16. FINAL RULES..... 179

1. GENERAL RULES

1.1.This "Policy and Standards for Ensuring the Quality of Education at Termez State University" (hereinafter referred to as the Policy) defines the general goals, principles, standards, organizational framework and implementation mechanisms for ensuring, evaluating and continuously improving the quality of education at Termez State University (hereinafter referred to as the University).

1.2.This Policy has been developed on the basis of the Constitution of the Republic of Uzbekistan, the Law of the Republic of Uzbekistan "On Education", decrees and resolutions of the President of the Republic of Uzbekistan on the development of higher education and ensuring the quality of education, resolutions of the Cabinet of Ministers of the Republic of Uzbekistan on the organization of the higher education process and accreditation of educational organizations and educational programs, state educational standards of higher education, the University Charter, the strategic development program and other current regulatory legal acts.

1.3.In developing and implementing policy, internationally recognized standards, recommendations, and best practices in the field of quality assurance in higher education are taken into account within the framework that does not contradict national legislative requirements.

1.4.The policy is an integral part of the University's strategic management system and is implemented in conjunction with the University's development strategy, academic policy, educational programs, documents regulating the activities of structural divisions, and other internal regulatory documents.

1.5.The university assumes institutional responsibility for the quality of educational programs it implements, the educational process and its outcomes, the assessment of student knowledge, the activities of faculty members, educational resources, and student support services.

1.6.This Policy applies to all undergraduate, graduate and postgraduate educational programs, forms of education, faculties, departments and structural divisions involved in the organization and support of the educational process implemented at the University.

1.7.Ensuring the quality of education at the university is the shared responsibility of the leadership, collegial bodies, faculties, departments, structural divisions, professors, teachers, staff, and students.

1.8.Students, graduates, employers, professional organizations, partner educational institutions, and other stakeholders are involved in the development, implementation, monitoring, and improvement of educational

programs in a timely manner.

1.9.Ensuring the quality of education at the university is carried out on the basis of the following interrelated processes:

- setting quality goals and expected results;
- planning educational programs and the educational process;
- providing the necessary academic, human, informational, and material resources;
- regular monitoring of the educational process and results;
- conducting internal evaluation and analysis;
- to study the opinions of stakeholders;
- eliminate the causes of identified problems and deficiencies;
- assessing the effectiveness of the measures taken;
- Continuous improvement of educational programs and processes.

1.10.Ensuring the quality of education is not just about control and inspection. It is a continuous institutional process that encompasses quality planning, assurance, monitoring, evaluation and improvement.

1.11.The system of ensuring the quality of education at the university is aimed at ensuring the interdependence of education, training, scientific activity and practical training, a student-centered approach, academic integrity, equal opportunities, and the compliance of educational outcomes with the needs of society and the labor market.

1.12.The information generated in the processes of ensuring the quality of education should be objective, reliable, complete, comparable and provided in a timely manner. This information serves as the basis for making management decisions and improving the quality of education.

1.13.This Policy consists of 16 chapters and 22 annexes located within the relevant chapters. The annexes are an integral part of the Policy and are used to implement the relevant standards, assess, monitor, document results and determine improvement measures.

1.14.This Policy is approved by the University Council, implemented by order of the Rector, and published for the public on the official website of the University.

1.15.The University's educational quality regulations, procedures, regulations, guidelines, monitoring tools, and reporting forms will be developed or revised in accordance with this Policy.

1.16.The implementation of the Policy is monitored regularly. Appropriate amendments and additions are made to the Policy when legislative requirements, state educational standards, accreditation procedures, strategic goals of the University, or organizational structure change.

1.17. This Policy will be reviewed as necessary. Amendments and additions will be made to it based on the decision of the University Council.

2. BASIC CONCEPTS AND ABBREVIATIONS

2.1. Basic concepts

The following key concepts are used in this Policy:

quality of education - the degree to which educational programs, the educational process, the created conditions and the achieved results comply with state educational standards, qualification requirements, professional standards, where appropriate, established educational outcomes and the justified needs of stakeholders;

quality assurance - a set of planning, implementation, monitoring, evaluation and improvement processes aimed at ensuring, maintaining and improving the compliance of educational activities and their results with established requirements and expected results;

internal quality assurance system - a set of interconnected organizational structures, authorities, responsibilities, internal documents, processes, criteria, indicators, information resources and monitoring tools for planning, ensuring, monitoring, evaluating and continuously improving the quality of education at the University;

quality culture - the shared values, visions, and practices of the University community, aimed at understanding common and individual responsibility for the quality of education, openness, collaboration, critical self-evaluation, evidence-based decision-making, and continuous improvement;

educational program - a comprehensive system consisting of educational objectives, expected learning outcomes, curriculum, subjects and modules, teaching, learning and assessment methods, and necessary resources aimed at achieving a specific academic level or qualification;

learning outcomes - knowledge, skills, qualifications and competencies that a learner should acquire and demonstrate in practical activities at the end of an educational program, module or subject;

Stakeholders - individuals and legal entities and their groups that influence, are affected by, or have an interest in the activities or results of the University;

internal stakeholders - students, faculty, management and administrative staff of the University, as well as structural divisions involved in the organization and support of the educational process;

external stakeholders - graduates, applicants and their parents, employers, government agencies, professional associations, partner

educational and scientific organizations, civil society institutions and other interested parties;

monitoring - the process of systematically collecting, verifying, analyzing and evaluating information on the status and development dynamics of educational processes, resources and results;

internal evaluation - a process of systematic study and assessment of the University, its structural divisions, educational programs and processes, based on reliable evidence, of their compliance with established requirements, criteria and goals;

external evaluation - the process of studying and evaluating the activities and results of a university or educational program based on criteria established by authorized state bodies, accreditation organizations, or independent external experts;

accreditation - the process of assessing and officially recognizing the compliance of an educational organization or educational program with established standards and criteria by an authorized body or organization;

non-conformity - non-compliance of an educational activity, process, document, resource or result with a specified requirement, standard, criterion, indicator or internal rules;

corrective action - measures aimed at eliminating the causes of the identified non-conformity, preventing its recurrence and improving performance;

supporting evidence - a document, electronic information, report, protocol, statistical indicator, survey result, or other reliable information that confirms the existence and implementation of an activity, process, or result.

2.2. Abbreviations

The following abbreviations are used in this Policy:

Abbreviation Full name

ESG	Standards and recommendations for quality assurance in the European Higher Education Area
DTS	State educational standards
TD	Educational program
PO'T	Faculty
HEMIS	Higher education process management information system
ETR	E-learning resources

Abbreviation Full name

MTT	Distance learning technologies
ECTS	European Credit Transfer and Accumulation System

3. PURPOSE, OBJECTIVES AND PRINCIPLES OF THE QUALITY ASSURANCE POLICY

3.1.The main goal of this Policy is to ensure the sustainable quality of educational programs, educational processes and their results implemented at the University, take into account the legitimate needs of stakeholders, develop a quality culture, and continuously improve educational activities.

3.2.The main objectives of this Policy are as follows:

- To form an interconnected and effective internal quality assurance system at the university;
- develop, implement and improve educational programs based on established learning outcomes, qualification requirements, and the needs of society and the labor market;
- developing student-centered education, training, and impartial assessment mechanisms;
- providing the educational process with qualified professors and teachers, modern educational and methodological, information, digital, and material and technical resources;
- regular monitoring and evaluation of educational programs, the educational process and the results achieved;
- to study the opinions of students, faculty, alumni, employers, and other stakeholders and take them into account in decision-making;
- ensuring an environment of academic integrity, academic freedom, equal opportunities, and non-discrimination;
- Timely identification of risks, problems and inconsistencies affecting the quality of education and taking measures to eliminate them;
- ensuring the reliability, transparency and effective use of quality information in management decisions;
- To foster shared and individual responsibility for quality within the university community.

3.3.The university assumes institutional responsibility for the quality of

education, the educational programs it implements and their outcomes, as well as the effective functioning of its internal quality assurance system.

3.4.Quality assurance at the university is based on the leadership of the management and the shared responsibility of all structural units, faculty, staff, and students. Each structural unit and employee is responsible for ensuring and improving the quality of education within their competence.

3.5.Ensuring the quality of education at the university is based on the following basic principles:

legality and compliance- Ensuring compliance of the University's activities with current regulatory legal acts, state educational standards, qualification requirements, internal regulatory documents, and internationally recognized standards and recommendations;

institutional responsibility- Recognition of the University's responsibility for the quality of educational programs, the educational process and its results;

leadership of the management- The university's management should set quality goals, align them with strategic development directions, and create the necessary conditions for their implementation;

general responsibility- view quality assurance as a common task of all structural divisions and staff of the University, not just a separate department;

student orientation- taking into account the needs, individual characteristics, rights, activity and participation of learners in the educational process;

stakeholder participation- Involve students, faculty, staff, alumni, employers, and other stakeholders in quality assurance and improvement processes;

equality and inclusion- creating equal opportunities for all learners, ensuring fair treatment, and preventing discrimination and unreasonable restrictions;

academic freedom and integrity- support academic freedom, comply with the requirements of academic honesty, and be uncompromising in dealing with corruption, plagiarism, and other unethical behavior;

process approach- manage activities that affect the quality of education as interconnected processes, defining their inputs, outputs, responsibilities, and performance indicators;

risk-based approach- take measures to identify, assess and mitigate risks and problems that may negatively affect the quality of education;

evidence-based decisions- making management decisions based on the analysis of reliable data, statistical indicators, monitoring results,

questionnaires and other supporting evidence;

impartiality and functional independence- ensuring the impartiality of monitoring and evaluation processes, preventing conflicts of interest and undue influence on evaluation results;

openness and accountability- providing stakeholders with reliable and understandable information about quality assurance processes, results and measures taken;

proportionality- apply quality assurance mechanisms in accordance with the level, direction, form, scope and specific characteristics of the educational program;

continuous improvement- Continuously improve educational programs, processes, resources, and internal quality assurance systems based on monitoring, evaluation, and stakeholder feedback.

3.6.The university management takes measures to provide the necessary human resources, material and technical, financial, information and educational and methodological resources to implement the goals and objectives in the field of quality, support the professional development of professors, teachers and staff, and eliminate factors that hinder quality improvement.

3.7.The development of a quality culture at the university is carried out through the awareness of the responsibility of each employee and student for the results of their activities, open communication, self-assessment, mutual exchange of experience, popularization of best practices and support for improvement initiatives.

4. ORGANIZATIONAL STRUCTURE OF THE QUALITY ASSURANCE SYSTEM, AUTHORITIES AND RESPONSIBILITIES

4.1.Ensuring and continuously improving the quality of education at the University is the shared responsibility of the University's leadership, management and advisory bodies, faculties, departments, structural divisions, professors, teachers, staff, and students.

4.2.The university's internal quality assurance system is organized at the following levels:

- strategic management and control;
- collegial management;
- functional leadership and coordination;
- monitoring, evaluating and analyzing the quality of education;
- quality assurance at the faculty and department level;

- supporting the educational process with resources and services;
- participation of faculty, learners, and other stakeholders.

4.3. The internal quality assurance system ensures a clear division of authority and responsibilities, the interdependence of processes, the evidence-based nature of management decisions, and the effectiveness of the measures taken.

ICHKI SIFATNI TA'MINLASH TIZIMINING TASHKILIY TUZILMASI

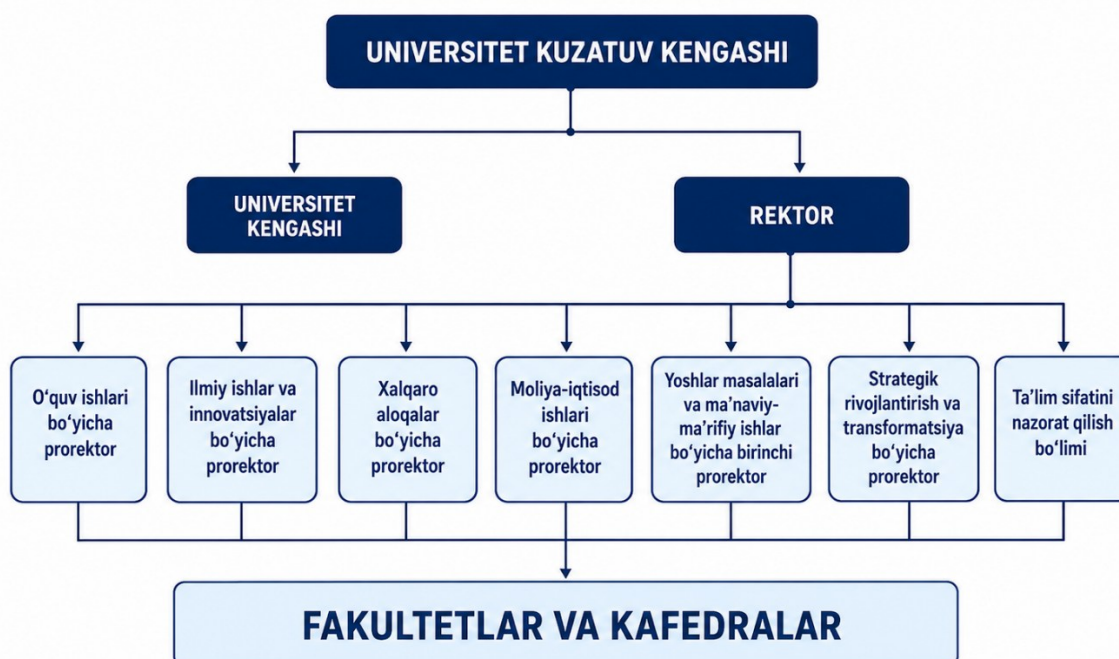

Figure 4.1. Organizational and functional structure of the internal quality assurance system at Termez State University

4.4. The head of each structural unit and responsible employee are responsible for the fulfillment of tasks related to the quality of education within their authority, the completeness and reliability of the information provided, and the timely elimination of identified shortcomings.

4.5. The Supervisory Board, within its powers, considers issues related to the strategic development of the University, financial stability, effective use of available resources, and performance. The Supervisory Board does not directly interfere in the daily and operational processes of ensuring the quality of education.

4.6. The University Council is the collegial governing body of the university and, within its powers, considers important issues related to ensuring the quality of academic activities and education.

4.7. University Council:

- reviews and approves the education quality assurance policy, academic policy and amendments to them;

- discusses important issues related to educational programs, the educational process, and educational and methodological activities;
- reviews reports on the quality of education, student achievement, graduate training, and the activities of faculty and departments;
- makes decisions on improving the quality of education based on the results of internal and external evaluations;
- considers the scientific, pedagogical, and professional potential and performance results of candidates when selecting professors and teachers for vacant positions on the basis of an open competition;
- Ensures accountability of those responsible for the implementation of decisions made and measures taken.

4.8.The Rector exercises overall leadership for the effective functioning of the internal quality assurance system at the University and assumes institutional responsibility for the quality of education.

4.9.Rector:

- ensures the implementation of policies, goals and priorities in the field of education quality;
- defines authorities and responsibilities for internal quality assurance processes;
- takes measures to allocate the necessary human, financial, material and technical, informational and educational and methodological resources to ensure quality;
- adopts orders for monitoring the educational process, analyzing lessons, organizing internal evaluation and other quality measures;
- determines corrective and improvement measures based on monitoring and evaluation results;
- Ensures accountability of vice-rectors, heads of structural divisions and other officials for the quality of education.

4.10.Vice-rectors are responsible for planning, implementing, monitoring, and improving processes that affect the quality of education within the areas of activity assigned to them.

4.11.Vice-Rector for Academic Affairs:

- planning, organizing and coordinating the educational process;
- ensuring that educational programs, curricula, educational process schedules and educational and methodological documents comply with established requirements;
- developing student-centered learning, teaching, and assessment mechanisms;
- organizing classroom activities, open lessons, and monitoring

educational and methodological resources;

- Leads activities to eliminate deficiencies identified in the educational process.

4.12. Vice-Rector for Research and Innovation:

- developing the integration of education and scientific research;
- ensuring the quality of training of scientific and pedagogical personnel;
- introducing the results of scientific research into the educational process;

- ensuring compliance with the requirements of academic integrity and scientific ethics in scientific activities;

- Leads the coordination of the processes of examination and evaluation of graduation qualification works, master's and doctoral theses in accordance with the established procedure.

4.13. Vice-Rector for International Cooperation:

- ensuring the quality of international and joint educational programs;
- coordination of international academic mobility;
- assessing the effectiveness of cooperation in the field of education with foreign partners;

- introducing advanced international practices into the educational process;

- Coordination of processes for recognizing educational outcomes obtained abroad

- leads the activities.

4.14. Vice-Rector for Youth Affairs and Spiritual and Educational Affairs:

- spiritual, social and educational support for students;
- ensuring equal opportunities and a healthy spiritual environment;
- studying student requests and needs;
- coordinating tutoring activities and evaluating their effectiveness;
- creating an anti-corruption environment;
- Leads activities to support the participation of students in University governance and community life.

4.15. The Vice-Rector for Finance and Economic Affairs coordinates activities to provide educational programs and educational processes with the necessary financial, material, technical and infrastructural resources, rational use of available resources, and creation of a safe and sustainable educational environment.

4.16. The Department of Education Quality Control is a structural unit that reports directly to the Rector of the University and coordinates, monitors,

evaluates, and analyzes internal quality assurance processes.

4.17. Education Quality Control Department:

- examines the compliance of educational programs, the educational process and its results with established requirements;
- organizes and coordinates internal evaluation, monitoring and analysis activities;
- organizes surveys among students, graduates, faculty, employers, and other interested parties;
- summarizes and analyzes data on the quality of classroom activities, student support services, and educational resources;
- prepares conclusions and proposals based on education quality indicators and monitoring results;
- monitors the implementation of corrective measures for identified problems and non-conformities;
- Provides periodic analytical information on the quality of education to the university management;
- Coordinates the systematization of documents and supporting evidence related to internal and external evaluation processes.

4.18. The monitoring and evaluation activities of the Education Quality Control Department ensure impartiality, functional independence, confidentiality, and avoidance of conflicts of interest.

4.19. The Department of Education Quality Control is not considered a single unit that ensures the quality of education. Ensuring the quality of education is a common task of the University leadership, structural divisions, professors and teachers, and other participants.

4.20. The Educational and Methodological Department ensures the organizational, normative, and educational and methodological coordination of the educational process.

4.21. Educational and Methodological Department:

- coordinates the development and implementation of educational programs, curricula, and learning process schedules;
- controls the timely and high-quality preparation of educational and methodological documents;
- organizes classroom activities and open lesson analysis activities;
- Participates in monitoring educational resources posted by faculty and students by subject and topic;
- promotes the introduction of modern pedagogical and digital technologies into the educational process;
- provides educational and methodological support to faculties and

departments.

4.22.The Registrar's Office ensures that information regarding student enrollment, academic results, credits, and educational trajectories is complete, accurate, reliable, and timely.

4.23.Registrar's office:

- records and maintains students' academic results;
- participates in the organization of control and evaluation processes within its competence;
- implements credit accumulation, transfer, and recognition processes;
- generates statistical data on student movement and academic development;
- Ensures accurate and timely maintenance of academic data in the HEMIS information system;
- ensures transparency, impartiality, and convenience of academic services provided to students;
- participates in the processes of transfer, restoration and recognition of learning outcomes.

4.24.The Academic and Methodological Council is an advisory body that, within the framework of its charter and powers, considers issues related to the academic and educational and methodological activities of the University.

4.25.Educational and Methodological Council:

- discusses educational programs, curricula, and teaching and methodological documents;
- develops recommendations for improving the quality of educational programs and educational and methodological support;
- considers issues of introducing advanced pedagogical and digital technologies into the educational process;
- promotes the popularization of best practices in educational and methodological activities;
- Makes proposals to the University Council on issues within its competence.

4.26.The Faculty Council is a council that, within the scope of its powers, considers issues related to the educational and methodological activities of the faculty.

4.27.Faculty Council:

- discusses the educational programs implemented at the faculty and the state of educational and methodological support;
- reviews student learning outcomes, the quality of classroom activities, and monitoring results;

- discusses the activities and reports of departments on the quality of education;

- Makes decisions and recommendations to eliminate identified shortcomings and improve the quality of education.

4.28. Dean of the Faculty:

- ensures the implementation of this Policy at the faculty;
- monitors the organization of educational programs and the educational process based on established requirements;

- coordinates the activities of departments and professors;
- reviews the results of monitoring and questionnaires on the quality of education;

- studies student applications and feedback;
- Ensures the development and implementation of corrective measures for identified deficiencies.

