gases. Adsorption, absorption, chemisorption, catalytic and thermal purification methods. [2,5,6]	2
L9	Methods for purifying atmospheric air of dust. Effective methods and equipment for dust removal. Devices used in industrial enterprises for cleaning air of various types	2

	of dust — dust collectors and filters; dry, wet, oil and electrical methods of air purification. [2,5,6]	
L10	The hydrosphere and its problems. The role and significance of water in nature. The overall state of water resources in the Republic of Uzbekistan. Insufficient provision of the population with drinking water. Improving water supply. The Aral Sea problem. [2,4]	2
L11	Wastewater and its types. Classification of industrial wastewater according to its various characteristics. Methods for treating wastewater (mechanical, physico-chemical, chemical and biological methods). Wastewater treatment systems and facilities. [2,5,6]	2
L12	The lithosphere. Soil, its significance and role in the life of living organisms. Soil erosion and ways to combat it. Natural and artificial erosion, water and wind erosion. Land degradation. [2,4,5]	2
L13	Monitoring the state of the environment. The concept, methods and types of monitoring. Environmental monitoring and its objectives. Economic mechanisms of nature conservation. State ecological expertise. [2,5]	2
L14	Ecology and international cooperation. Nature and international cooperation. The concept of environmental management and sustainable development. [2]	2
L15	International environmental organizations. International environmental organizations, conferences and funds. International environmental responsibility. [4,7]	2

Practical classes (P) — 16 hours

Co de	Topic	Hr s
P1	Calculating the actual concentration of harmful substances C_m present in atmospheric air (taking into account the background concentration C_f of substances that are always present) and the maximum permissible emission (MPE) standards (CO_2 , NO_2 , SO_2 , dust).	2
P2	Calculating dust dispersed into the atmosphere and its maximum permissible emission standards.	2
P3	Calculating the mass quantity M (g/sec) of harmful gases emitted in bulk into the atmosphere and the maximum permissible emission standards of all their components (CO_2 , NO_2 , SO_2 , NH_3).	2

P4	Calculating the amount of flue gases generated based on the composition of the fuel.	2
P5	Calculating and selecting a cyclone (dust separator).	2
P6	Calculating the economic efficiency of measures aimed at treating dust and gas emissions.	2
P7	Calculating the damage resulting from the discharge of a pollutant into water bodies.	2
P8	Calculating the degree of wastewater treatment.	2

Laboratory classes (Lab) — 14 hours

Co de	Topic	Hr s
Lab 1	Approximate determination of wastewater turbidity.	2
Lab 2	Determining the technological parameters of horizontal settling tanks.	2
Lab 3	Determining the amount of suspended solids in wastewater by filtration through a filter using the gravimetric method.	2
Lab 4	Physico-chemical methods of wastewater treatment.	2
Lab 5	Treatment of wastewater to remove organic substances by the adsorption method.	2
Lab 6	Obtaining biogas.	2
Lab 7	Organoleptic determination of the composition of gas emissions.	2

6. Independent study assignments — 60 hours		
No.	Assignment	Hrs
1	Analyzing the performance indicators of dust and gas cleaning equipment in tabular form.	10
2	Developing an action plan for obtaining secondary products from industrial waste, and defending it.	10
3	Developing a comprehensive plan of measures for managing industrial waste according to its composition (using the example of a particular production facility).	10
4	Environmental safety and monitoring. Analyzing and assessing environmental risks in industry.	10
5	Collecting information on pollutants accidentally (or simultaneously) discharged into water bodies and onto land.	10
6	Preparing a reference report on generated solid household waste and its disposal.	10

** Note: The independent work assignments performed by students for the subject (module) must be of a varied nature. One-third of the independent work assignments must be designed for cooperative work in small groups.*

7. Educational technologies and methods
• lectures; • performing and drawing conclusions from practical and laboratory work; • interactive case studies; • rapid-fire (blitz) surveys; • group work; • giving presentations; • projects for teamwork and defense.

8. Requirements for students to obtain credits
Fully mastering the theoretical and methodical concepts related to the subject, being able to correctly reflect the results of analysis, conducting independent reasoning about the processes being studied, completing the tasks and assignments given for control, and submitting a written paper for the final assessment.

9. Criteria for assessing students' knowledge

a) To receive a grade of 5 (excellent), a student's level of knowledge must meet the following:

- fully reveals the essence and content of the subject;
- presents the topics of the subject while maintaining scientific rigor and logic, without allowing scientific errors or confusion;
- has a clear understanding of the theoretical or practical significance of the subject's topic materials;
- demonstrates the ability to think freely and independently within the subject;
- gives clear and concise answers to the questions asked;
- is thoroughly prepared with lecture notes;
- has completed independent assignments fully and accurately;
- has mastered all practical skills and abilities;
- is able to apply theoretical knowledge in various situations;
- follows a systematic approach and maintains continuity.

b) To receive a grade of 4 (good), a student's level of knowledge must meet the following:

- understands the essence and content of the subject and does not allow scientific or logical confusion in presenting the topics;
- understands the practical significance of the content of the subject;
- completes the assigned tasks and assignments within the scope of the curriculum;
- correctly answers the questions asked on the subject;
- has thoroughly compiled lecture notes on the subject;
- has fully completed the independent assignments on the subject;
- has made an effort to master all practical skills and abilities.

c) To receive a grade of 3 (satisfactory), a student's level of knowledge must meet the following:

- has a general understanding of the subject;
- presents the topics of the subject in a narrow scope, allowing some confusion in the presentation;
- has fully completed independent assignments on the subject;
- the presentation is not fluent;
- gives vague and confused answers to questions on the subject;
- the text on the subject has not been thoroughly composed;

d) In the following cases, a student's level of knowledge may be assessed as unsatisfactory with a grade of 2:

- has not prepared for classes on the subject;
- has no understanding whatsoever of the classes on the subject;
- has not fully completed independent assignments on the subject;
- it is evident that texts on the subject have been copied from others;
- serious errors and confusion have been allowed in the text on the subject;
- no answer is obtained to the questions asked on the subject;
- does not know the subject.