4.29. Head of Department:

- organizes the educational, methodological, scientific and educational activities of the department;

- ensures the relevance of the content of relevant educational programs, subjects and modules;

- monitors the quality of teaching staff's classes and teaching-methodical resources;

- organizes open lessons and mutual lesson analyses;
- analyzes student learning outcomes;
- ensures compliance with academic integrity requirements;
- implements measures aimed at eliminating the identified shortcomings.

4.30. The Information Resource Center, the Center for Digital Educational Technologies, the Career Center, international relations, social and spiritual support for students, technical and economic and other service-providing structural units provide, within their competence, the necessary information, digital, social, professional, infrastructural and other services for the high-quality implementation of educational programs and the educational process.

4.31. Structural units supporting the educational process:

- ensures the availability, quality and convenience of the services provided;

- studies the opinions and appeals of students, faculty, and staff;
- regularly monitors the quality and effectiveness of services;
- takes measures to eliminate identified shortcomings and improve services;

- provides relevant information and reports in accordance with the established procedure.

4.32. The detailed tasks, powers and responsibilities of structural units supporting the educational process are determined in their approved charters, job descriptions and other internal documents.

4.33. Professors:

- organizing lessons in accordance with established learning outcomes;
- high-quality preparation and timely placement of educational and methodological and electronic educational resources;
- use student-centered teaching methods;
- assess student knowledge objectively, transparently, and based on established criteria;
- comply with academic integrity requirements;
- participation in open lessons, peer lesson analysis, and monitoring activities;
- systematically develop their pedagogical, professional and digital competencies;
- is responsible for improving its activities based on monitoring and survey results.

Learners and external stakeholders

4.34. Learners:

- active participation in the educational process;
- academic integrity and compliance with the University's internal regulations;
- express informed opinions and suggestions on the quality of education;
- participation in surveys, discussions, and activities of representative bodies;
- contributes to the internal quality assurance process through.

4.35. Alumni, employers, professional organizations, partner institutions, and other external stakeholders:

- development and updating of educational programs;
- assessment of educational outcomes and professional readiness of graduates;
- organization of student internships;
- providing suggestions on labor market needs;
- Express opinions and recommendations on improving the quality of education
- involved in the processes.

Clarification of authority and accountability

4.36. The responsible executive, partner units, deadlines, expected results and supporting evidence for the main processes in the internal quality assurance system are determined in relevant internal documents, annual plans and a responsibility matrix.

4.37. Heads of structural divisions are responsible for the implementation of the requirements of this Policy in their divisions, the completeness and reliability of the information provided, the elimination of identified shortcomings, and the effectiveness of the measures taken.

4.38. The detailed distribution of authority and responsibilities for quality assurance is determined by the charters of structural units, job descriptions, process regulations, and relevant internal documents.

5. QUALITY ASSURANCE STANDARDS IN STRATEGIC MANAGEMENT ACTIVITIES

Standard requirement

The University organizes its strategic management activities in accordance with its mission, institutional values, development priorities, the needs of stakeholders, and national and international development trends in the field of higher education. Strategic management serves to coordinate all the main areas of activity of the University on the basis of a single system of goals, ensure the effective use of available resources, and achieve the set results.

The university implements a continuous quality cycle that includes strategic planning, implementation of strategic objectives, monitoring of results, analysis of identified problems and risks, and determination of corrective measures. Strategic decisions should be based on reliable data, measurable indicators, stakeholder feedback, and monitoring results.

Strategic planning and implementation requirements

5.1. The strategic development of the university is carried out on the basis of the approved development strategy. The current development strategy of Termez State University covers the years 2025–2027.

5.2. The university's strategy is developed based on its mission, future goals, priority areas of activity, internal capabilities, external environmental requirements, and the needs and suggestions of stakeholders.

5.3. When developing the strategy, the development plans and strategic proposals of faculties, departments and other structural divisions are studied. The strategies developed by the faculties are summarized and taken into account in the formation of a single development strategy of the University.

5.4.Annual work plans of faculties, departments and other structural divisions are developed in accordance with the goals, objectives and performance indicators set out in the University's strategy.

5.5.The university strategy and its implementation define the tasks to be implemented, responsible executors, deadlines, expected results, and measurable indicators, as far as possible.

5.6.Strategic goals and objectives should be expressed in a way that is logically linked to each other, practically achievable, time-bound, and measurable.

5.7.When planning strategic tasks, the availability of the necessary human, financial, material and technical, informational and organizational resources and their availability are taken into account.

5.8.The university strategy and the plans of structural units are consistent in content. Structural units are not overloaded with activities that are not related to or duplicate strategic tasks.

Stakeholder engagement

5.9.The opinions and suggestions of faculty, staff, students, alumni, employers, partner organizations, and other stakeholders are explored in formulating strategic goals and priorities.

5.10.Stakeholder input may be obtained through surveys, meetings, discussions, board meetings, collaborative events, written submissions, and other acceptable forms.

5.11.Proposals received from stakeholders are analyzed for their compliance with strategic goals, feasibility, required resources, and expected impact on the development of the University.

5.12.Not all stakeholder proposals will automatically be included in the strategy. Important proposals accepted or rejected should be justified in appropriate discussions and decisions.

Powers and responsibilities

5.13.The rector of the university exercises general leadership over the effective functioning of the strategic management system, the creation of the necessary organizational conditions for the implementation of the development strategy, and the achievement of the set results.

5.14.The University Council considers the development strategy, the status of its implementation, the dynamics of strategic indicators and important issues related to improvement, and makes decisions within its powers.

5.15.The vice-rector responsible for this area will lead strategic planning, coordination of the implementation of strategic tasks, analysis of monitoring results, and preparation of relevant management decisions.

5.16.The Strategic Development and Transformation Department coordinates the processes of developing and updating the University's strategy, summarizes strategic proposals from faculties and other structural divisions, monitors the implementation of strategic indicators, and prepares summarized reports.

5.17.Vice-rectors responsible for relevant areas of activity organize the implementation of the tasks set out in the strategy for their blocks, monitor the implementation status, and provide the necessary information to the Strategic Development and Transformation Department.

5.18.Faculty deans, department heads, and heads of other structural divisions are responsible for the implementation of the strategic tasks assigned to them, the formation of supporting evidence, and the timely submission of reporting data.

5.19.The Education Quality Control Department studies, within its competence, the implementation of the parts of the strategic tasks related to the quality of education and the internal quality assurance system, analyzes the monitoring results, and makes proposals for improvement.

5.20.Each structural unit is responsible for the accuracy, completeness, and current status of the information, indicators, and supporting documents it provides.

Monitoring strategic tasks

5.21.The implementation of the tasks set out in the university strategy and its applications is monitored on a semi-annual and annual basis.

5.22.The monitoring process is carried out under the leadership of the vice-rector responsible for this area, with the participation of employees of the Strategic Development and Transformation Department and persons responsible for relevant areas of activity.

5.23.During monitoring, the Strategic Development and Transformation Department requires information and supporting evidence from relevant faculty deans, department heads, and heads of other structural divisions on the status of implementation of the tasks set out in the strategy applications.

5.24.The fulfillment of a strategic task is assessed not only on the basis of verbal or general information, but also on the basis of an order, protocol, report, contract, statistical information, information system record, publication, photograph, or other verifiable evidence.

5.25.During the monitoring process, the status of each strategic task can be classified as completed, partially completed, in progress, not completed, or a task that has lost its significance, based on its content.

5.26.The status "Completed" is used only when the task content and expected result have been fully implemented and there is supporting evidence. A status of only preparation or work started is not considered a completed result.

5.27.When assessing the implementation of strategic objectives, not only the event itself is taken into account, but also its impact on the expected result, the sustainability of the result, and its contribution to the development of the University.

5.28.Evaluating the performance of professors, department heads, and faculty deans based on KPIs can be one of the sources of information for strategic monitoring. However, evaluating the implementation of the University's strategy is not limited to KPI results alone.

Strategic risk management

5.29.The University takes measures to identify and assess organizational, financial, academic, personnel, technological, legal, and other risks that may negatively impact the achievement of strategic goals.

5.30.Strategic risks are recorded based on monitoring results, reports from structural units, stakeholder opinions, changes in the external environment, and issues identified at management meetings.

5.31.In order to systematically manage strategic risks, a risk register should be maintained that reflects their content, probability of occurrence, possible impact, preventive measures, and responsible executors.

5.32.Depending on the level of risk, a management measure is determined to prevent it, reduce its impact, share it with another entity, or accept it with justification.

Review and improve monitoring results

5.33.The results of strategic monitoring are summarized by the vice-rector responsible for this area and the Department of Strategic Development and Transformation.

5.34.The results of monitoring are reviewed, as necessary, at meetings under the rector, at the University Council, or in other relevant collegial bodies.

5.35.When reviewing monitoring results, progress made, unfulfilled or partially fulfilled tasks, reasons for delays, existing risks, resource shortages, and improvement needs are analyzed.

5.36.In cases where a strategic task is not completed or the set result is not achieved, the cause of the problem is identified and a written assignment, additional action plan, or other corrective measures are assigned to the responsible unit.

5.37.Corrective actions indicate the task to be performed, the responsible executor, the deadline for completion, the necessary resources, the expected result, and evidence confirming the implementation.

5.38.The implementation of the identified corrective actions will be reassessed during the next monitoring period. Additional management decisions may be taken for unfulfilled tasks.

5.39.Effectively implemented strategic initiatives, innovative management solutions, and best practices are disseminated for application in other faculties and structural divisions.

Strategic Activity Report

5.40.Semi-annual data and an annual summary report on the university's strategic activities are prepared by the Strategic Development and Transformation Department.

5.41.The annual report reflects the status of implementation of strategic goals and objectives, the dynamics of performance indicators, achievements, unfulfilled tasks, existing problems and risks, corrective measures taken, and priority areas for the next period.

5.42.The report on strategic activities is submitted to the University management and, as necessary, discussed at the University Council.

5.43.Results of public importance regarding the strategic development of the university may be announced through the official website and other official information channels.

Strategy review

5.44.The university strategy is subject to a comprehensive review at the end of the specified period. The strategy may be amended ahead of schedule in the event of changes in legislation, state policy, organizational structure, financial capabilities, labor market, technologies, or other significant external and internal factors.

5.45.When revising the strategy, monitoring results, dynamics of strategic indicators, reports from faculties and structural divisions, opinions of stakeholders, external evaluation and accreditation conclusions, and best national and international practices are taken into account.

5.46.Amendments and additions to the strategy are made in accordance with the procedure established for its initial approval.

Assessing the implementation of standards

5.47.The implementation of internal quality assurance standards in strategic management activities is assessed using a 100-point evaluation matrix developed based on the requirements of this chapter.

OFFICIAL TRANSLATION

5.48. The assessment takes into account not only the existence of strategic documents, but also their practical application, the fulfillment of set goals, the systematic nature of monitoring, the reliability of evidence, the effectiveness of corrective measures, and the results achieved.

5.49. The following groups of criteria are used to evaluate strategic management activities:

T/r	Evaluation criteria group	Maximum score
1	Clarity of mission, strategic goals, and priorities	12
2	Compliance with the plans of faculties and structural divisions	10
3	Justification of strategic objectives, indicators, deadlines and resources	15
4	Stakeholder participation in strategic planning	8
5	Authority, responsibility and coordination between structural units	10
6	Monitoring and evidence management of strategic tasks	20
7	Identifying and managing strategic risks	10
8	Corrective actions, reporting and continuous improvement	15
	Total	100

5.50. The expert assessment for each criterion is set within the maximum score limit set for the criterion and is justified by relevant documents, information, or other verifiable evidence.

5.51. The evaluation result is interpreted as follows:

Total points	Result
86–100	Fully compliant with standard requirements
71–85	In accordance with the standard requirements
51–70	Partially meets standard requirements, significant improvement needed
0–50	Not in accordance with standard requirements

5.52. Providing unreliable information, deliberately distorting monitoring results, or marking the implementation of strategic tasks as “completed” without evidence is considered a critical non-compliance. In such cases, a conclusion of full compliance with the standard will not be given, regardless of the overall score.

5.53. The implementation of these standards will be assessed based on Appendix 5.1 - "Internal quality assurance assessment form in strategic management activities." An action plan will be developed for any discrepancies identified as a result of the assessment, indicating responsible executors and deadlines.

6. QUALITY ASSURANCE STANDARDS IN TEACHING AND EDUCATIONAL ACTIVITIES

6.1. Internal quality assurance standards in the development and approval of educational programs.

Standard requirement

The University establishes a clear, consistent and evidence-based procedure for the development, discussion, examination, approval and implementation of educational programs. Educational programs are formed in accordance with the mission and strategic goals of the University, current state educational standards, the National Qualifications Framework, qualification requirements, professional standards, labor market needs, trends in the development of science and technology, and substantiated proposals from interested parties.

The quality of an educational program is determined not only by the availability of its documentation, but also by the clarity of program objectives, the measurement of expected learning outcomes, the logical structure of subjects and modules, the appropriateness of teaching and assessment methods, the adequacy of resources, and the degree of preparation of the graduate for professional activity.

Requirements for developing a training program

6.1.1. The university organizes the procedures for developing, discussing, examining, approving, registering, and implementing each educational program based on internal regulatory documents.

6.1.2. A curriculum consists of a set of interrelated documents that define the goals of education in a specific field of study or specialty, the description of the graduate's qualifications, the expected learning outcomes, the structure of the curriculum, the composition of subjects and modules, teaching, learning and assessment methods, forms of practical training, and the necessary resources.

6.1.3. Before developing a new educational program, the need for the relevant educational field or specialty, the state of the labor market, employer demand, existing professional standards, trends in the development of science

and technology, and the University's capabilities to implement this program are analyzed.

6.1.4. The educational program is developed by the relevant department and faculty with the participation of leading professors, employers, industry experts, students, and, if necessary, graduates.

6.1.5. Stakeholder opinions and suggestions are explored through questionnaires, meetings, discussions, interviews, written proposals, expert opinions, practice results, and participation in relevant councils.

6.1.6. Employer and student representatives are invited to department meetings and Faculty Council meetings, where the educational program, qualification requirements, working curriculum, elective subjects, professional and special subjects are reviewed.

The submitted proposals, their acceptance, partial acceptance, or justified non-acceptance, are reflected in the relevant minutes or other supporting documents.

Educational program goals and outcomes

6.1.7. The goals of the educational program should be consistent with the mission, strategic goals, and academic profile of the University, reflect the content of the educational field or specialty, and be oriented towards the future professional and social activities of the graduate.

6.1.8. The expected learning outcomes of the educational program are expressed in a clear, understandable, measurable and evaluable form.

Learning outcomes are aligned with the program objectives, the graduate qualification profile, the appropriate level of the National Qualifications Framework, state educational standards, qualification requirements, professional standards, and the knowledge, skills, and competencies to be developed.

6.1.9. The academic degree and qualification awarded to the graduate upon successful completion of the educational program are clearly indicated and ensure compliance with the appropriate level of the National Qualifications Framework.

International and joint educational programs also take into account relevant international educational standards, qualification frameworks, and partner organization requirements.

Content and structure of the educational program

6.1.10. The subjects and modules in the curriculum are structured in a way that is interconnected in content, has a logical sequence, and gradually increases in complexity.

6.1.11.Subjects and modules should serve to achieve the expected results of the educational program, ensure the harmony of theoretical knowledge and practical training, develop professional competencies, and form independent, critical, and creative thinking of students.

6.1.12.The relationship between the expected outcomes of the educational program and the learning outcomes of subjects and modules is determined through a correspondence matrix.

Each subject or module should contribute to the achievement of at least one or more program learning outcomes, and each program learning outcome should be formed through related subjects, modules, practices, or other learning activities.

6.1.13.The working curriculum determines the mandatory and elective subjects, their sequence, credits, study period, classroom training, independent study, internships, and other types of educational activities.

6.1.14.Elective subjects are formed taking into account students' interests, professional goals, individual educational trajectory, employer offers, and the future development of the educational field.

6.1.15.The total student workload is defined in credits, encompassing all activities necessary to achieve the goals and expected outcomes of the educational program.

In the credit-module system, one credit represents an average of 25–30 academic hours of total study load. The volume of classroom training and independent study is justified based on the nature of the subject or module, the stage of education, and the expected learning outcomes.

6.1.16.The educational program provides students with the opportunity to choose elective subjects, form an individual educational trajectory, participate in academic mobility, and recognize previously acquired educational outcomes and credits in accordance with the established procedure.

6.1.17.The educational program includes laboratories, seminars and practical training, projects, internships, research work or other forms of activity specific to the relevant field, which allow the application of theoretical knowledge in practical activities.

6.1.18.The content, forms, and expected outcomes of practical training are developed taking into account suggestions from employers, internship sites, and industry experts.

Compliance of training and assessment

6.1.19.The teaching, learning, and assessment methods used in the curriculum should be consistent with the expected learning outcomes.

6.1.20.Teaching methods, independent learning tasks, and assessment forms for each subject or module should allow for the development and assessment of the knowledge, skills, and competencies that students need to develop.

Detailed requirements for student-centered teaching and assessment are set out in Section 6.2 of this Policy.

Assessing resource adequacy

6.1.21.Before approving the educational program, the adequacy of the necessary teaching staff, educational and methodological and scientific literature, electronic resources, auditoriums, laboratories, equipment, information and communication infrastructure, practice bases, and support services for its implementation is assessed.

6.1.22.The availability of the necessary resources to implement the educational program is assessed not only on the basis of documents, but also in terms of their readiness for practical use, technical condition, available capacity, and compliance with the number of students.

6.1.23.It is not allowed to implement an educational program that does not have the necessary professors, teachers, material and technical base, practice bases, or other important resources without justification.

Discussion, examination and approval procedure

6.1.24.The development and approval of the educational program includes the stages of needs analysis, setting goals and outcomes, formulating the curriculum and subject content, assessing resources, discussing with stakeholders, conducting an examination, and approving it in the relevant councils.

6.1.25.The draft educational program is initially reviewed at a meeting of the relevant department. The department makes a decision on the scientific, professional and methodological basis of the program.

6.1.26.The project proposed by the department will be discussed at the Faculty Council. Employers, students, representatives of the Educational and Methodological Department and the Education Quality Control Department will be invited to the discussion.

6.1.27.The educational program approved by the Faculty Council is reviewed by the Academic and Methodological Council in terms of normative, content, and methodology.

6.1.28.The educational program and related documents within the competence of the University are reviewed and approved by the University Council.

Documents that are required to be approved or agreed upon in a different manner by the legislation shall be formalized in the appropriate manner.

6.1.29.If necessary, the draft educational program undergoes external review with the participation of professors and teachers from other higher education or scientific organizations, employers, professional organizations, and independent experts.

6.1.30.International and joint educational programs are developed in coordination with partner organizations, foreign experts, and relevant international requirements.

Documentation and version control

6.1.31.Each stage of development, discussion, examination and approval of the educational program is documented with protocols, expert opinions, proposals and other supporting documents.

6.1.32.The educational and methodological support of the approved educational program includes information on qualification requirements, working curriculum, program objectives and learning outcomes, subject and module descriptions, syllabi, elective subject catalog, correspondence matrix, internship programs, assessment methods, and necessary resources.

6.1.33.The approved educational program and its constituent documents are registered and stored in the Educational and Methodological Department, the relevant faculty and department in accordance with the established procedure.

6.1.34.The date of approval, validity period and revision of the educational program documents shall be clearly indicated. The current and previous revisions shall be distinguished, changes made shall be recorded, and the use of outdated documents in the educational process shall not be allowed.

6.1.35.Accurate and up-to-date information about the approved educational program is published on the official website of the University in accordance with public information standards.

Powers and responsibilities

6.1.36.The head of the department is responsible for the content, goals and learning outcomes of the educational program, the composition of subjects, its compliance with the professional direction, and its development with the participation of relevant professors and teachers and stakeholders.

6.1.37.The dean of the faculty coordinates the processes of developing, discussing, involving stakeholders, and reviewing the educational program within the faculty.

6.1.38.The Educational and Methodological Department reviews the compliance of the educational program and its constituent documents with current regulatory requirements, academic regulations and approved forms, and coordinates the process of registering and storing documents.

6.1.39.The Education Quality Control Department examines the compliance of the educational program with quality requirements, provides conclusions and suggestions on stakeholder participation, educational outcomes, assessment methods, and resource issues.

6.1.40.The Academic and Methodological Council reviews the scientific, methodological and academic soundness of the educational program and makes appropriate recommendations to the University Council.

6.1.41.Each structural unit participating in the development and approval of the educational program is responsible for the accuracy, completeness, and timely formalization of the information and documents it provides.

Monitoring and improvement

6.1.42.Before the educational program is implemented, it undergoes final control to ensure that it is equipped with approved documents, established learning outcomes, faculty, and necessary resources.

6.1.43.Recommendations or written instructions are given to the relevant department and faculty regarding inconsistencies identified during the development and approval of the educational program to eliminate them.

6.1.44.The issue of approving or implementing the training program may be postponed for further consideration until the identified deficiencies are eliminated.

6.1.45.Significant changes to the educational program are discussed and approved in accordance with the procedure established for the initial development and approval of the program.

The detailed procedure for continuous monitoring, periodic evaluation and review of educational programs is set out in Section 6.5 of this Policy.

Assessing the implementation of standards

6.1.46.The implementation of standards in the field of development and approval of educational programs is assessed based on a 100-point evaluation system.

6.1.47.The evaluation is not limited to checking the existence of training program documents. It also considers the consistency of the documents, the quality of the content, the real participation of stakeholders, the availability of resources, the consistency of the approval process, and the reliability of the evidence.

OFFICIAL TRANSLATION

T/r	Evaluation criteria group	Maximum score	From this:
1	The need for an educational program and its strategic and normative relevance	10	-
2	Educational program objectives, qualification descriptions, and expected learning outcomes	15	-
3	Subjects, modules, and content integrity of the curriculum	15	-
4	Correspondence matrix between learning outcomes and subjects	10	-
5	Credits, course load, electives, and individual learning trajectory	10	-
6	Alignment of teaching, learning, and assessment methods with learning outcomes	10	-
7	Practical training and provision of necessary resources	10	-
8	Stakeholder engagement and quality of expertise	10	-
9	Discussion, approval, documentation, and version control	10	-
	Total	100	-

6.1.48. The expert assessment for each criterion is set within the appropriate maximum score range and is justified by the educational program, curriculum, syllabus, correspondence matrix, protocol, expert opinion, or other verifiable evidence.

6.1.49. The evaluation result is interpreted as follows:

Total points	Result
86–100	Fully compliant with standard requirements
71–85	In accordance with the standard requirements
51–70	Partially meets standard requirements, significant improvement needed
0–50	Not in accordance with standard requirements

6.1.50. Critical non-compliance is the implementation of the educational program based on unapproved documents, the lack of defined learning

outcomes, the lack of necessary resources, the involvement of stakeholders, or the falsification of examination results.

In this case, a conclusion of full compliance with the standard is not given, regardless of the high overall score.

6.1.51. The following tools are used to assess the implementation of these standards:

Appendix 6.1.1 - Form for assessing the quality of development and approval of the educational program;

Appendix 6.1.2 - Syllabus (Science Program) Quality Assessment Form.

As a result of the assessment, responsible executors, implementation deadlines, and measures with expected results are determined for the identified non-conformities.

6.2. Internal quality assurance standards in student-centered education, training and assessment

Standard requirement

The university organizes the educational process based on an approach that recognizes that the student is not a passive recipient of knowledge, but an active participant in achieving educational outcomes, an independent decision-maker, and a subject responsible for his or her own academic development.

Student-centered education involves taking into account the needs, level of preparation, individual characteristics, and academic capabilities of students, communicating educational goals to them in a way that is understandable, using active teaching methods, supporting independent learning, providing fair assessment, and providing timely and meaningful recommendations.

The University ensures that the principles of transparency, impartiality, equality, academic freedom, inclusiveness, mutual respect and academic integrity are adhered to in the teaching and assessment processes. Student opinions, applications, assessment results and learning experiences are used as important evidence for improving the educational process.

The role of the student in the educational process and academic rights

6.2.1. As an active participant in the educational process, the student has the right to receive full information in advance about educational goals, expected outcomes, teaching methods, assignments, assessment criteria, and academic requirements.

6.2.2. The university provides students with the opportunity to ask questions, express opinions, participate in academic discussions, make independent decisions, choose elective subjects, and make proposals for

improving the educational process in accordance with the established procedure.

6.2.3.A student-centered approach does not mean using the same teaching method for all students. The professor-teacher uses different pedagogical approaches based on the students' preparation, the nature of the subject, and the learning outcomes.

6.2.4.For students with special educational needs, reasonable accommodation measures, accessible information formats, and necessary pedagogical support are provided without reducing the essence of academic requirements.

6.2.5.The relationship between professors and students is based on the principles of mutual respect, impartiality, recognition of individual dignity, and non-discrimination.

6.2.6.Unequal treatment of a student based on his/her gender, language, social status, disability, views, academic results, or other non-educational characteristics is not permitted.

6.2.7.A student's reasoned criticism, request, appeal, or opinion in a questionnaire should not negatively affect his/her academic performance or status at the University.

Academic preparation for the semester and credit week

6.2.8.Before the start of each semester at the university, a credit week is organized based on the working curriculum and academic calendar.

6.2.9.The purpose of Credit Week is to familiarize students with the content of the new semester, subjects and modules, independent learning, elective options, forms of control, assessment criteria, academic integrity, and application procedures.

6.2.10.Credit week for first-year students is organized in a comprehensive manner with the participation of the faculty, department, Registrar's Office, Information Resource Center, tutors, professors, and other relevant departments.

6.2.11.First-year students are explained the structure of the University, the credit-module system, the HEMIS information system, the working curriculum, elective subjects, electronic resources, assessment, academic integrity, internal procedures, and the application and appeal procedures.

6.2.12.Students of the second and higher levels are explained the purpose, learning outcomes, sequence of topics, independent learning assignments, types of control, distribution of points, and evaluation criteria by the professor-teacher leading the subject or module.

6.2.13.The information provided during the credit week must be consistent with the subject syllabus and other approved academic documents.

6.2.14.Credit Week is not limited to just an informational event. Students are given the opportunity to ask questions, get clarification on unclear requirements, and receive advice on their academic choices.

Elective subjects and individual academic direction

6.2.15.The university provides students with the opportunity to form an individual academic direction by choosing elective subjects within the framework of the approved educational program and working curriculum.

6.2.16.Registration for elective subjects is organized by the Registrar's Office through the HEMIS information system.

6.2.17.Before the selection process, the student is provided with clear information about the subject name, purpose, content, expected learning outcomes, competencies, credit volume, training period, and initial requirements.

6.2.18.Basic information about the qualifications, scientific and pedagogical experience, and professional activities of the professor who is scheduled to teach the subject may be provided to help the student make an informed decision about the subject of choice.

6.2.19.The provision of information about a professor does not give the student the right to choose a particular professor.

6.2.20.The student's decision on the elective subject is recorded in the HEMIS information system within the specified period and serves as the basis for organizing the educational process.

6.2.21.Changing the elective subject is only possible within the deadlines and grounds specified in the Academic Regulations.

Independent learning and pedagogical process

6.2.22.Independent learning is organized in a way that is focused on achieving the expected outcomes of a subject or module, is content-based, and develops the student's independent thinking, research, and application of knowledge in practice.

6.2.23.The content, scope, completion date, submission format, evaluation criteria, and resources used for independent learning assignments are determined in the subject syllabus.

6.2.24.Independent learning tasks should not be disproportionate to the time allocated for the subject, repetitive, or focused solely on the mechanical transmission of information.

6.2.25.The professor-teacher advises students on the completion of independent learning assignments, explains errors and shortcomings in the assignments, and provides recommendations for their elimination.

6.2.26.Students' independent, scientific, creative, and practical activities are supported through research projects, practical assignments, seminars, competitions, conferences, circles, and activities aimed at solving professional problems.

6.2.27.The professor-teacher selects teaching methods based on the nature of the subject or module, the readiness of the students, and the expected learning outcomes.

6.2.28.In the educational process, methods such as problem-based learning, discussion, case studies, projects, laboratory activities, simulation, research, team assignments, digital and blended learning are used according to pedagogical needs.

6.2.29.The use of digital technologies is not an independent indicator of educational quality. They are considered effective when they contribute to the achievement of learning outcomes, student engagement, and understanding of the material.

General requirements for assessing student knowledge

6.2.30.Students' knowledge, skills, and competencies are assessed based on the level of achievement of the expected learning outcomes in a subject or module.

6.2.31.Assessment criteria are determined in advance, explained to students, and applied equally and consistently to all students.

6.2.32.Assessment tasks should not be limited to simple repetition of subject content, but should also determine the ability to analyze, apply, solve problems, draw conclusions, and perform professional activities when necessary.

6.2.33.The assessment form can be organized in a written, oral, test, project, laboratory work, practical assignment, essay, case, portfolio, or other reasonable form, depending on the nature of the subject and learning outcomes.

6.2.34.In cases where a single assessment form is insufficient to identify all learning outcomes, several complementary assessment methods are used.

6.2.35.At the university, student achievement is assessed on a 100-point system. 20 points are allocated for current subject control, 30 points for intermediate control, and 50 points for final control.

6.2.36.Independent learning results are assessed separately in the current and midterm exams. Independent learning assignments are awarded 8

points in the current exam and 12 points in the midterm exam, for a total of 20 points.

6.2.37. To be eligible for the final exam, a student must score at least 12 points in the current exam and at least 18 points in the midterm exam.

6.2.38. To achieve a positive result in the subject, the student must score at least 60 points in total, including at least 30 points out of the 50 points allocated for the final examination.

6.2.39. A student who scores less than 30 points on the final exam will not be assessed positively in the subject, even if he or she scores enough points on the current and midterm exams.

Independence and reliability of final control

6.2.40. Final control tasks are developed in accordance with the subject syllabus, topics covered, and expected learning outcomes.

6.2.41. Final control assignments are discussed at the relevant department meeting and are examined for content, accuracy, level of complexity, and compliance with learning outcomes.

6.2.42. The type of final examination, questionnaire or assignments, and their evaluation criteria will be brought to the attention of students at least one month before the examination.

6.2.43. The final examination is conducted and evaluated by a professor who has not taught the subject to the relevant group.

6.2.44. The final control schedule, control form, auditorium, evaluating professor, responsible persons, and the composition of the appeal committee for each semester are formalized by order of the rector.

6.2.45. Final examinations are held in classrooms with video surveillance. Unjustified influence on the assessment process, conflicts of interest, academic dishonesty, and the creation of unequal conditions for students are not allowed.

6.2.46. Written records, minutes, and video recordings of the final inspection are stored in accordance with the established procedure for at least one year.

6.2.47. When storing assessment materials, their integrity, confidentiality, traceability, and prevention of unauthorized modification are ensured.

Recording and explaining assessment results

6.2.48. The results of current, intermediate, and independent learning are entered into the HEMIS information system by the professor who conducted the lessons in the subject within the established deadlines.

6.2.49.The results of the final examination are entered into the HEMIS information system by the professor who conducted and evaluated the final examination.

6.2.50.Assessment results should be open to students from the moment they are announced and they should have the opportunity to familiarize themselves with their results.

6.2.51.Unjustified changes, concealment, deliberate late entry of grades, or entry of incorrect information into the system are not permitted.

6.2.52.Based on the assessment results, the professor-teacher provides the student with clear recommendations on the results achieved, the shortcomings made, and ways to improve their educational outcomes.

Appeal and grade correction

6.2.53.If a student is dissatisfied with the assessment result or the non-compliance with the established procedure during the assessment process, he or she has the right to file an appeal with the Registrar's Office within 24 hours of the announcement of the result.

6.2.54.The student has the right to participate in the consideration of his appeal, provide explanations, and express his opinion based on relevant materials.

6.2.55.The Appeals Committee will review the appeal within 48 hours based on the written work, evaluation criteria, video recording, and other relevant evidence.

6.2.56.The decision of the appeals committee must be reasoned and communicated to the student on the same day the decision is made.

6.2.57.The activities of the Appeals Commission ensure impartiality, prevention of conflicts of interest, and uniform application of evaluation criteria.

6.2.58.The assessment result may be changed only in cases of a decision by the appeals committee, a technical error, or other grounds supported by relevant evidence.

6.2.59.The professor who evaluated the final examination sends a reasoned electronic request to the Vice-Rector for Academic Affairs via the HEMIS information system regarding the need to correct the grade.

6.2.60.The Vice-Rector for Academic Affairs will request the relevant documents from the Registrar's Office and review the sufficiency of the submitted grounds.

6.2.61.In cases where grade correction is permitted, the change is made by the professor who assessed the final examination. Information about the initial and new grade, the reason for the change, the date, and the responsible persons is stored in the system.

Academic Integrity and Student Appeals

6.2.62. The teaching, learning, and assessment processes are based on the principles of academic integrity.

6.2.63. Plagiarism, copying, completing assignments on behalf of another person, falsifying data, using unauthorized tools, and illegally influencing the grading process are considered academic misconduct.

6.2.64. Cases of academic misconduct are reviewed based on the University's "Code of Academic Integrity, Ethics, and Professional Responsibility," "Rules of Academic Ethics," and other relevant documents.

6.2.65. Graduation theses, master's and doctoral dissertations are checked through the official anti-plagiarism system.

6.2.66. The results of the anti-plagiarism check do not replace an expert assessment of the content, scientific value, independence, and personal contribution of the author of the work.

6.2.67. Students have the right to submit appeals, suggestions, or complaints regarding the educational process, teaching, assessment, academic relations, corruption cases, and other issues.

6.2.68. When considering applications, confidentiality, impartiality, non-infringement of the applicant, and a reasoned response are ensured.

Powers and responsibilities

6.2.69. The Vice-Rector for Academic Affairs is responsible for the overall organization of the student-centered education and assessment system, the legitimacy of final controls, and the processes for correcting assessment results.

6.2.70. The Academic and Methodological Department coordinates teaching, independent learning, assessment methods, and subject syllabi to ensure they meet academic requirements.

6.2.71. The Registrar's Office handles the processes of registering for elective courses, recording assessment results, maintaining academic records, and accepting appeal documents.

6.2.72. The Dean of the Faculty coordinates the proper organization of the credit week, academic advising, supervision processes, and appeals within the faculty.

6.2.73. The head of the department is responsible for subject syllabi, teaching and assessment methods, final control materials, lesson quality, and methodological support for professors and teachers.

6.2.74. The professor-teacher is responsible for explaining the objectives and assessment criteria of the subject, using a student-centered pedagogical

approach, objectively recording the assessment results, and providing developmental recommendations to students.

6.2.75.The Education Quality Control Department monitors classroom instruction, teaching methods, assessment processes, student satisfaction, and the academic environment.

6.2.76.The Center for Digital Educational Technologies ensures the technical stability, access control, and data security of HEMIS, video surveillance, and other information systems used in the assessment process.

Monitoring and improving the educational process

6.2.77.The effectiveness of student-centered teaching and assessment is not based on a single source of information, but on a comprehensive assessment of student questionnaires, lesson observations, academic results, assessment materials, appeals, references, and academic integrity cases.

6.2.78.At the end of each semester, a survey is conducted among students regarding subjects, teaching methods, independent learning, transparency of assessment, academic communication with the professor, and the learning environment.

6.2.79.The results of the survey are not limited to the overall average. They are analyzed by faculty, department, subject, course, and identified problem areas.

6.2.80.The quality of classroom activities is assessed through a developmental observation protocol that combines a brief pre-observation interview, recording evidence from the lesson process, and a post-lesson professional discussion.

6.2.81.The compliance of assessment tasks and criteria with learning outcomes is verified through an audit of special assessment tools.

6.2.82.The distribution of grades by subject, very high or very low results, academic debt, and when sharp differences between groups are identified, their causes are analyzed.

6.2.83.A low score does not always mean poor quality of the professor's work, and a high score does not automatically mean high quality. The results are interpreted in conjunction with the complexity of the subject, student preparation, assessment tasks, and other evidence.

6.2.84.Measures such as methodological support to the professor, discussion in the department, professional development event, redevelopment of assessment tools, or repeated monitoring are determined for deficiencies identified in monitoring.

6.2.85.The effectiveness of improvement measures will be reassessed in the next semester or during the designated monitoring period.

OFFICIAL TRANSLATION

Multi-source assessment model for standards implementation

6.2.86. The implementation of these standards is assessed based on a 100-point multi-source model for internal quality monitoring, separate from the 100-point system used to assess student learning.

6.2.87. The final score is based on five independent sets of evidence. A high score in one source does not fully compensate for a serious deficiency in another.

Evidence collection	Key aspects to be assessed	Maximum score
A. Student Learning Experience Index	Clarity of goals and criteria, academic advising, opportunity for choice, respectful and inclusive environment, support for independent learning	18
B. Pedagogical practice and student engagement	The relevance of teaching methods to learning outcomes, active participation, critical thinking, pedagogical dialogue and developmental recommendations	22
C. Evaluation design, objectivity, and follow-up	Quality of assessment tasks, transparency of criteria, independence of final control, expertise, video surveillance and traces in HEMIS	25
D. Academic performance and equal opportunity analysis	Achievement of educational outcomes, grade distribution, academic debt, differences between groups, and effectiveness of adjustments	15
E. Student Rights, Academic Integrity, and Improvement	Appeals, grade corrections, appeals, academic integrity, corrective measures, and re-monitoring	20
	Total	100

A. Student's educational experience index - 18 points

Indicator	Score
Clear communication of subject objectives and learning outcomes to students	4

Equality of assessment conditions for different groups	3
Total	15

E. Student Rights, Integrity, and Improvement - 20 points

Indicator	Score
Timely and impartial consideration of appeals	4
Full documentation of the grade correction process	4
Identification and review of academic integrity cases	4
Protecting the student who applied from harassment	3
Determination of measures and reassessment as a result of monitoring	5
Total	20

Interpretation of results

6.2.88. The results for this section are interpreted based on the following special scale:

Total points	Quality level
90–100	The student-centered system is highly developed and stable.
75–89	The system is working as required, but some areas need to be developed
60–74	The system is partially formed, significant corrective actions are required
0–59	The system is not working well enough and needs comprehensive improvement.

6.2.89. A high level of compliance with this standard will not be awarded, regardless of the overall score, if any of the following conditions are identified:

- hiding assessment criteria from students;
- the instructor's final assessment of their group's supervision;
- changing grades without evidence;
- limitation of the right to appeal;
- harassment of a student due to his/her appeal;
- deliberately concealing instances of academic dishonesty;
- Conducting the final inspection process without mandatory video surveillance.

Various forms of assessment tools for this section

This chapter uses the following tools, which differ in function and form, rather than simple inspection forms of the same type:

Appendix 6.2.1 - Electronic questionnaire "Student Educational Experience Index". This form will consist of a 5-point scale, open-ended questions, analysis across subjects and courses, and an anonymous results panel.

Appendix 6.2.2 - "Pedagogical Observation and Professional Communication Protocol". It consists of three parts: pre-lesson goal setting, in-lesson evidence recording, and post-lesson reflective discussion. It prioritizes observed pedagogical evidence and agreed-upon developmental measures over simple scoring.

Appendix 6.2.3 - "Audit card for the quality of assessment tools and compliance with learning outcomes". This card uses a special matrix that

indicates which learning outcome each final task assesses, at what level of complexity, and by what criteria.

Appendix 6.2.4 - “Science Results Moderation and Deviation Analysis Sheet”.It displays the distribution of grades, differences between groups, very high or low results, academic debt, and possible causes through diagrams and analytical explanations.

Appendix 6.2.5 - “Appeal and Grade Change Tracking Log”.It records the time the appeal was received, the evidence, the commission's decision, the change in HEMIS, and the date the response was given to the student as a single process chain.

Appendix 6.2.6 - “Education Quality Improvement Tracker”. This tool serves to track the identified problem, root cause, action, responsible party, deadline, evidence of completion, and re-monitoring results in a coherent manner.

6.3. Internal quality assurance standards in the field of student admission, monitoring of academic progress, recognition of learning outcomes and validation of qualifications

Standard requirement

The university ensures the legality, transparency, impartiality, and consistency of the processes of admitting students, registering them as students, monitoring their academic progress, recognizing study periods, subjects, and credits, organizing academic mobility, conducting final certification, and issuing documents confirming the qualifications obtained.

These processes are managed as a single academic life cycle, from the student's admission to the University until the completion of the educational program or the termination of his/her student status. Each stage of the academic life cycle must be interconnected with the relevant legal basis, official decision, electronic information and supporting documents.

The student's academic status, subjects and credits taken, GPA, academic debt, recognized learning outcomes, mobility outcomes, final certification, and graduation documents are recorded in a consistent, verifiable, and document-trackable manner.

Admission and registration of students

6.3.1.Admission to the university is carried out on the basis of current legislation, approved admission parameters, decisions of authorized state bodies, and the requirements established for the relevant educational stage and educational program.

6.3.2.The admission process adheres to the principles of equality, impartiality, openness, transparency, and non-discrimination.

6.3.3. Admission to bachelor's, master's, second specialization, foreign citizens, joint educational programs, and other educational programs available at the University is carried out based on separate procedures and criteria established for the relevant direction.

6.3.4. Admission criteria, required documents, exam forms, admission deadlines, financial conditions, and other necessary information will be published in a timely manner on the official website of the University and through the information resources of authorized state bodies.

6.3.5. After the announcement of the admission results by the authorized state body or the State Commission, the responsible secretary of the Admissions Commission prepares a draft order on the admission of students to the University.

6.3.6. The order on the admission of students is signed by the Rector of the University.

6.3.7. Information about admitted students is entered into the HEMIS information system within the deadlines set by the Registrar's Office.

6.3.8. The information entered into the electronic system must correspond to the information in the admission order, identity documents, educational program, form of education, language of education, source of funding, and other relevant documents.

6.3.9. A personal file is created for each admitted student. The completeness, reliability, confidentiality, and proper storage of documents in it are ensured.

6.3.10. In cases where a discrepancy is detected between the admission order, data in the HEMIS information system and the student's personal file, it is eliminated on the basis of the relevant legal basis and supporting documents. The reason for the correction, date and information about the responsible person who made it are recorded.

6.3.11. Newly admitted students are introduced to the University structure, credit-module system, HEMIS, Information Resource Center, assessment, elective subjects, academic integrity, application and appeal procedures during the credit week provided for in Section 6.2 of this Policy.

Monitoring the student's academic profile and progress

6.3.12. An electronic academic profile is maintained for each student, covering academic information from the time of enrollment until graduation or termination of student status.

6.3.13. The student's academic profile reflects the subjects and credits taken, current, midterm, and final exam results, GPA, academic debt,

internship results, academic mobility, recognized credits, and other decisions regarding academic status.

6.3.14. The student's academic progress is regularly monitored through the HEMIS information system and other relevant electronic systems used at the University.

6.3.15. Academic monitoring serves not only to record a student's final results, but also to identify problems in their learning early, provide academic advice, and prevent the deepening of debts.

6.3.16. A student with a declining GPA, academic debt, or problems with internship results will be provided with appropriate academic counseling and explanations by the faculty, department, tutor, or Registrar's Office.

6.3.17. A student has the right to access decisions regarding his/her GPA, credits earned, academic debt, recognized subjects, and academic status.

6.3.18. To be promoted to the next year, a student must have a GPA of at least 2.50 and have successfully completed the professional, pedagogical, or other internships specified in the working curriculum.

6.3.19. A student who does not achieve a GPA of 2.50 or who does not successfully complete the relevant internship will not be promoted to the next year.

6.3.20. The subsequent academic status of such a student will be determined based on current legislation, the University's Academic Regulations, re-studies results, and other supporting documents.

6.3.21. The decision to transfer from one course to another is made based on academic information in HEMIS, GPA, internship results, and other relevant documents.

6.3.22. A draft order on transfer from course to course is prepared by the Registrar's Office and submitted to the University Rector for signature.

Academic debt and re-study organization

6.3.23. Students with academic debt will be given the opportunity to re-learn the relevant subjects in the prescribed manner.

6.3.24. Re-study is organized on a fee basis. Its cost, registration procedure, payment terms, and evaluation conditions are announced to the student in advance.

6.3.25. Registration for re-study is carried out through a special electronic platform maintained by the Registrar's Office.

6.3.26. Separate academic groups will be formed for re-study, a class schedule will be developed, and appropriate professors will be assigned.

6.3.27. The re-study process is organized in cooperation with the Registrar's Office, relevant faculties and departments.

6.3.28. The results of the re-reading are formalized in accordance with the established procedure and entered into the HEMIS information system.

6.3.29. Based on the results of the re-study, the student's academic status will be reviewed and a draft order on transfer from one course to another or other relevant decision will be prepared by the Registrar's Office.

Decisions regarding a student's academic status

6.3.30. Draft orders on transferring a student from course to course, sending him/her to practice, granting academic leave, expelling him/her from the ranks of students, reinstating him/her to study, transferring his/her studies, and sending him/her to academic mobility are prepared by the Registrar's Office.

6.3.31. Draft orders are issued only if there is a student's application, medical report, transcript, conclusions from relevant structural units, HEMIS data, or other legal basis.

6.3.32. A decision regarding a student's academic status will not be made based on verbal instructions, unconfirmed information, or insufficient documentation.

6.3.33. The decision to grant academic leave, expel from the ranks of students, reinstate in studies, and transfer studies is communicated to the student, explaining his rights, obligations, legal consequences of the decision, and further actions to be taken.

6.3.34. Changes to a student's last name, first name, or other personal information are made only on the basis of relevant legal documents.

6.3.35. All orders regarding the student's academic status, their legal basis, and records in the electronic system must be consistent.

Transferring studies and identifying academic differences

6.3.36. The Registrar's Office will accept the transcript, academic programs, subjects studied, credits, grades, and other relevant academic documents of a student transferring from another higher education institution to TerSU.

6.3.37. The compliance of the subjects previously mastered by the student with the relevant educational program at TerSU is examined by the Registrar's Office Manager and the relevant department head with the participation of the student.

6.3.38. When comparing subjects, not only their name but also their purpose, content, topics, expected learning outcomes, credit volume, total workload, stage of training, and student learning outcomes are taken into account.

6.3.39.The fact that the names of a science are the same cannot be the sole basis for automatic recognition, and the fact that the names are different cannot be the sole basis for non-recognition.

6.3.40.Academic differences are determined based on an analysis of the content consistency of subjects and learning outcomes and are formalized in writing.

6.3.41.The student will be provided with clear information about recognized subjects, identified academic differences, deadlines for their elimination, payment terms, and assessment procedures.

6.3.42.The decision to recognize subjects or designate them as academic distinctions must be supported by verifiable academic documents and a reasoned conclusion.

Academic mobility and credit recognition

6.3.43.Academic mobility is carried out on the basis of current legislation, internal documents of the University, and agreements concluded with partner higher education institutions.

6.3.44.Before a student is sent on academic mobility, a Learning Agreement is drawn up between TerDU and the receiving higher education institution, covering the subjects to be mastered, learning outcomes, and credits.

6.3.45.The Learning Agreement serves as the basis for the recognition of the subjects and credits acquired by the student during the mobility period upon his/her return.

6.3.46.After the mobility period is over, the transcript and other academic documents provided by the receiving higher education institution will be reviewed by the Registrar's Office.

6.3.47.Subjects, grades, and credits acquired in accordance with the Learning Agreement are entered into the HEMIS information system by the Registrar's Office managers.

6.3.48.In cases where there are subjects not provided for in the Learning Agreement or that differ from those specified therein, the issue of their recognition will be considered by the Registrar's Office and the relevant department based on the content of the learning outcomes and credits.

6.3.49.It is not allowed to unjustifiably not recognize previously agreed and successfully mastered subjects based on the Learning Agreement or to force the student to retake these subjects.

6.3.50.Official recognition of a diploma or other qualification document obtained outside the Republic of Uzbekistan on the territory of the country is carried out by an authorized state body.

6.3.51. The university reviews a person's study periods, subjects, and credits within its jurisdiction based on the relevant decision or document of the authorized state body.

Completion of the educational program and final certification

6.3.52. To complete the educational program, a student must successfully complete all subjects, modules, internships, and other academic requirements specified in the working curriculum and accumulate the required credits.

6.3.53. A graduate's admission to final certification is checked based on his/her academic profile, acquired credits, academic debt, internship results, and fulfillment of other mandatory requirements.

6.3.54. Final certification for undergraduate educational programs is carried out in the form of passing the state certification exam or preparing and defending a graduation thesis, as determined by the relevant educational program and working curriculum.

6.3.55. The form of final certification is determined based on the nature of the educational program, the qualification requirements for the graduate, and the working curriculum.

6.3.56. The activities of the final state attestation commission ensure impartiality, transparency, prevention of conflicts of interest, academic integrity, and equal conditions for all graduates.

6.3.57. Completion of the master's degree program is achieved through the preparation and defense of a master's thesis.

6.3.58. Master's theses are defended at leading enterprises and organizations of the republic where the master's student has completed an internship or conducted research.

6.3.59. When defending master's theses in enterprises and organizations, appropriate organizational conditions, participation of industry experts, discussion of the practical significance of the results, and impartiality and formalization of the process are ensured.

6.3.60. Before graduation theses and master's theses are recommended for defense, they are ensured to meet established requirements, have academic integrity, and have passed the official anti-plagiarism system.

6.3.61. The results of the anti-plagiarism system do not replace expert opinion on the scientific quality, independence, content, and personal contribution of the work.

Qualification confirmation and academic document processing

6.3.62. A graduate who successfully completes the educational program and passes the final certification is awarded the appropriate academic degree and qualification.

6.3.63.The graduate will be awarded a state-standard diploma and its supplement, formalized in Uzbek and English.

6.3.64.The diploma supplement reflects information about the educational program, subjects, credits, assessment results, academic level, and qualifications that the graduate has mastered.

6.3.65.The issuance of a diploma and diploma supplement is based on information from the HEMIS information system, the decision of the Final State Attestation Commission, the graduation order, and other supporting documents.

6.3.66.The information in the diploma and its appendix is cross-checked with electronic and documentary sources before issuance.

6.3.67.It is not allowed to issue a diploma based on information that does not correspond to the supporting documents, is incomplete, or is incorrect.

6.3.68.The Registrar's Office is responsible for publishing, maintaining records, storing, and issuing diplomas to graduates.

6.3.69.The status of the diploma and its appendix being handed over to the graduate is recorded in the appropriate journal or electronic information system.

6.3.70.The security, accountability, and protection from unauthorized access of diploma forms, electronic data, and submission records are ensured.

6.3.71.A student transferring to another higher education institution will be provided with a transcript reflecting the subjects, credits, and assessment results they have completed by the Registrar's Office.

6.3.72.The academic information on the transcript must fully correspond to the information in the HEMIS information system and supporting academic documents.

6.3.73.Falsifying academic documents, unreasonably altering grades and credits, or providing false information is considered a critical non-compliance and will result in appropriate liability.

Powers and responsibilities

6.3.74.The Vice-Rector for Academic Affairs oversees the overall legality, consistency, and coordination of processes related to the academic life cycle of students.

6.3.75.The executive secretary of the admissions committee is responsible for the timely and accurate preparation of draft orders on the admission of students based on the admission results.

6.3.76.The Registrar's Office processes the entry of student information into HEMIS, maintenance of academic records, transfer from course to course,

re-enrollment, student status orders, credit recognition, and issuance of transcripts and diplomas.

6.3.77.The Dean of the Faculty coordinates processes related to students' academic development, internship results, academic debt, and continuing education at the faculty level.

6.3.78.The head of the department provides a reasoned conclusion on the comparison of subject content, identification of academic differences, recognition of credits, and compliance of the thesis with the relevant academic requirements.

6.3.79.The International Relations Department coordinates academic mobility programs and helps ensure the formalization of Learning Agreements with relevant parties.

6.3.80.The Educational and Methodological Department monitors the normative and academic compliance of the educational program, working curriculum, academic distinctions, and final certification requirements within its competence.

6.3.81.The Education Quality Control Department monitors the transparency of processes from admission to graduation, the protection of student rights, the validity of admission decisions, and the reliability of academic documents.

6.3.82.The Center for Digital Educational Technologies ensures the stability, management of access rights, data backup, and information security of HEMIS and other related information systems.

Monitoring and improvement

6.3.83.Internal quality monitoring in this area focuses on assessing the coherence and traceability of processes from student admission to graduation.

6.3.84.The monitoring process compares admission orders, HEMIS data, personal resumes, transcripts, GPA, internship results, credit recognition decisions, final certification documents, and diploma data.

6.3.85.Academic progress monitoring analyzes cases of declining GPA, academic debt, retakes, failure to master practice, failure to progress from one course to another, and dropouts.

6.3.86.The substantive validity of decisions on the recognition of subjects and credits and their consistent application in similar situations are studied on a sample basis.

6.3.87.It is monitored that the credits of students returning from academic mobility are recognized within the established deadlines and correctly entered into the HEMIS information system.

6.3.88.Before issuing diplomas to graduates, a final compliance check is carried out between the HEMIS information system, the graduation order, the decision of the Final State Attestation Commission, and the information in the diploma appendix.

6.3.89.Student appeals, transfer and reinstatement disputes, unrecognized credits, and errors in academic records are analyzed to improve relevant processes.

6.3.90.Corrective actions are determined for identified deficiencies, indicating the responsible department, implementation period, action to be taken, and re-inspection date.

6.3.91.In cases where repeated errors are identified, it is not limited to correcting a single document. The systemic reasons in the process, information system, employee authority or internal procedures are reviewed.

Assessing the implementation of standards based on a maturity model

6.3.92.The achievement of these standards is determined by assessing the level of maturity of key checkpoints in the student's academic life cycle.

6.3.93.Each control point is rated on a scale from 0 to 4. Level 0 indicates that the process does not exist or supporting evidence is not provided, level 1 indicates that the process is implemented in isolated cases and irregularly, level 2 indicates that the process is formalized, but there are inconsistencies in its application, level 3 indicates that the process is stable and documents are consistently maintained, and level 4 indicates that the process is fully documented and its results are used to improve it.

6.3.94.The maturity level determined for each control point is converted to the corresponding maximum score based on the following formula:

Weighted score = identified maturity level ÷ 4 × maximum score of the checkpoint.

6.3.95.When determining the evaluation result, the presence of critical inconsistencies is taken into account in addition to the overall score.

Admitting a student or changing his/her status without the Rector's order, the existence of an unjustified difference between HEMIS and official orders, making an undocumented decision on the recognition of credits, unjustified non-recognition of credits acquired in accordance with the Learning Agreement, issuing a diploma to a person who has not fulfilled graduation requirements, falsifying academic information, or unauthorized disclosure of personal information are considered critical non-compliance.

OFFICIAL TRANSLATION

6.3.96. The implementation of these standards is assessed based on Appendix 6.3.1 - “Table of Assessment of Control Points along the Student's Academic Life Cycle”.

6.3.97. The assessment results are interpreted based on Appendix 6.3.2 - “Interpretation scale for the final assessment results of the student's academic life cycle”.

6.3.98. Measures are determined for non-conformities identified as a result of the assessment, indicating the responsible units, implementation deadlines, expected results, and re-monitoring date.

ANNEX 6.3.1: Table of assessment of control points along the student's academic life cycle

General information

Indicator	Information
Faculty or department being evaluated	
Evaluation period	
Date of assessment	
Number of students or documents selected for evaluation	
Evaluation committee or experts	
Responsible structural unit	

Evaluation table

Code	Checkpoint	Evaluation object	Maximum score	Calculated score	Supporting evidence	The identified situation and expert opinion
Q-1	Legality of acceptance and registration	Compatibility of mandate or admission result, rector's order, HEMIS data and personal portfolio	12			
A-1	Academic profile and data integrity	Completeness of records regarding subjects, credits, grades, GPA, internships, and the student's academic status	14			
A-2	Academic progress tracking	GPA decline, academic debt, re-studies, counseling, and	14

6.4. Quality assurance standards in the field of educational resources and academic support for students

Standard requirement

The university develops sufficient, safe, modern, user-friendly, and educationally relevant resources and academic support services to effectively implement educational programs and ensure that students achieve the expected learning outcomes.

The availability of an educational resource does not necessarily mean that its quality is assured. The quality of resources and services is assessed based on their adequacy to the needs of the student population and educational programs, their technical suitability, accessibility, practical application, and contribution to educational outcomes.

The University organizes the planning, provision, monitoring and improvement of resources and support services as an interconnected, continuous process. Student and faculty feedback, usage statistics, applications, technical status and educational program requirements are the main evidence in making management decisions.

Detailed requirements for psychological, medical, social, material, housing, spiritual and educational, sports and cultural support services provided to students are set out in Chapter 11 of this Policy.

Resource planning based on needs

6.4.1. Planning of educational resources and academic support services is carried out based on the goals of educational programs, expected learning outcomes, nature of subjects, student contingent, and teaching methods.

6.4.2.When determining resource needs, classroom training, laboratory and practical activities, independent learning, research, academic mobility, and digital learning formats are taken into account.

6.4.3.In the resource planning process, substantiated proposals from professors, teachers, students, departments, faculties, the Information Resource Center, the Registrar's Office, and other relevant structural units are studied.

6.4.4.Before implementing a new educational program or making significant changes to an existing educational program, the availability and adequacy of necessary material and technical, information, library, laboratory, and digital resources are assessed.

6.4.5.In cases where the necessary resources are not available, the implementation of the educational program is not allowed without determining a specific measure that includes the timeframe for their provision, the source of financing, and responsible executors.

6.4.6.When allocating resources, not only the request of the structural unit is taken into account, but also the number of students, type of training, available capacity, level of utilization, and expected learning outcomes.

6.4.7.In cases where multiple educational programs use the same resource, its workload, availability, and technical capabilities are planned in a way that does not cause disruption to the educational process.

Learning environment and material and technical resources

6.4.8.Each educational program must be provided with the necessary classrooms, laboratories, computer rooms, technical equipment, software, educational literature, electronic resources, and support services for its implementation.

6.4.9.The capacity, lighting, ventilation, equipment, and technical condition of classrooms should be appropriate for the type of training and the number of students.

6.4.10.Equipment for laboratory and practical classes should allow students to develop the expected professional skills.

6.4.11.Safety instructions, usage procedures, and responsible persons are established when using laboratories, computers, and other special rooms.

6.4.12.Buildings, rooms, equipment and technical means used in the educational process must meet sanitary, labor protection, fire and technical safety requirements.

6.4.13.The functionality of equipment, computers, laboratory equipment, and software is regularly checked.

6.4.14. Identified malfunctions, obsolete equipment, and software problems are recorded in the appropriate register or service documents, and measures are determined for their repair, upgrade, or replacement.

6.4.15. When it is determined that an educational resource exists but has not been used for a long time or is being used for no purpose, the reasons for this are analyzed and a management decision is made to use it effectively.

6.4.16. The schedule for using classrooms, laboratories, and technical equipment is organized in a way that is understandable and easy to use for students and faculty.

Information resource center and educational literature

6.4.17. The Information Resource Center serves to provide educational programs with educational, scientific, methodological, periodical and electronic literature and to meet the information needs of users.

6.4.18. The formation and updating of the information resource center fund is carried out based on educational programs, working curricula, subject syllabi, student contingent, and proposals from professors and teachers.

6.4.19. The availability of basic and additional literature in the sciences is regularly monitored.

6.4.20. In cases where a shortage of literature is identified, measures will be taken to purchase them, provide them in electronic form, create them by University professors, or provide them through other sources not prohibited by law.

6.4.21. In addition to the availability of literature in the database, its relevance, relevance to the content of the science, the number of copies, and its practical accessibility to users are also assessed.

6.4.22. The university is developing a system for electronic cataloging, digitization, storage, and provision of educational and scientific literature to users.

6.4.23. The use of electronic library resources is organized in accordance with the requirements of copyright, information security, and personal data protection.

6.4.24. Students and faculty will have access to the University's electronic library, national electronic library systems, and international scientific databases within the framework of existing subscription or access rights.

6.4.25. The Information Resource Center provides users with advice and practical assistance in using electronic catalogs, scientific databases, bibliographic searches, and other information resources.

6.4.26.The activities of the information resource center are evaluated not only by the size of the fund, but also by the level of its use, the satisfaction of user needs, and its contribution to the educational process.

Digital education infrastructure

6.4.27.The university uses HEMIS, LMS, electronic library, electronic platforms of the Registrar's Office, and other relevant information systems to manage academic processes, provide educational materials, record student learning, maintain academic records, and provide services.

6.4.28.Digital systems must be understandable, sustainable, and accessible to users within their capabilities.

6.4.29.Students and faculty are provided with guidance, advice, and technical support on how to use electronic systems.

6.4.30.The university will take steps to gradually digitize academic and administrative services provided to students, increasing the speed and transparency of services.

6.4.31.The accuracy, integrity, confidentiality, and protection from unauthorized changes of information in electronic systems are ensured.

6.4.32.Users' access to information systems is organized based on their personal identification and service authorizations.

6.4.33.When an employee's position or task changes, their access rights to information systems are reviewed.

6.4.34.Electronic data important to the academic process is backed up in a prescribed manner and the ability to restore after emergency interruptions is ensured.

6.4.35.Technical failures, errors, and user complaints in electronic systems are recorded, their causes and elimination deadlines are monitored.

6.4.36.Measures will be taken to develop stable internet and wireless communication capabilities for the use of e-learning and scientific resources on the university premises.

6.4.37.In addition to the availability of the Internet, its coverage of educational buildings, speed, stability, and suitability for the number of simultaneous users are also evaluated.

Academic Advising and Registrar's Office Services

6.4.38.Academic support for students is provided by the Registrar's Office, faculties, departments, professors, tutors, the Information Resource Center, and other relevant departments within their respective jurisdictions.

6.4.39.Academic support services allow students to access information regarding their academic program, work plan, subject selection, credits, GPA, academic status, re-studies, mobility, and academic documents.

6.4.40.The academic advice provided to the student must be fair, in accordance with applicable regulations, and appropriate to his or her situation.

6.4.41.Conflicting information from different departments on the same academic issue is not allowed.

6.4.42.The procedure for using academic services, the application form, required documents, and the method of obtaining results are communicated openly to students.

6.4.43.The registrar's office's electronic platforms should allow students to remotely access academic and administrative services, track the status of their applications, and receive relevant results.

6.4.44.In cases where a student's appeal does not fall within the jurisdiction of a single department, it will not be left unanswered, but will be forwarded to the appropriate responsible department.

6.4.45.Confidentiality of personal information is ensured during the provision of academic advice and services.

Professional development and career support

6.4.46.The Career Center provides services that support students' professional development, internships, familiarization with labor market requirements, and employment.

6.4.47.Career services include collaboration with employers, information on job vacancies and internship opportunities, career counseling, job fairs, and meetings.

6.4.48.The effectiveness of career events is measured not only by the number of events held, but also by student participation in them, internship opportunities, collaboration with employers, and graduate employment outcomes.

6.4.49.The relevance and reliability of information about job vacancies and internship opportunities provided to students is ensured.

Inclusive educational resources and equal access

6.4.50.The University will progressively provide access to educational resources, buildings, information systems, and academic services for students with disabilities and special educational needs.

6.4.51.Inclusive education settings may include ramps, elevators, adapted restrooms, special computer programs, screen readers, Braille or electronic literature, adapted classrooms, and assessment settings.

6.4.52.The adjustment measure should not reduce the academic requirements for the student's educational outcomes, but should serve to demonstrate his knowledge and competencies on equal terms.

6.4.53.When a student is identified as having a special need, the necessary resources or accommodations are determined in collaboration with relevant departments.

6.4.54.Along with the availability of inclusive infrastructure, its practical operation, safety, and ease of independent use are also assessed.

6.4.55.When assessing inclusive conditions, the opinions of students with disabilities or their legal representatives are taken into account to the extent possible.

Support for foreign students and participants in academic mobility

6.4.56.Foreign students and participants in academic mobility are provided with understandable information about the University and the educational process, academic regulations, and the use of HEMIS and other electronic systems.

6.4.57.The academic adaptation of foreign students is supported in collaboration with the international relations department, relevant faculty, department, tutor, and other responsible staff.

6.4.58.Academic information provided to a foreign student must be delivered in a language that he or she understands or in a form that allows for a full understanding of its content.

6.4.59.Applications from foreign students and mobility participants regarding subject selection, course schedule, credits, assessment, transcripts, and recognition of learning outcomes are coordinated by the relevant departments.

Requirements for support services staff

6.4.60.Staff providing academic services to students must have the necessary professional knowledge, service culture, and digital skills to perform their duties.

6.4.61.Employees adhere to the requirements of impartiality, courtesy, promptness, confidentiality, protection of personal data, and non-discrimination when working with students.

6.4.62.To prevent students from being provided with incorrect or outdated information, service staff are regularly updated with changes in current regulatory and internal documents.

6.4.63.The university develops the professional potential of service staff through seminars, training, advanced training, and experience sharing.

Powers and responsibilities

6.4.64.The Vice-Rector for Academic Affairs provides overall coordination of the processes of providing educational programs with the necessary academic resources and services.

6.4.65.The Educational and Methodological Department, together with the relevant departments, determines the need for educational and methodological resources arising from educational programs, working curricula, and subject content.

6.4.66.The dean of the faculty summarizes the needs for the faculty's existing auditorium, laboratory, literature, digital resources, and academic services and presents the identified problems to the relevant departments.

6.4.67.The head of the department ensures that the need for literature, equipment, software, laboratories, and other resources necessary for the implementation of the educational program and disciplines is justified.

6.4.68.The Information Resource Center is responsible for forming a literature fund, maintaining an electronic catalog, providing access to information resources, and providing advice to users.

6.4.69.The Registrar's Office ensures the organization of academic services, the handling of electronic applications, and the provision of accurate academic information to students.

6.4.70.The Center for Digital Educational Technologies ensures academic information systems, electronic platforms, internet infrastructure, access rights, and data security within its mandate.

6.4.71.The Career Center provides students with career advice, information about internship and employment opportunities, and organizes cooperation with employers.

6.4.72.The International Relations Department coordinates services related to the academic adaptation of foreign students and academic mobility participants in cooperation with relevant departments.

6.4.73.The departments responsible for material and technical support and economic activities ensure the health and safety of buildings, auditoriums, equipment, and engineering infrastructure.

6.4.74.The Education Quality Control Department monitors the adequacy, ease of use, and impact of educational resources and academic support services on the quality of education.

6.4.75.Each structural unit is responsible for the accuracy of resources, services, and monitoring data within its jurisdiction.

Monitoring and improvement

6.4.76.Educational resources and academic support services are monitored for readiness before the start of the academic year and for effectiveness of use throughout the academic year.

6.4.77.Monitoring covers resource availability, technical condition, capacity, utilization levels, quality of service, system performance stability, and user feedback.

6.4.78.Monitoring uses documentation, on-site visits, usage statistics, electronic system records, student and faculty questionnaires, appeals, and information about technical failures.

6.4.79.Student satisfaction is an important indicator, but the quality of a resource or service cannot be assessed solely based on the results of a survey.

6.4.80.The availability of a resource is not considered sufficient if users cannot actually use it, it does not work technically, or it does not serve educational outcomes.

6.4.81.The number of outages, their duration, the speed of resolving complaints, and repeated failures in electronic systems are analyzed.

6.4.82.When monitoring the activities of the information resource center, along with the size of the fund, the use of resources, access to electronic databases, and satisfaction of user needs are also taken into account.

6.4.83.Academic services monitoring includes the review period for applications, the accuracy of information provided, re-applications, and student satisfaction.

6.4.84.Based on the results of the monitoring, the cause of the resource or service deficiency, its impact on student education, and the necessary measures to eliminate it are determined.

6.4.85.An improvement measure is determined, indicating the department responsible for the identified deficiencies, the implementation period, the required resources, and the expected result.

6.4.86.Deficiencies that pose a direct threat to student safety, the achievement of mandated learning outcomes, or the protection of academic data are considered a priority issue that cannot be postponed.

6.4.87.The implementation of an improvement measure is confirmed not only by the fact that funds have been spent or equipment has been purchased, but also by the fact that the problem has been resolved and a practical result has been achieved for the user.

6.4.88.The effectiveness of the measures taken will be assessed based on repeated monitoring, usage indicators, and stakeholder feedback.

Assessing the implementation of standards

6.4.89.The implementation of these standards is assessed in two stages: at the first stage, the existence of the minimum and critical conditions necessary for the implementation of the educational process is checked;

OFFICIAL TRANSLATION

In the second stage, the quality, usability, sustainability, and impact of resources and academic services on the educational process are assessed based on a 100-point quality profile.

6.4.90. Minimum and critical conditions are checked based on Appendix 6.4.1 - “Minimum Compliance Control Card for Educational Resources and Academic Services”.

6.4.91. The overall quality level of resources and services is assessed based on Appendix 6.4.2 - “Quality Profile of Educational Resources and Academic Support Services”.

6.4.92. Each aspect of the quality profile is rated at level A, B, C, D or E:

Level	Status	Coefficient against maximum score
A	The resource or service is sufficient, operates efficiently, and is improved based on results.	1.00
B	Basic requirements met, some improvements needed	0.75
C	The resource or service exists, but there are significant limitations on its use and quality.	0.50
D	The resource or service is operating with serious flaws.	0.25
E	The resource or service is unavailable or practically unusable.	0.00

6.4.93. The score for each direction is calculated in the following order:

Calculated score = maximum score of the course × assigned grade coefficient.

6.4.94. The overall result is interpreted as follows:

Total points	Quality status
90–100	Resources and academic services are sustainable, effective and fully aligned with educational needs
75–89	Resources and services are generally sufficient, some areas need to be developed
60–74	Provision is uneven, significant improvement measures are needed
0–59	Lack of resources or services poses a high risk to the quality of education

OFFICIAL TRANSLATION

6.4.95. Critical non-compliance includes the use of a building or equipment that does not meet safety requirements, the lack of resources necessary to achieve the required outcomes of the educational program, the lack of protection of data in academic information systems, or the practical restriction of access to education for a student with special educational needs.

6.4.96. In the event of a critical non-conformity, a conclusion of full compliance with the requirements of the standard will not be given, regardless of the high overall score.

6.4.97. Deficiencies identified as a result of the assessment are assigned to one of the following priority levels, depending on their impact and urgency:

Priority	Content	Implementation period
P1	Direct threat to security, educational continuity, or data protection	Immediately
P2	A disability that significantly affects the achievement of educational outcomes	During the current semester
P3	A disadvantage that limits the quality of service and ease of use	Up to one year
P4	Opportunity for development and advancement	Within the framework of strategic and annual plans

ANNEX 6.4.1: Minimum Compliance Checklist for Educational Resources and Academic Services

Code	Minimum requirement	Fully equipped	Partially provided	Not provided	Supporting evidence and explanation
M-1	Classrooms and laboratories meet sanitary,	☐	☐	☐	

OFFICIAL TRANSLATION

	fire and technical safety requirements				
M-2	The necessary laboratory, equipment, and software are available to achieve the required outcomes of the educational program.	☐	☐	☐	
M-3	Classroom capacity is based on the number of students and the type of training.	☐	☐	☐	
M-4	Access to necessary textbooks or electronic resources in basic subjects	☐	☐	☐	
M-5	Access to HEMIS, LMS and other important academic systems is provided	☐	☐	☐	
M-6	Important academic data is backed up and protected from unauthorized access	☐	☐	☐	
M-7	Students have access to academic advising and Registrar's Office services.	☐	☐	☐	
M-8	Information about electronic services and academic procedures is available to students.	☐	☐	☐	
M-9	There are at least reasonable accommodations for students with disabilities and special needs.	☐	☐	☐	
M-10	There is a procedure for recording and resolving technical malfunctions and service requests.	☐	☐	☐	
M-11	The authority and responsibility of academic service staff are defined	☐	☐	☐	
M-12	Critical issues identified regarding resources and services are not left unattended	☐	☐	☐	

Conclusion on critical inconsistency

A critical nonconformity is recorded if any of the following requirements are not met:

- M-1 - security;
- M-2 - a necessary resource for educational outcomes;
- M-5 - use of important academic systems;
- M-6 - data protection;
- M-9 - equal educational opportunity.

ANNEX 6.4.2: Quality Profile of Educational Resources and Academic Support Services

Evaluation table

Cod e	Assessm ent direction	Maxim um score	Lev el A–E	Coeffici ent	Calculat ed score	Objecti ve eviden ce	User feedba ck	Disadvant age and priority
R-1	Classrooms, buildings, and the general learning environment	12						
R-2	Laboratories, computers, specialized	13						

OFFICIAL TRANSLATION

	equipment and software							
R-3	Information resource center, educational literature and scientific databases	15						
R-4	HEMIS, LMS, electronic platforms, internet and digital infrastructure	15						
X-1	Registrar's Office and Academic Advising Services	15						
X-2	Career, internship and professional development support	10						
I-1	Inclusive resources and equal access	10						
I-2	Academic support for foreign students and	5						

OFFICIAL TRANSLATION

	academic mobility participants							
B-1	Service staff capacity, monitoring and improvement	5						
	Total	100						

Levels A–E.

Level	Coefficient	Content
A	1.00	The resource or service is fully adequate, operates efficiently, and is regularly improved.
B	0.75	The basic requirements are met, but there are some shortcomings.
C	0.50	The resource or service is available, but there are significant restrictions on use.
D	0.25	The resource or service is operating with serious deficiencies.
E	0.00	The resource is not available or cannot be used practically.

Calculation procedure (formula):

Calculated score = maximum score × grade coefficient

For example, the maximum score for the R-1 route is 12 points.

If the condition is assessed as level B:

$$12 \times 0.75 = 9 \text{ points}$$

If it is a C level:

$$12 \times 0.50 = 6 \text{ points}$$

If it is level D:

$$12 \times 0.25 = 3 \text{ points}$$

If it is an A level, a full 12 points are awarded, while at an E level, 0 points are awarded.

How to fill out line R-1?

For example, the auditoriums are mostly good, but the projector doesn't work in some rooms and the internet is unstable.

Column	Sample
--------	--------

OFFICIAL TRANSLATION

Code	R-1
Assessment direction	Classrooms, buildings, and the general learning environment
Maximum score	12
Level	B
Coefficient	0.75
Calculated score	9
Objective evidence	List of auditors, technical inspection report, equipment inventory, results of on-site inspection
User feedback	78% of students are satisfied with classroom conditions, there are complaints about internet stability
Disadvantage and priority	Projector repair in 5 auditoriums, internet coverage expansion - P2

"Disadvantage and priority"

Priority	Content
P1	Immediate threat to safety, educational continuity, or data protection. Resolved immediately.
P2	A problem that significantly affects learning outcomes. Will be resolved this semester.
P3	An issue that limits the quality of service or ease of use. Will be resolved within one year.
P4	Opportunity for development and further improvement. Implemented based on plans.

So, the expert first studies the evidence, checks the opinions of users, determines one of the levels A–E, calculates a score based on the coefficient, and assigns a priority P1–P4 to the identified problem.

Brief description of the quality profile

Direction	Strength	Main disadvantage	Impact on the educational process	Priority
Material and technical resources				
Library and information resources				

OFFICIAL TRANSLATION

Digital systems				
Academic services				
Inclusive opportunities

6.5. Quality assurance standards in the field of continuous monitoring, periodic evaluation and revision of educational programs

Standard requirement

The university regularly evaluates the relevance, scientific and professional basis of each educational program, its compliance with the needs of the labor market and society, the consistency of educational content, and the degree to which students achieve the expected learning outcomes.

The fact that a program is approved does not mean that its quality is permanently assured. During the implementation of the program, student outcomes, faculty capacity, subject content, assessment methods, workload, resources, graduate employment, and stakeholder opinions may change. Therefore, the program is subject to ongoing monitoring, periodic comprehensive evaluation, and evidence-based revision.

Monitoring and evaluation results are used not only for reporting purposes, but also to address identified problems, disseminate best practices, make changes based on the educational program, and verify the effectiveness of the measures taken.

Educational program monitoring system

6.5.1.The university regularly monitors the goals, expected learning outcomes, content, structure, workload, and implementation conditions of each educational program.

6.5.2.Monitoring an educational program serves to assess whether it is being implemented in accordance with approved documents, meets the needs of students and stakeholders, and achieves the intended outcomes.

6.5.3.Monitoring is a continuous process and includes analysis of semester-long academic data, observation of the educational process, stakeholder feedback, internal evaluation, and summarization of external recommendations.

6.5.4.Monitoring results are generated separately for each educational program. Overall average indicators at the faculty or university level alone are not sufficient to assess the status of a particular educational program.

6.5.5.When monitoring an educational program, there is a distinction between a one-time situation and a long-term, systemic problem.

6.5.6.Monitoring indicators are compared over several periods. Improvement, stability, or decline in results are noted separately.

6.5.7.Monitoring serves not only to identify shortcomings, but also to identify effective teaching practices, high-performing subjects, and successful academic practices.

Frequency and content of current monitoring

6.5.8.Students' subject mastery indicators, GPA results, academic debt, course-to-course transfer, retakes, and final examination results are analyzed at the end of each semester.

6.5.9.Student satisfaction, learning environment, quality of teaching and assessment, independent learning, and academic support services are studied through periodic surveys.

6.5.10.At least the following areas are studied when monitoring the educational program:

1. Relevance of program objectives and expected learning outcomes;
2. Logical consistency between disciplines and modules;
3. The validity of the student workload;
4. Modernity of the content of the sciences;
5. The relevance of teaching and assessment methods to learning outcomes;
6. Student academic development;
7. Faculty capacity;
8. Adequacy of educational resources;
9. Internships and collaboration with employers;
10. Graduate employment and professional activities;
11. Stakeholder opinion;
12. Internal and external evaluation conclusions.

6.5.11.Monitoring studies not only final grades, but also the dynamics of student results across subjects, courses, groups, and years.

6.5.12.If very high or very low results are consistently recorded in certain subjects, their causes are analyzed in conjunction with assessment tasks, teaching methods, student preparation, and subject content.

6.5.13.High academic debt is not automatically explained by student irresponsibility alone. Subject content, curriculum, teaching methods, resources, and assessment criteria are also examined.

6.5.14.A high mastery rate does not in itself confirm the high quality of the program. The complexity of the assessment tasks and their correspondence to the learning outcomes are checked.

Information and evidence for monitoring

6.5.15.Reliable, verifiable, and up-to-date information is used in monitoring and periodic evaluation of the educational program.

6.5.16.The main sources of information for monitoring include:

- HEMIS and other academic information systems;
- students' academic results;
- student, graduate, and employer surveys;

- analytical data of professors and departments;
- Conclusions of the final state attestation commission;
- information on graduate employment;
- practice results;
- monitoring of educational resources;
- audit of lesson observations and assessment tools;
- appeals and petitions;
- internal and external evaluation results.

6.5.17.Information from different sources is compared as much as possible. No final conclusion about the educational program is drawn based on a single source.

6.5.18.Survey results are interpreted taking into account the number of respondents, response rate, and representativeness of the data.

6.5.19.A separate opinion or individual appeal from interested parties is not accepted as a general trend, but is studied separately if it contains a serious risk or sign of a violation.

6.5.20.Deliberately misrepresenting monitoring data, concealing unfavorable results, or presenting unsubstantiated conclusions is not permitted.

Using the results of the final state certification

6.5.21.The recommendations of the final state attestation commission regarding the preparation of graduates, professional competencies, and content of the educational program are analyzed by the relevant department and faculty.

6.5.22.The recommendations of the final state attestation commission will identify the deficiencies noted, their cause, which part of the educational program they are related to, and the necessary improvement measures.

6.5.23.Repeatedly noted recommendations will be subject to separate monitoring, and their non-implementation must be justified by the relevant structural unit.

Stakeholder engagement

6.5.24.Students, faculty, alumni, employers, and other stakeholders are involved in the monitoring and review processes of educational programs.

6.5.25.Stakeholder engagement is ensured through surveys, meetings, interviews, written submissions, discussion of practice outcomes, and participation in department meetings and Faculty Council meetings.

6.5.26.Proposals received from stakeholders are analyzed for their validity, relevance to the goals of the educational program, impact on student interests, required resources, and feasibility.

6.5.27.Proposals from interested parties are not automatically accepted. Important proposals that are accepted, partially accepted, or rejected with justification will be reflected in the relevant documents.

6.5.28.Proposals that are based solely on the current needs of employers but limit the long-term academic and professional development of the graduate will not be included in the educational program without expert analysis.

Periodic comprehensive evaluation of educational programs

6.5.29.Each educational program, in addition to current monitoring, undergoes a comprehensive periodic evaluation, as a rule, at least once every five years.

6.5.30.Comprehensive periodic evaluation can be integrated with the preparation process for external accreditation, but external accreditation does not replace the University's internal evaluation obligation.

6.5.31.In a comprehensive evaluation, all the main elements of the educational program, their interrelationships, and the results achieved by the program are studied as a holistic system.

6.5.32.A comprehensive assessment covers the following:

- relevance of program objectives and qualification description;
- measurement of expected learning outcomes;
- logical structure of the curriculum;
- modernity of the content of the subjects;
- the validity of the credit load;
- training and assessment system;
- faculty capacity;
- resources and services;
- student results;
- graduate employment;
- employers' needs;
- national and international best practices.

6.5.33.As a result of periodic evaluation, a conclusion is given on the continuation of the educational program without changes, targeted improvement, significant revision, or comprehensive redesign.

Grounds for early review

6.5.34.The educational program may be revised without waiting for the end of the five-year period.

6.5.35.The following may be grounds for early review:

1. Changes in regulatory requirements;
2. Update of state educational standards or qualification requirements;
3. Introduction of new professional standards;

4. The need for new competencies in the labor market;
5. Significant decline in student learning outcomes;
6. Persistently high levels of academic debt;
7. Reasoned recommendations from employers or alumni;
8. External evaluation and accreditation conclusions;
9. Significant developments in science and technology;
10. Other serious factors affecting the effectiveness of the training program.

6.5.36. The initiative for early reconsideration must be justified by evidence confirming the problem and the expected academic results.

Making changes to the educational program

6.5.37. Changes to the educational program should be based on monitoring, periodic evaluation, stakeholder suggestions, regulatory requirements, or external evaluation results.

6.5.38. The change initiative shall indicate at least the following:

- identified problem or need;
- evidence supporting the problem;
- proposed change;
- the expected result of the change;
- affected disciplines and documents;
- relevant student contingent;
- necessary resources;
- possible risks.

6.5.39. When revising the educational program, its goals, learning outcomes, content and sequence of subjects, elective subjects, credit load, practice content, teaching and assessment methods, and educational and methodological support can be improved.

6.5.40. Changes to the curriculum should be proportionate to the scale of the problem. A problem with a single subject should not lead to an unreasonable restructuring of the entire curriculum.

6.5.41. Changes that affect the objectives of the educational program, qualification description, expected outcomes, credit volume, subject content, or internship content are considered significant changes.

6.5.42. The procedure for formalizing changes that do not affect technical, editorial, or content is determined by the relevant internal documents of the University.

Protecting the rights of current students

6.5.43. Changes to the educational program may also apply to the current student contingent.

6.5.44. This ensures that students' previously acquired credits, academic rights, logical sequence of subjects, completion time, and ability to achieve the specified qualification are not negatively affected.

6.5.45. Before changes affecting the current student contingent are implemented, their academic, organizational, and financial implications are assessed.

6.5.46. If necessary, a transition period, alternative subject, individual academic plan, or other coordinating measure will be established.

6.5.47. A student will not be unreasonably forced to retake previously acquired learning outcomes and credits.

Review and approve changes

6.5.48. A proposal to make a significant change to the educational program will initially be discussed at a meeting of the relevant department.

6.5.49. The department will make a decision on the scientific, academic, professional, and methodological validity of the proposal.

6.5.50. The proposal approved by the department will be considered by the Faculty Council. Relevant students, employers, representatives of the Academic and Methodological Department and the Education Quality Control Department will be invited to the discussion.

6.5.51. The faculty council evaluates the consistency of the change with the goals of the educational program, student interests, resources, and faculty capabilities.

6.5.52. Important changes recommended by the Faculty Council are considered by the Academic and Methodological Council from the perspective of academic and methodological requirements.

6.5.53. The amendment approved by the Academic and Methodological Council will be submitted to the University Council.

6.5.54. Major changes to the curriculum are reviewed by the University Council and approved in accordance with the established procedure.

6.5.55. In cases where the legislation provides for a different approval or approval procedure, the appropriate procedure shall apply.

Document and announce changes

6.5.56. Changes to the educational program are formalized by relevant council resolutions, minutes, updated educational programs, and educational and methodological documents.

6.5.57. The documents indicate the content of the change, its grounds, the date of approval, the effective date, and the student contingent to which it applies.

6.5.58.Approved and updated educational program documents are stored in the Educational and Methodological Department, the relevant faculty and department in accordance with the established procedure.

6.5.59.The current and outdated versions of documents are clearly distinguished. The use of outdated versions in the educational process is not allowed.

6.5.60.Important changes that directly affect students, faculty, and other stakeholders will be communicated to them in an understandable form before they take effect.

6.5.61.The publication of publicly available information regarding the educational program is carried out based on the requirements set forth in Chapter 13 of this Policy.

Assessing the effectiveness of the changes made

6.5.62.A change in the educational program is viewed as a measure of improvement, not as an end result.

6.5.63.For each significant change, its expected outcome and performance measurement indicator are predetermined.

6.5.64.The practical effectiveness of the change will be assessed during the next monitoring period.

6.5.65.The evaluation examines whether the change has achieved its intended purpose, its impact on student outcomes, teaching quality, curriculum, and stakeholder satisfaction.

6.5.66.In cases where the expected result is not observed, the reason for the change, the quality of the implementation, and the correctness of the initial solution are re-analyzed.

6.5.67.If necessary, additional corrective action, a transition period, or an alternative academic solution will be determined.

Using external evaluation results

6.5.68.External evaluation and accreditation conclusions are analyzed as important evidence for the development of the educational program.

6.5.69.Based on the shortcomings and recommendations identified in the external evaluation, the Education Quality Control Department, in collaboration with relevant structural units, coordinates the development of an action plan.

6.5.70.The action plan defines tasks, responsible executors, deadlines, necessary resources, expected results, and supporting evidence.

6.5.71.The implementation of external evaluation recommendations is monitored by the Education Quality Control Department.

6.5.72.Detailed requirements for organizing external assessment and accreditation processes are set out in Chapter 14 of this Policy.

Powers and responsibilities

6.5.73.The Vice-Rector for Academic Affairs provides overall leadership for the system of monitoring, periodic evaluation and revision of educational programs.

6.5.74.The head of the department is responsible for developing proposals for improvement based on the content of the educational program, the composition of subjects, educational outcomes, compliance with the professional direction, and monitoring results.

6.5.75.The Dean of the Faculty coordinates the monitoring of educational programs within the faculty, ensures the participation of stakeholders, and introduces identified issues to the relevant councils.

6.5.76.The Educational and Methodological Department examines the compliance of educational programs, curricula, and educational and methodological documents with current academic and regulatory requirements.

6.5.77.The Education Quality Control Department monitors the implementation of educational programs, student outcomes, lessons, assessment processes, and student satisfaction.

6.5.78.The Education Quality Control Department summarizes the monitoring results in collaboration with the Educational and Methodological Department and prepares proposals for improvement.

6.5.79.The Education Quality Control Department participates, within its competence, in councils where issues of making changes to educational programs are considered and provides an opinion on quality requirements.

6.5.80.The Registrar's Office provides information on academic results, GPA, credits, academic debt, and student movement necessary for monitoring.

6.5.81.The Career Center provides information on graduate employment and partnerships with employers.

6.5.82.Faculty, departments, and other relevant departments are responsible for the completeness and accuracy of the information they provide.

Summarizing monitoring results

6.5.83.The summarized results of monitoring educational programs are prepared by the Education Quality Control Department in collaboration with the Educational and Methodological Department.

6.5.84.The summarized data reflects the status of educational programs, key trends, identified problems, stakeholder suggestions, changes made, and their effectiveness.

6.5.85.The summarized results of monitoring can be considered at meetings with the rector or at the University Council.

6.5.86.Based on the results of the discussion, necessary measures will be determined to improve the educational program, develop the capacity of professors and teachers, provide resources, improve the evaluation system, or other necessary measures.

6.5.87.The implementation of the decisions made will be checked during the next monitoring period.

Self-improvement of the monitoring system

6.5.88.The monitoring and periodic evaluation processes of educational programs themselves are also regularly evaluated.

6.5.89.This takes into account the accuracy of monitoring indicators, the reliability of data, the participation of stakeholders, the implementation of decisions, and the effectiveness of the changes made.

6.5.90.Indicators that are unnecessary, repetitive, or do not serve management decision-making will be reviewed.

6.5.91.Measures will be taken to automate and digitize the processes of data collection, analysis, and presentation as much as possible.

Assessing the implementation of standards

6.5.92.The implementation of these standards is assessed not by the availability of educational program documentation, but by the systematicity of monitoring, the reliability of evidence, the validity of decisions, and the effectiveness of the changes made.

6.5.93.The evaluation uses the “educational program status signal” model.

Alarm	Status	Coefficient
Green	The direction is stable, requirements are being met, and results are being used for improvement	1.00
Yellow	Basic requirements met, but monitoring and targeted improvements are needed	0.75
Orange	There is a significant problem, corrective action is required	0.50
Red	There is a serious or systemic inconsistency, urgent revision is required	0.25
The evidence is not sufficient.	There is no reliable information available for assessment.	0.00

6.5.94.The score calculated for each area is determined based on the following formula:

Calculated score = maximum score × specified signal coefficient.

OFFICIAL TRANSLATION

6.5.95. The overall status of the educational program is assessed based on the following criteria:

Code	Assessment direction	Maximum score
D-1	Relevance of program objectives and learning outcomes	15
D-2	The rationale for the curriculum, subjects, and credit load	15
D-3	Student academic results and development dynamics	15
D-4	Effectiveness of the training and assessment system	10
D-5	Faculty capacity	10
D-6	Adequacy of resources and academic services	10
D-7	Opinion of students, graduates and employers	10
D-8	Final certification, graduate employment, and external recommendations	10
D-9	Effectiveness of the changes made	5
	Total	100

6.5.96. The final result is interpreted as follows:

Total points	Status of the educational program
85–100	The program is being implemented in a timely, sustainable and effective manner.
70–84	The program requires mainly sustainable, targeted improvements
50–69	The program has significant flaws, a significant revision is needed
0–49	The program needs a comprehensive reassessment and redesign.

6.5.97. The following situations are considered critical inconsistencies:

- organizing the educational process based on an unapproved or outdated educational program;
- introducing significant changes without proper approval;
- Deliberately distorting monitoring data;
- making changes that would harm the academic rights of current students;

OFFICIAL TRANSLATION

- failure to address a systemic deficiency that prevents the achievement of expected educational outcomes;
- Failure to implement serious recommendations repeatedly noted in external evaluations without reason.

6.5.98. If there is a critical inconsistency, the educational program will not be assessed as stable and fully compliant, regardless of the high overall score.

6.5.99. The status of the educational program is assessed based on Appendix 6.5.1 - "Educational Program Monitoring and Periodic Evaluation Panel".

6.5.100. Making changes to the educational program and monitoring its effectiveness is carried out on the basis of Appendix 6.5.2 - "Educational program change initiative and effectiveness monitoring card".

Verification question	Yes	No	Evidence and explanation
Was an unapproved or outdated curriculum used in the training process?	☐	☐	
Was the significant change introduced without the approval of the relevant councils?	☐	☐	
Was the monitoring data intentionally misrepresented?	☐	☐	
Are students' academic rights limited as a result of the change?	☐	☐	
Is there a systemic flaw that prevents the program from achieving its results?	☐	☐	

OFFICIAL TRANSLATION

Has a repeated serious recommendation not been implemented in an external evaluation?	☐	☐	
---	--------------------------	--------------------------	--

D. Final conclusion

Total score: _____ / 100

Critical inconsistency:

☐ there is

☐ not available

Status of the educational program:

☐ The program is being implemented in a timely, sustainable and effective manner.

☐ Targeted improvement required

☐ A significant revision is needed.

☐ A comprehensive reassessment and redesign is needed

Recommended decision:

☐ Continue without change

☐ Setting targeted measures

☐ Making significant changes to the curriculum

☐ Conduct a comprehensive assessment ahead of schedule

E. Key issues and measures

Faculty Council				
Educational and Methodological Council				
University Council				

E. Making a change

Task to be performed	Responsible department or person	Deadline	Necessary resource	Supporting evidence	Execution status

F. Performance evaluation

Performance indicator	Status before change	Expected result	Actual result	Information source	Conclusion
Student achievement index					
Academic debt level					
Student satisfaction					
Employers' opinion					
Level of achievement of educational outcomes					
Other indicator					

G. Re-monitoring summary

The desired result from the change:

☐ fully achieved

☐ basically achieved

☐ partially achieved

☐ not reached

Is additional action necessary?

☐ not necessary

☐ additional corrective action is required

☐ The change needs to be reconsidered.

☐ A comprehensive reassessment of the educational program is necessary.

7. QUALITY ASSURANCE STANDARDS IN SCIENTIFIC RESEARCH AND INNOVATION ACTIVITIES

Standard requirement

The university organizes research and innovation activities in accordance with its mission, development strategy for 2025–2027, the country's scientific and technological priorities, the needs of the region and sectors, and modern trends in the development of science.

The quality of scientific activity is not determined solely by the number of published articles or activities carried out. The relevance of the research topic, methodological soundness, scientific integrity, reliability of results, quality of publications, training of young researchers, implementation of scientific developments into practice, and impact on society are assessed comprehensively.

The university plans scientific activities, implements projects, conducts expert evaluation of results, complies with scientific ethics requirements, commercializes innovations, and monitors achieved results based on a single quality cycle.

Strategic planning of scientific activities

7.1. The university's research and innovation activities are carried out on the basis of the goals, objectives, and performance indicators set out in the development strategy.

7.2. The scientific activity plans of faculties and departments are developed based on the University's strategy, the priorities of relevant disciplines, and the existing scientific potential.

7.3. The scientific part of the work plans of faculties and departments is approved by the Vice-Rector for Scientific Affairs and Innovations and the vice-rectors responsible for the relevant areas of activity within the scope of their powers.

7.4.The scientific activity plan reflects indicators of research, projects, publications, grants, patents, scientific supervision, citations, commercialization, educational exports related to scientific activities, and foreign investments.

7.5.Scientific indicators should be expressed in measurable, time-bound, accountable, and verifiable results.

7.6.When determining scientific topics, their relevance, scientific novelty, relevance to regional and sectoral problems, practical applicability, and the availability of necessary resources are taken into account.

Scientific projects and grants

7.7.Scientific projects and grant initiatives are discussed, selected, and examined based on established internal procedures.

7.8.When evaluating project proposals, the relevance of the topic, scientific novelty, methodology, potential of the performers, implementation period, reasonableness of costs, and expected results are taken into account.

7.9.Conflicts of interest are not allowed in the project appraisal. A person directly interested in the project should not participate in the impartial assessment process.

7.10.Tasks, deadlines, financial costs, intermediate and final results of funded scientific projects are monitored in accordance with the established procedure.

7.11.Project results are evaluated not only on the basis of the submitted report, but also on the basis of the scientific result obtained, the development created, publication, patent, implementation into practice, or other verifiable results.

7.12.In cases where project indicators are not met, the reasons for this, the state of resource utilization, and factors that affected the results are investigated, and corrective measures are determined.

Quality of scientific publications and results

7.13.Scientific publications by professors, researchers, and scholars must be based on real research results, reliable data, and scientific ethics.

7.14.When evaluating scientific activity, the number of articles or publications, as well as their scientific level, the prestige of the published source, citations, contribution to the field, and practical significance are taken into account.

7.15.Publications indexed in Scopus, Web of Science, and other recognized scientific databases are recorded based on their authenticity, author contribution, and status in the relevant database.

7.16.It is not allowed to encourage the publication of articles in publications that are dubious, fraudulent, or do not perform scientific expertise to the required level.

7.17.Before being considered by the University Council, monographs are fully checked in the antiplag.uz system and undergo internal and external reviews.

7.18.When recommending a monograph to the University Council, its topic, scientific novelty, content integrity, correct use of sources, the author's personal contribution, and anti-plagiarism results are taken into account.

7.19.The Editorial and Publishing Department ensures the quality of preparation, editing, publication requirements, and formalization of scientific and educational publications within its scope of competence.

7.20.The activities of university scientific journals are based on the principles of editorial independence, impartiality of review, copyright, scientific ethics, and transparency of the publication process.

Scientific ethics and research integrity

7.21.Falsification of data, alteration of results, plagiarism, appropriation, artificial authorship, concealment of another person's contribution, and failure to disclose conflicts of interest are not permitted in scientific research activities.

7.22.Cases of scientific ethics, authorship, conflict of interest, and scientific misconduct are considered in accordance with the procedure established in the relevant internal documents of the University.

7.23.The unit responsible for corruption and compliance control participates within its competence in investigating cases related to conflicts of interest, corruption risks, or illegal influence on the assessment process.

7.24.Monographs, master's and doctoral dissertations, and other scientific works specified in internal documents are checked through the antiplag.uz system.

7.25.The percentage of the anti-plagiarism system is not a final conclusion about the quality and independence of the scientific work. The correctness of the use of sources, citations, scientific novelty and the author's personal contribution are assessed by experts in their content.

7.26.Complaints about violations of scientific ethics are considered based on the principles of confidentiality, impartiality, evidence-based approach, and non-intimidation of the complainant.

Training of scientific and pedagogical personnel

7.27.The individual plans, research results, publications, and dissertation preparation status of doctoral students, postdoctoral fellows, and independent researchers are monitored quarterly.

7.28.Monitoring is carried out by the Department of Scientific Research, Innovation and Scientific and Pedagogical Personnel Training with the participation of relevant scientific supervisors, departments and other officials.

7.29.During monitoring, not only the fulfillment of the plan items is assessed, but also the scientific quality of the research, the reliability of the results obtained, and the degree to which the dissertation goal is achieved.

7.30.A seeker who is not fulfilling the individual plan will be given recommendations or instructions indicating the identified problems, necessary measures, and a deadline for their elimination.

7.31.The scientific supervisor is responsible for providing scientific and methodological assistance to the researcher, supporting the substantive quality of the research, and the implementation of the individual plan.

Scientific activities of young scientists and students

7.32.The university attracts young scientists and students to scientific activities through scientific circles, conferences, competitions, startups, grants, scholarships, and scientific trips.

7.33.Students' scientific activities are linked as much as possible to educational programs, scientific areas of departments, and research of professors and teachers.

7.34.Young researchers will be provided with methodological support in preparing scientific articles, writing projects, research methodology, intellectual property, and commercialization.

7.35.When evaluating the activities of young scientists and students, not only the number of events participated in, but also the scientific results achieved and the dynamics of further development are taken into account.

Innovative developments and commercialization

7.36.The Department of Commercialization of Scientific and Innovative Developments coordinates the processes of innovative ideas, patents, startups, scientific developments and their implementation into practice.

7.37.When selecting promising developments for commercialization, their novelty, technical readiness, market need, intellectual property status, economic potential, and feasibility are assessed.

7.38.The implementation of a scientific development into practice is confirmed by an act, contract, license, patent utilization document, customer conclusion, product or service result, and other verifiable documents.

7.39.A spin-off enterprise established on the basis of a scientific development can be recognized as a result of commercialization. In this case, its connection with the scientific development, registration, activities, contracts, investment, income or other practical results must be confirmed.

7.40.The existence of a patent or startup is not considered a high-level practical result in itself. Its use, the value created for the user or customer, and the economic or social impact are also studied.

7.41.Revenues from commercialization, investments attracted, contracts concluded, and spin-offs created are recorded on the basis of reliable financial and legal documents.

Scientific infrastructure

7.42.The university develops a scientific infrastructure consisting of laboratories, research centers, scientific journals, databases, equipment, and related software to conduct scientific research.

7.43.When planning scientific infrastructure, scientific areas, projects, number of researchers, workload of existing equipment, and future development needs are taken into account.

7.44.The procedure for using scientific equipment and laboratories, safety requirements, responsible persons, and usage records are determined.

7.45.The quality of scientific infrastructure is assessed not only by the availability of equipment, but also by its technical condition, level of use, and contribution to scientific results.

Powers and responsibilities

7.46.The Vice-Rector for Scientific Affairs and Innovations provides overall leadership for research, training of scientific and pedagogical personnel, and innovative activities.

7.47.The Department of Research, Innovation and Scientific and Pedagogical Personnel Training coordinates scientific plans, monitors doctoral students and researchers, summarizes scientific indicators, and prepares an annual report.

7.48.The Department of Commercialization of Scientific and Innovative Developments is responsible for identifying innovative developments, protecting intellectual property, developing startups and spin-offs, and monitoring commercialization results.

7.49.Research centers organize research, projects, scientific collaboration, and the effective use of infrastructure in their areas.

7.50.The dean of the faculty and the head of the department are responsible for the scientific plans, indicators, quality of research, and the accuracy of the information provided in the relevant department.

7.51.The Department of Education Quality Control evaluates, within its scope of competence, aspects of scientific activity that affect educational programs, faculty potential, and scientific and pedagogical quality.

Monitoring and improvement

7.52.The results of research and innovation activities are analyzed on a quarterly, semi-annual and annual basis.

7.53.Monitoring takes into account the status of plans and strategic indicators, scientific projects, publications, citations, grants, patents, scientific personnel training, commercialization, education exports, and foreign investments.

7.54.The results of monitoring are reviewed at meetings under the rector and at the University Council, as necessary.

7.55.In cases where academic performance indicators are not met, the cause of the problem is identified and a written assignment, action plan, or other corrective measures are assigned to the relevant faculty, department, or responsible employee.

7.56.The implementation of corrective actions will be re-examined during the next quarterly or other designated monitoring period.

7.57.The annual summary report on the university's research and innovation activities is prepared by the Department of Research, Innovation and Scientific and Pedagogical Personnel Training under the leadership of the Vice-Rector for Research and Innovation.

7.58.The annual report reflects not only quantitative indicators, but also the quality of scientific results, scientific integrity, the development of young researchers, the implementation of innovative results, and identified problems.

Assessing the implementation of standards

7.59.The fulfillment of these standards is determined based on an assessment of the scientific portfolio in three aspects:

1. Planning and implementation of activities in accordance with the rules;
2. The quality and reliability of the scientific result obtained;
3. The scientific, educational, social, or economic impact of the result.

7.60.The overall state of scientific activity is assessed on a 100-point system in the following areas:

Code	Assessment direction	Maximum score
I-1	Scientific strategy, plans and priorities	10
I-2	Quality of scientific projects and grants	15
I-3	Quality of scientific publications, citations and results	15
I-4	Scientific ethics, integrity, and conflict of interest management	15
I-5	Development of doctoral students, researchers and young researchers	10

OFFICIAL TRANSLATION

I-6	Innovation, patents and commercialization	15
I-7	Scientific infrastructure and information resources	10
I-8	Monitoring, reporting and improvement	10
	Total	100

7.61. The overall result is interpreted as follows:

Total points	The state of scientific activity
86–100	Scientific and innovative activities are systematic, high-quality and effective
71–85	Activity is mostly stable, some areas need to be developed
51–70	There are significant shortcomings in scientific activities
0–50	The system of scientific and innovative activities requires comprehensive improvement

7.62. Falsifying scientific data, deliberately concealing plagiarism, including a non-existent publication or project in a report, misusing grant funds, and recording commercialization results without supporting evidence are considered critical inconsistencies.

7.63. If there is a critical non-conformity, a conclusion of full compliance with this standard will not be given, regardless of the high overall score.

7.64. Research and innovation activities are assessed based on Appendix 7.1 - "Scientific activity portfolio and quality assessment card".

7.65. The implementation and commercialization of the innovative development is monitored through Appendix 7.2 - "Innovation result readiness, commercialization and impact map".

8. QUALITY ASSURANCE STANDARDS IN INTERNATIONAL COOPERATION ACTIVITIES

Standard requirement

The university carries out international cooperation activities in accordance with its mission, development strategy for 2025–2027, priorities of educational and scientific activities, and the goals of integration into the international educational space.

The quality of international cooperation is not determined solely by the number of signed memoranda and agreements. The relevance of cooperation, its legal reliability, practical implementation, the opportunities created for students and faculty, the impact on educational and scientific results, the resources involved, and the sustainability of cooperation are comprehensively assessed.

The university ensures a transparent and consistent procedure for selecting foreign partners, concluding international agreements, academic mobility, joint educational programs, working with foreign students and specialists, implementing international projects and grants, and monitoring the results achieved.

Strategic planning of international cooperation

8.1.International cooperation activities are organized on the basis of the goals, objectives, and performance indicators set out in the University's development strategy.

8.2.International cooperation areas are coordinated with educational programs, research priorities, the needs of faculty and students, educational export, and the goals of increasing the international reputation of the University.

8.3.Proposals for international cooperation from faculties and departments should be based on the specific needs of the relevant educational program or scientific direction.

8.4.The plans for international cooperation set indicators for active agreements, academic mobility, joint educational programs, foreign students, foreign professors and specialists, international grants, attracted funds, international publications, and educational export.

8.5.For each international initiative, the expected result, responsible executor, implementation period, necessary resources, and evidence confirming the result are determined in advance.

Selection and evaluation of foreign partners

8.6.Before establishing relations with a foreign higher education organization, scientific institution, or other partner, its legal status, field of activity, accreditation, position in rankings, academic reputation, and cooperation opportunities are studied.

8.7.The selection of a partner organization is not limited to its name or ranking. Its compatibility with TerSU's educational programs, scientific areas, and strategic needs is also assessed.

8.8.Information about the partner organization is verified through the official website, accreditation information, state and international registers, results of previous cooperation, and other reliable sources.

8.9.In cases where a partnership may pose corruption, financial, legal or reputational risks, appropriate legal, financial and compliance due diligence is conducted.

8.10.If there are serious doubts about the activities, status or reliability of the partner organization, the issue of concluding or continuing the cooperation agreement will be reconsidered.

Drafting memorandums and agreements

8.11.The initiative to establish foreign cooperation may be introduced by the Vice-Rector for International Relations, the Department of International Relations, the Department of International Accreditation and Ratings, a faculty, department, or other relevant unit.

8.12.The draft memorandum or agreement is agreed upon with the International Relations Department, the legal service, the relevant finance department if there is a financial obligation, the interested faculty or department, and the responsible vice-rector.

8.13.International cooperation agreements and memorandums are signed by the Rector of the University.

8.14.The cooperation document shall specify at least the purpose of the cooperation, areas of activity, obligations of the parties, duration, financial terms, recognition of results, intellectual property, data confidentiality, and dispute resolution procedures.

8.15.A single register of signed memoranda and agreements is maintained by the International Relations Department.

8.16.The register records the date of the agreement, its validity period, partner organization, responsible unit, planned activities, achieved results, and current status.

8.17.Memoranda that are expiring, have not yielded results for a long time, or have lost their relevance are periodically reviewed.

8.18.In cases where the partnership is not successful, its extension will not be automatic. A reasoned decision will be made to continue, renew or terminate the partnership.

Academic mobility

8.19.Academic mobility of students and faculty is organized on the principles of openness, voluntariness, equal opportunities, and academic benefit.

8.20.The selection of candidates for the mobility program is based on an open announcement, document review, and interview.

8.21.Selection criteria, list of documents, deadlines, funding conditions and selection stages will be announced in advance.

8.22.The activities of the selection committee shall ensure impartiality and prevention of conflicts of interest.

8.23.Before a student is sent on academic mobility, a Learning Agreement is drawn up between TerDU, the receiving higher education institution, and the student.

8.24.The Learning Agreement clearly specifies the subjects to be mastered, credits, learning outcomes, assessment, and subsequent recognition conditions.

8.25.Mobility costs can be financed from international projects and grants, University funds, a partner organization, gratuitous support, the student's personal funds, or other sources not prohibited by law.

8.26. The source of funding, the costs to be covered and the financial obligations of the participant are clearly defined before the start of the trip or mobility.

8.27. The transcript and other academic documents of a student returning from mobility will be reviewed by the International Relations Department and the Registrar's Office.

8.28. In accordance with the Learning Agreement, the subjects and credits acquired are entered into the HEMIS information system in the prescribed manner.

8.29. Upon returning from a foreign mobility or business trip, the professor-teacher will submit a report on the activities carried out, the results achieved, and the possibilities for future cooperation.

8.30. The results of the mobility will be communicated to the University community in the form of a seminar, presentation, open lecture, methodological recommendation, or other form.

Joint educational programs

8.31. Before establishing a joint educational program, the legal status, accreditation, educational program, faculty capacity, and diploma recognition of the partner higher education institution are studied.

8.32. A joint education program is organized based on its academic necessity, student and labor market needs, financial sustainability, and the availability of necessary resources.

8.33. The agreement on a joint educational program clearly defines the admission procedure, curriculum, language of instruction, student movement, assessment, credit recognition, fees, student rights, and the type of diploma awarded.

8.34. The type of dual diploma, joint diploma, or partner university diploma that a student will receive will be publicly announced before the start of enrollment.

8.35. The documents of the joint educational program are reviewed by the University Council and approved in accordance with the established procedure.

8.36. The educational process, assessment, language requirements, student movement, and academic rights under the joint program are monitored by the International Relations Department and the Education Quality Control Department within their respective jurisdictions.

8.37. The academic content and teaching and methodological documents of the joint educational program are coordinated by the Teaching and Methodological Department, the relevant faculty and department.

8.38.Joint program students are provided with the same basic academic rights, information, referral, and appeal opportunities as domestic and international students.

Support for foreign students

8.39.Admission, registration, and provision of academic services to foreign students is carried out in collaboration with the International Relations Department, the Registrar's Office, and relevant faculties.

8.40.International students are provided with assistance with visas, temporary registration, accommodation, academic advising, use of HEMIS, and adaptation to the educational process.

8.41.As necessary, appropriate opportunities are created for foreign students to learn Uzbek or Russian and adapt to the social and cultural environment.

8.42.Academic and administrative information provided to international students is presented in a language they understand or in a format that allows for full comprehension of the content.

8.43.International student applications and satisfaction levels are regularly monitored, and appropriate measures are taken to address identified problems.

Attracting foreign professors and experts

8.44.Foreign professors and specialists are invited primarily based on the educational program and the narrowly specialized disciplines, scientific areas, or professional needs of the department.

8.45.The initiative to invite a foreign specialist is justified by his qualifications, experience, planned discipline or activity, expected results, and necessary financial conditions.

8.46.The visit of a foreign expert is formalized by a letter of invitation, activity program, contract or other relevant documents, and, if necessary, an order of the rector.

8.47.The satisfaction of students and faculty with a foreign professor's lecture, seminar, or other activity is studied through a questionnaire.

8.48.The result of the work of a foreign specialist is assessed not only by the number of sessions conducted, but also by the impact on student knowledge, faculty experience, joint research, or further collaboration.

International projects and grants

8.49.International grant and project initiatives are coordinated by the International Relations Department and the Department of Research, Innovation and Scientific and Pedagogical Training within their respective mandates.

8.50.Before an international project proposal is submitted, its content, partners, budget, planned results, financial commitments, and sustainability are subject to internal review.

8.51.The substantive and financial implementation of an international project is monitored on a quarterly, semi-annual or annual basis, depending on the project's terms and conditions.

8.52.Upon completion of the project, the results achieved, the educational or scientific products created, the funds raised, the potential of the participants, and the sustainability of the project results are evaluated.

8.53.The necessary resources, responsible unit, and follow-up plan are identified to continue the project results.

8.54.Mobility, grant, project and financial results under Erasmus+, Mevlana, DAAD and other international programs should be taken into account separately under the name of the relevant program and the source of funding.

Powers and responsibilities

8.55.The Vice-Rector for International Relations provides overall leadership for the University's international cooperation activities.

8.56.The International Relations Department coordinates the study of partner organizations, the preparation and registration of international agreements, mobility, foreign students, foreign specialists, and international projects.

8.57.The International Accreditation and Ratings Department is involved in coordinating international cooperation initiatives with the University's strategic goals in international reputation, accreditation, and ratings.

8.58.The Registrar's Office is involved in the processes of entering foreign students into academic systems, maintaining their academic records, and recognizing mobility results.

8.59.The Educational and Methodological Department reviews the curricula, learning outcomes, and academic documents of joint educational programs within the scope of its authority.

8.60.The Education Quality Control Department monitors the impact of joint programs, international academic activities, the participation of foreign experts, and student satisfaction on the quality of education.

8.61.The dean of the faculty and the head of the department are responsible for the substantive validity and effectiveness of the international cooperation initiative in the relevant educational program or scientific area.

8.62.The Finance and Legal departments review the relevant financial and legal aspects of international agreements and projects within their scope of authority.

Monitoring and improvement

8.63.International cooperation activities are analyzed on a quarterly, semi-annual, and annual basis.

8.64.The monitoring takes into account active contracts, student and faculty mobility, joint educational programs, foreign students, foreign professors, international projects, grants, attracted funds, international publications, and educational exports.

8.65.When evaluating the results of collaboration, measurable academic, scientific, financial, and institutional outcomes are analyzed, not just the number of activities.

8.66.Monitoring results can be reviewed at meetings with the rector and the University Council.

8.67.In cases where the specified indicators are not met, a written assignment, action plan, or other corrective measures are assigned to the responsible faculty, department, or employee.

8.68.Corrective actions will be re-examined during the next monitoring period.

8.69.The annual summary report on international cooperation is prepared by the International Relations Department and the International Accreditation and Ratings Department.

8.70.The annual report reflects the cooperation portfolio, active and inactive agreements, mobility, joint programs, foreign students, projects, funds raised, education exports, current problems and future priorities.

Assessing the implementation of standards

8.71.The quality of international cooperation is assessed not by the number of individual events, but by the intensity, effectiveness, and sustainability of cooperation.

8.72.Each foreign partnership is entered into one of the following development stages:

Stage	Cooperation status
0	There is no transaction or practical activity.
1	Memorandum signed, but practical activities have not begun
2	A separate event, meeting, or initial activity was held
3	Mobility, project, joint learning or other regular activity is available
4	Have measurable academic, scientific, or financial results
5	The cooperation is stable, multi-directional and has reached the level of strategic partnership.

OFFICIAL TRANSLATION

8.73. The overall quality of international cooperation activities is assessed on a 100-point scale in the following areas:

Code	Assessment direction	Maximum score
XH-1	Soundness of international strategy and partner portfolio	15
XH-2	Legal quality and practical effectiveness of contracts	15
XH-3	Academic mobility of students and faculty	20
XH-4	Quality of co-educational programs	15
XH-5	Support for foreign students and professionals	10
XH-6	International projects, grants and funds raised	15
XH-7	Monitoring, reporting and collaboration sustainability	10
	Total	100

8.74. The overall result is interpreted as follows:

Total points	Status of international cooperation
86–100	International cooperation is systematic, effective and sustainable
71–85	Cooperation is mostly effective, some areas need to be developed
51–70	Collaboration results are uneven, significant improvements are needed
0–50	International cooperation is largely formal or ineffective

8.75. Recording a false collaboration result, organizing a joint program with a partner whose accreditation or status is not confirmed, conflict of interest in the mobility selection, sending a student without a Learning Agreement, unjustified non-recognition of mobility credits, or misuse of international project funds are considered critical non-compliance.

8.76. In the event of a critical non-conformity being identified, a conclusion of full compliance with the requirements of the standard will not be given, regardless of the high overall score.

8.77. The effectiveness of international cooperation agreements and partnerships is assessed based on Appendix 8.1 - "Register for assessing the level of development of the international cooperation portfolio and partnerships."

OFFICIAL TRANSLATION

8.78. The annual results of the university's international activities are summarized on the basis of Appendix 8.2 - "International Cooperation Effectiveness and Quality Monitoring Panel".

9. QUALITY ASSURANCE STANDARDS IN ECONOMIC AND FINANCIAL ACTIVITIES AND RESOURCE MANAGEMENT

Standard requirement

The university carries out economic and financial activities based on the principles of legality, financial stability, purposefulness, economy, transparency, and accountability.

Management of financial resources should serve the University's strategic goals, educational programs, research activities, student needs, and infrastructure development priorities.

The quality of economic and financial activities is assessed not only by the amount of funds spent, but also by the justification of expenses, the results obtained, the efficiency of resource use, the management of financial risks, and their impact on the quality of education.

Financial planning and budgeting

9.1. The university's annual income and expenditure estimate is formed based on the development strategy, annual work plan, state tasks, and the justified needs of structural divisions.

9.2. The annual estimate is developed by the Planning and Finance Department in collaboration with relevant structural divisions, reviewed by the University Council and the Supervisory Board, and approved by the rector within the established powers.

9.3. Faculties, departments, and structural divisions present their financial needs along with the purpose, necessity, expected result, and estimates of the expenditure.

9.4. When planning funds, salaries and scholarships, the educational process, laboratories and equipment, information technology, repairs, student housing, scientific activities, and international cooperation are taken into account as priority areas.

9.5. If new or urgent needs arise during the year, changes to the estimate and reallocation of funds will be made based on the current procedure and approved authorities.

Income and expense management

9.6. The university's income is formed from the state budget, payment-contract funds, grants, business contracts, educational exports, rent, paid services, commercialization, sponsorship, gratuitous support, and other sources not prohibited by law.

9.7. The university will take measures to diversify its sources of income, increase extrabudgetary revenues, and reduce excessive dependence on a single source in order to ensure financial stability.

9.8. Expenditures are made within the framework of an approved estimate, contract, settlement, and other supporting documents.

9.9.When spending funds, the necessity of the expense, the reasonableness of the price, the expected result, and the impact on educational, scientific, or social activities are taken into account.

9.10.The implementation of the financial plan is analyzed by comparing the plan and actual results on a monthly, quarterly, semi-annual, and annual basis.

Payment-contract receipts and debt

9.11.Student quota, payment-contract agreements, receipts and debt status are monitored by the Registrar's Office in collaboration with financial departments.

9.12.Payment information must be reflected in HEMIS, kontrakt.edu.uz, and other relevant information systems in a timely and accurate manner.

9.13.The processes of informing students with contractual debt, clarifying information, and working with debt are carried out based on student rights, contract terms, and applicable procedures.

Public procurement and contract management

9.14.Public procurement is carried out based on electronic systems, procedures, and competition principles established by law.

9.15.The need for procurement is justified by the Department for the Formation of the Material Base and Work with Economic Contracts and the interested structural unit.

9.16.The procurement specifications clearly state the functional characteristics, quality requirements, quantity, warranty, delivery time, and conditions of use of the product, work, or service.

9.17.When choosing a supplier, along with price, product quality, warranty period, technical support, delivery time, and ability to fulfill contractual obligations are also taken into account.

9.18.Procurement processes are carried out by an authorized procurement commission or responsible persons. The Chief Auditor examines the financial and control risks in procurement within the scope of his authority.

9.19.The delivered goods, performed work or provided service are inspected by the relevant authorities and accepted on the basis of the act, invoice or other supporting documents. In case of violation of contractual obligations, the established fines and other legal measures are applied.

Asset and infrastructure management

9.20.A unified accounting and inventory system is maintained for the university's fixed assets, equipment, buildings and structures, and other property.

9.21.The availability, technical condition, and compliance of assets with accounting data are checked during semi-annual and annual inventory processes.

9.22.The transfer, repair, write-off, or other disposal of equipment from one unit to another is carried out on the basis of relevant acts, orders, and accounting documents.

9.23.Obsolete, unused, redundant, or inefficiently used equipment is identified and a decision is made to reallocate, repair, modernize, or write off it.

9.24.The needs for the repair and development of educational buildings, laboratories, student housing, sports facilities, the Darband training and practical base, and other facilities are reflected in the annual estimates and infrastructure plans.

Energy and utility resource use

9.25.The consumption of electricity, gas, water, and other utility resources is regularly monitored based on digital meters and relevant control data.

9.26.The Chief Energy Officer, Chief Engineer, and Technical Operations and Economics Department manage energy consumption, engineering networks, technical malfunctions, and resource conservation measures within their respective areas of responsibility.

9.27.The production volume, technical condition, and economic efficiency of solar energy capacities, energy-saving equipment, and other resource-saving technologies are analyzed separately.

Internal control, audit and financial risks

9.28.The Auditor General audits economic and financial transactions, procurement, contracts, assets, and the internal control system within the scope of his authority.

9.29.The financial activities of the university may be audited by the treasury, the ministry, external audit, and other authorized bodies in accordance with the procedure established by law.

9.30.A plan of action is developed for deficiencies identified during internal or external audits, indicating the cause of the problem, the responsible executor, the deadline for implementation, and supporting evidence.

9.31.In the event of a financial error, illegal expenditure, overpayment or material damage, the issue of recovery or recovery of funds, correction of accounting records and liability of the guilty persons is considered on the basis of current legislation and internal documents. The Planning and Finance

Department maintains a register of financial risks and determines measures to reduce them.

Powers and responsibilities

9.32. The Vice-Rector for Finance and Economic Affairs provides overall leadership for economic and financial activities, financial planning, infrastructure and resource management.

9.33. The planning and finance department is responsible for formulating estimates, analyzing the implementation of the financial plan, forecasting income and expenses, financial risks, and general economic indicators.

9.34. Accounting ensures the proper management of funds, accounts, fixed assets, payments, accounts receivable and payable, and financial statements.

9.35. The Department of Formation of Material Base and Work with Economic Contracts coordinates the processes of formation of procurement needs, technical specifications, contracts and material supply. The Registrar's Office participates in monitoring payment-contract receipts and arrears.

9.36. The Technical Operation and Economic Department, the Chief Power Engineer, the Chief Engineer, the Civil and Labor Protection Department, and the Darband Training and Practice Directorate are responsible for the targeted and effective management of the buildings, structures, equipment, security, and utility resources under their control.

Monitoring, reporting and transparency

9.37. The results of economic and financial activities are considered at meetings under the rector, at the University Council and the Supervisory Board within the framework of their powers.

9.38. The annual general economic and financial report is prepared by the relevant structural divisions under the leadership of the Vice-Rector for Finance and Economic Affairs. The report reflects income and expenses, estimate execution, contract revenues, debt, purchases, repairs, assets, energy consumption, savings and efficiency indicators.

9.39. In cases where plan indicators are not met or resources are used inefficiently, written instructions and corrective measures are assigned to the responsible units. Financial information that must be publicly disclosed in accordance with the legislation is posted on the official information sources of the University.

Assessing the implementation of standards

9.40. The implementation of these standards is assessed, firstly, based on the fulfillment of mandatory financial and legal requirements, and secondly, on financial stability and efficiency of resource use.

OFFICIAL TRANSLATION

9.41. Critical non-compliances include spending based on unapproved estimates, circumventing procurement procedures, falsifying financial information, underreporting assets, spending without purpose, accepting a contract outcome without justification, or intentionally concealing an audit deficiency. If a critical non-compliance exists, a full compliance conclusion will not be issued, regardless of the overall result.

9.42. Financial sustainability and resource efficiency are assessed based on Annex 9.1 - “Financial Sustainability and Resource Efficiency Dashboard”, and the life cycle of procurement, contracts and assets is assessed based on Annex 9.2 - “Procurement, Contract and Asset Management Control Card”.

ANNEX 9.1: Financial Sustainability and Resource Efficiency Dashboard

A. General information

Indicator	Information
Reporting period	
The unit or activity being evaluated	
Approved estimate date	
Responsible Vice-Rector	
Departments that prepared the report	
Evaluation date	

B. Key financial indicators

Cod e	Indicator	Calculation content	Maximu m score	Pla n or goa l	Actua l result	Completi on percentag e	Calculate d score	Not e
M-1	Implementatio n of the revenue plan	Actual income ÷ planned income	15					
M-2	Diversification of income sources	Share and growth of non-contractual revenues	10					
M-3	Cost estimates and compliance with priorities	Targeted spending on approved areas	10					
M-4	Accounts receivable	Reduction in overdue debt	10					

OFFICIAL TRANSLATION

	and payable management							
M-5	Timely payment of salaries, stipends and mandatory payments	Percentage of payments made on time	10					
M-6	Procurement and contracting efficiency	Savings and timely execution of contracts	10					
M-7	Asset utilization efficiency	Percentage of assets in operation and in intended use	10					
M-8	Implementation of maintenance and infrastructure plans	Percentage of projects completed on time and with high quality	10					
M-9	Energy and utility resource efficiency	Consumption reduction and alternative energy results	10					
M-10	Audit Deficiency Correction and Transparency	Closed assignments and published information	5					
	Total		100					

Calculation procedure

In positive indicators:

Calculated score = actual result ÷ plan × maximum score.

The result will not exceed the maximum score.

In terms of debt, energy consumption, or other indicators that need to be reduced:

Calculated score = set goal ÷ actual result × maximum score.

The percentage of fulfilled requirements for quality indicators is determined in percentage.

OFFICIAL TRANSLATION

C. Interpretation of financial position

Total points	Financial situation	Management summary
90–100	Stable and efficient	Resources are managed purposefully, results are stable
75–89	Basically stable	Needs development in some indicators
60–74	There is a risk of financial weakness	Targeted corrective measures are required
0–59	High financial risk	Comprehensive measures and enhanced control are needed

D. Financial risk situation

Risk	Probability: low/medium/ high	Impact: low/medium/ high	Current measure	Responsible	Next inspection date
Decrease in contract revenues					
Overdue accounts receivable					
Increase in prices and cost of services					
Construction or repair delays					
Underutilization of grant funds					
Loss or damage to an asset					
Increased energy expenditure

10. QUALITY ASSURANCE STANDARDS IN HUMAN RESOURCE MANAGEMENT

Standard requirement

The University forms a sufficient number of qualified, responsible and professionally developed staff to effectively implement its mission, strategic goals, educational programs, research activities and management tasks.

Human resource management includes identifying staff needs, conducting open and fair selection, hiring, assigning tasks, adapting new employees, evaluating performance, professional development, motivating, forming a personnel reserve, and protecting labor rights.

Professors and teachers play a key role in the quality implementation of educational programs, the achievement of expected educational outcomes by students, and the development of the University's scientific potential. Therefore, special requirements are placed on their expertise, professional competence, pedagogical skills, scientific activity, and academic integrity.

Human resource management is based on the principles of legality, openness, equal opportunities, selection based on professional qualifications, fairness, prevention of conflicts of interest, protection of personal data, and continuous professional development.

Planning human resource needs

10.1. The university determines the quantitative and qualitative needs for staff based on its development strategy, educational programs, student contingent, academic workload, scientific and managerial tasks, and available financial resources.

10.2. When determining the need for professors, the subjects and modules taught, the language of instruction, the number of academic groups, the scientific potential of professors, the correspondence of subject and specialty, and the need for practical experience are taken into account.

10.3. The head of the department analyzes the current faculty, teaching load, vacancies, subject distribution, and needs for the upcoming academic year.

10.4. The Faculty, the Academic and Methodological Department, and the Human Resources Department study the needs of the departments within their competence and coordinate them with staffing levels and financial capabilities.

10.5. Before creating a vacant position, an assessment is made of the existence of a real organizational or academic need for the position, the absence of duplication of duties, and the optimal distribution of workload among existing employees.

Recruitment and selection of employees

10.6. Recruitment of employees is carried out based on the nature of the position, current qualification requirements, and procedures established by law.

10.7. Vacant positions of professors and teachers are announced in accordance with the established procedure in cooperation with the Personnel Department, the Academic and Methodological Department, and the relevant department.

10.8. The vacancy announcement will indicate the position title, relevant department or area of activity, qualification requirements, specialty, academic degree, work experience, required documents, and selection deadlines.

10.9. Requirements for candidates should be proportionate to the actual duties of the position and should not include unreasonable restrictions or conditions tailored to a specific individual.

10.10.Candidates' documents are received by the Secretary of the University Council, checked for completeness, and sent to the appropriate department in accordance with the established procedure.

10.11.When selecting administrative, technical and support staff, job descriptions, professional qualifications, work experience, digital skills and ability to perform job duties are taken into account.

10.12.The influence of kinship, personal connections, social origin, gender, nationality, or other factors unrelated to professional activity is not allowed in the selection and recruitment processes.

10.13.A person with a conflict of interest should not participate in evaluating, discussing, or voting on a candidate.

Qualifications of the professor-teacher and their relevance to the subjects

10.14.The candidate's education, specialty, academic degree, scientific specialization, pedagogical and professional experience are studied in terms of their suitability for the position they are planning to occupy and the subjects they will teach.

10.15.The correspondence of the subject and specialty is not determined solely by the similarity of the name of the subject or specialty in the diploma. The candidate's field of knowledge, scientific and pedagogical activities, publications, professional certificates, advanced training, and practical experience are also taken into account.

10.16.The candidate's suitability for the subjects taught is discussed at the department meeting, and a reasoned conclusion is recorded in the minutes.

10.17.These compatibility requirements also apply when distributing the subject load to a professor-teacher. It is not allowed to assign subjects to an unsuitable specialist solely to fill an empty load.

Open lesson and selection process

10.18.A candidate for the position of professor-teacher conducts an open lesson in accordance with the established procedure.

10.19.In an open lesson, the candidate's knowledge of the subject content, clear presentation of the material, use of modern pedagogical and digital methods, student engagement, organization of questions and answers and assessment, and professional culture are evaluated.

10.20.The results of the open lesson are formalized based on appropriate criteria and are taken into account along with other documents when forming the department's recommendation.

10.21.The candidate's documents, subject-specialty correspondence, scientific and pedagogical results, and open lesson summary will be reviewed at a department meeting, and later by the Faculty Council.

10.22.The final selection of the candidate recommended by the Faculty Council will be made by secret ballot at the University Council.

10.23.The results of the competition are formalized in the minutes of the University Council. An employment contract is concluded with the successful candidate, and an order on employment is signed by the rector.

New employee onboarding

10.24.The newly hired employee is introduced by the Human Resources Department to the employment contract, job description, internal labor regulations, labor protection, ethics, professional responsibility, and other relevant internal documents.

10.25.The relevant structural unit explains to the new employee his/her duties, reporting procedures, information systems used, service processes, and the priorities of the unit's activities.

10.26.The new professor will be introduced by the department to the educational program, curriculum, subject syllabus, HEMIS, assessment procedures, independent learning, final examination, and academic integrity requirements.

10.27.If necessary, a new professor or one with insufficient pedagogical experience is assigned an experienced mentor or provided with methodological assistance.

Job duties and workload

10.28.The duties of employees are clearly defined based on the job description, employment contract, and the activities of the structural unit.

10.29.The academic, teaching-methodological, scientific, organizational, and educational activities of professors and teachers should be planned in a balanced manner.

10.30.When distributing the workload, the employee's position, qualifications, scientific and pedagogical activities, the nature of the disciplines, and other job duties are taken into account.

10.31.It is not allowed to assign an employee additional duties that are not related to his/her job duties, are permanent and unjustified.

Performance evaluation and KPI

10.32.The performance of professors and teachers is evaluated based on the quality of education, scientific effectiveness, educational and methodological activities, international cooperation, student results, professional development, and contribution to the University's strategy.

10.33.The performance of professors and teachers is evaluated every six months based on the KPI system approved by the University.

10.34.KPI indicators and calculation procedures should be communicated to faculty members before the start of the evaluation period.

10.35.The KPI assessment is not limited to the number of publications or a single type of activity. The quality of education, teaching and methodological activities, scientific results, student achievements, professional development and strategic contribution are comprehensively taken into account.

10.36.Only verifiable and reliable evidence is used to validate KPI results. The same criteria are applied equally to all faculty members in the same situation.

10.37.KPI results are used to identify strengths, identify professional development needs, recognize best practices, and assign bonuses in accordance with the approved procedure.

10.38.The final evaluation of a professor's performance should not be based solely on one of the following: KPIs, student questionnaires, number of articles, or open lesson results.

Studying the quality of pedagogical activity

10.39.The pedagogical activity of a professor-teacher is studied through open lessons, peer lesson analysis, observation by authorized professors-teachers, analysis of syllabus and teaching materials, student results, assessment tools, and questionnaires.

10.40.Lesson analysis takes into account the course's compliance with the syllabus and learning outcomes, scientific and methodological level, student engagement, digital technologies, independent learning, assessment, and academic integrity.

10.41.The student questionnaire is considered additional evidence of faculty performance and is interpreted in conjunction with other academic data.

10.42.Lesson analysis primarily serves to improve pedagogical activities, provide methodological support, and popularize best practices. Appropriate measures are determined for serious or repeated shortcomings.

Professional development and training

10.43.The university creates conditions for the development of professional knowledge, pedagogical and managerial competencies, digital skills, scientific potential, and knowledge of foreign languages of its employees.

10.44.Professors and teachers undergo advanced training at least every three years in accordance with the established procedure. The direction of advanced training is selected in accordance with the subjects taught, assessment results, and professional needs.

10.45.The schedule for sending professors and teachers for advanced training is developed by the Academic and Methodological Department in collaboration with the relevant faculties and departments.

10.46.Professional development can also be carried out through seminars, training, internships, master classes, open lessons, experience sharing, digital technologies, foreign languages, and scientific and methodological activities.

10.47.The result of advanced training is assessed not only by the presence of a certificate, but also by the application of the acquired knowledge and methods in the employee's work.

10.48.Individual professional development measures are determined for the professor or employee based on significant deficiencies identified in the performance evaluation.

Scientific activity and research-based teaching

10.49.The scientific activities of professors and teachers are supported as an important condition for the development of educational programs and subject content.

10.50.Professors and teachers should use their research results and modern scientific achievements in the field in the educational process and involve students in research activities.

Personnel reserve and professional growth

10.51.The university forms a human resource pool to identify promising professors, teachers and staff and develop their professional and managerial competencies.

10.52.When entering the personnel reserve, the employee's professional qualifications, performance results, work experience, organizational skills, academic integrity, and contribution to the development of the University are taken into account.

10.53.The formation and updating of the personnel reserve is carried out by the Human Resources Department. Inclusion in the reserve does not give the right to automatic appointment to the position.

Academic integrity and professional responsibility

10.54.In their work, employees must adhere to the requirements of academic integrity, scientific ethics, impartiality, professional responsibility, service discipline, and respect for the rights of students and colleagues.

10.55.Plagiarism, bias in evaluation, unwarranted alteration of results, concealment of conflicts of interest, discrimination, harassment, abuse of official authority for personal gain, and corrupt practices are not permitted.

10.56.Professional or academic misconduct will be reviewed in an impartial and evidence-based manner based on relevant University codes, internal documents, and applicable legislation.

Labor rights and appeals

10.57.Employees have the right to appeal to the University management, the Human Resources Department, the Trade Union Committee, and other authorized bodies regarding labor rights, working conditions, performance evaluation, incentives, workload, and other service relations.

10.58.When considering applications, confidentiality, impartiality, non-intimidation of the applicant, and timely response are ensured.

10.59.The trade union committee participates, within the scope of its powers, in protecting the labor rights and legitimate interests of employees.

Powers and responsibilities

10.60.The Rector is responsible for the University's human resources policy and key personnel decisions.

10.61.The HR department summarizes the needs for employees, formalizes labor relations, maintains personal documents, organizes selection processes, and maintains a personnel reserve.

10.62.The Vice-Rector for Academic Affairs and the Academic and Methodological Department coordinate the academic needs of professors and teachers, their workload, subject-specialty correspondence, and professional development processes within their competence.

10.63.The dean of the faculty and the head of the department are responsible for the adequacy of the teaching staff, the distribution of disciplines, the quality of pedagogical activities, the adaptation and professional development of new teachers.

10.64.The Department of Education Quality Control monitors the impact of faculty activities on the quality of education, student outcomes, and educational programs within its mandate.

10.65.The University Council considers the selection of professors and other issues related to human resources within its competence.

Monitoring and improvement

10.66.Human resource management processes are regularly analyzed based on staff composition, vacancies, subject-specialty compatibility, KPIs, professional development, employee turnover, appeals, and satisfaction results.

10.67.Monitoring takes into account not only the number of employees, but also their qualifications, suitability for tasks, workload, performance results, and professional development dynamics.

OFFICIAL TRANSLATION

10.68.The department responsible for the identified deficiencies, the action to be taken, the deadline, and the expected result are determined.

10.69.Employee opinions and complaints regarding the transparency and impartiality of the selection, assessment, promotion, and professional development processes are analyzed.

Assessing the implementation of standards

10.70.The implementation of these standards is assessed based on a three-criteria balance model of human resource management:

Criterion	Content	Level
M - compatibility	Compliance of the process with legislation, internal documents and established procedures	0–2
S - capacity	Availability of necessary qualified personnel, competencies and organizational capabilities	0–2
N - efficiency	Practical outcome of the process and impact on improvement	0–2

The levels are defined as follows:

- **0-** the requirement has not been met or there is no evidence;
- **1-** the requirement is partially fulfilled, there are significant shortcomings;
- **2-** the demand is fully and consistently fulfilled.

10.71.The score for each assessment area is determined based on the following formula:

Calculated score = (M + S + N) ÷ 6 × maximum score.

10.72.The quality of human resource management is assessed in the following areas:

Code	Assessment direction	Maximum score
IR-1	Staffing planning and staffing adequacy	15
IR-2	Transparency of selection and recruitment	15
IR-3	Subject-specialization compatibility and workload	20
IR-4	Comprehensive assessment of performance and pedagogical quality	20
IR-5	Advanced training, professional development and personnel reserve	15
IR-6	Academic integrity, labor rights, and employee opinion	15
	Total	100

10.73.The final result is interpreted as follows:

Total points	The state of human resource management
86–100	The system is stable, impartial and development-oriented
71–85	The system is mostly effective, some improvements are needed
51–70	There are significant shortcomings, targeted measures are required
0–50	The human resources management system needs a comprehensive review

10.74.Hiring based on false documents, illegally changing the results of the selection process, concealing a conflict of interest, systematically assigning subjects to a person with an inappropriate specialty, falsifying KPI evidence, and discriminating or pressuring an employee to apply are considered critical non-compliance.

10.75.If there is a critical non-conformity, a conclusion of full compliance with the requirements of the standard will not be given, regardless of the high overall score.

10.76.Staffing and subject-specialty compatibility are analyzed based on Appendix 10.1 - "Human Resource Potential and Subject-Specialty Compatibility Matrix".

10.77.The activities and professional development needs of the professor-teacher are summarized on the basis of Appendix 10.2 - "Comprehensive review of the activities of the professor-teacher and individual development card".

11. STANDARDS FOR ENSURING QUALITY IN YOUTH SUPPORT, SPIRITUAL-EDUCATIONAL AND SOCIAL ACTIVITIES

Standard requirement

The university creates a safe, inclusive, and supportive environment for students' learning, personal development, social adjustment, and mental and physical well-being.

This activity includes working with youth, tutoring, spiritual and educational activities, psychological and social assistance, material support, student housing, medical services, sports, culture, creativity, and support for student initiatives.

The quality of activities is assessed not only by the number of events held, but also by student coverage, needs met, appeals resolved, student satisfaction, and social outcomes achieved.

Working with youth and adapting students

11.1. Youth work, spiritual, educational, and social activities are planned based on the University's development strategy, student needs, and existing social risks.

11.2.An orientation program will be organized for first-year students, introducing them to University life, the educational process, services, internal procedures, and application options.

11.3.The adaptation process involves faculties, the Registrar's Office, the Information Resource Center, tutors, and other relevant departments.

11.4.Tutors are assigned, as a rule, at the rate of one for every 150 students, in accordance with current standards.

11.5.The tutor participates in adapting students to the University environment, identifying their problems, supporting their initiatives, and directing them to appropriate services.

11.6.When an academic, family, social, financial, or psychological problem is identified in a student, the tutor will refer the issue to the appropriate department, depending on its nature.

11.7.Tutors' performance is evaluated quarterly, semi-annually, and annually based on work with students, resolution of appeals, support for initiatives, and reporting results.

Psychological and social support

11.8.Students can contact a psychologist in person, by phone, electronic means of communication, or through a tutor.

11.9.Psychological counseling is provided based on the principles of voluntariness, confidentiality, professional ethics, and respect for the dignity of the student.

11.10.Information regarding the student's personal or psychological condition will only be provided to relevant persons with his or her consent or in necessary cases provided for by law.

11.11.Students who are orphans and deprived of parental care, disabled, low-income, have lost their breadwinner, or are in other difficult social situations are identified based on relevant documents and individual needs.

11.12.The outcome of the individual psychological or social assistance provided to the student is monitored again within a specified period.

11.13.In cases where there is an immediate threat to the life or safety of a student, immediate protective measures and referral to appropriate authorized services will be taken.

Financial assistance and social support

11.14.Financial assistance may be provided to students in need from University funds, the Student Incentive Fund, sponsorships, and other sources not prohibited by law.

11.15.The allocation of financial assistance is carried out on the basis of approved criteria, documents confirming the student, and the conclusion of the relevant commission or authorized body.

11.16.Documents related to financial assistance are prepared with the participation of the Department of Youth Work, Spirituality and Enlightenment and the primary organization of the Youth Union of Uzbekistan and approved by the rector.

11.17.When allocating financial assistance, impartiality, need, equal opportunity, and transparency are ensured.

Student accommodation

11.18.Applications for student housing are accepted through an authorized electronic system, including the kontrakt.edu.uz platform.

11.19.Accommodation of students is carried out based on available places and priority categories established in current documents.

11.20.Student dormitories provide sanitary, fire and technical safety, living conditions, opportunities for independent learning and recreation.

11.21.Responsible staff at each student residence will review conditions, safety, and student complaints on a regular basis, and daily as needed.

11.22.Student councils or other forms of self-government operate in student residences and submit proposals for improving living conditions.

Medical care

11.23.The university's medical service department provides first aid to students and staff and, if necessary, refers them to appropriate medical facilities.

11.24.Medical service activities also include sanitary and preventive explanations and the promotion of a healthy lifestyle, within the framework of available personnel and powers.

11.25.In case of medical emergencies, a procedure for emergency medical care and cooperation with regional medical institutions is provided.

Spiritual and educational activities and student initiatives

11.26.Spiritual and educational activities are aimed at developing students' civic responsibility, legal culture, patriotism, tolerance, and social activism.

11.27.Events are planned based on student needs, current social issues, and educational goals.

11.28.The quality of an event is not judged by its number or list of participants, but by its content, student engagement, feedback, and the results achieved.

11.29.The university supports the activities of the primary organization of the Youth Union of Uzbekistan, the Student Council, faculty leaders, volunteer groups, student clubs and circles.

11.30.Students have the right to come up with a new club, project, or initiative, present it to the appropriate department, and receive organizational and resource support in accordance with the established procedure.

11.31.When supporting student initiatives, their relevance, scope, safety, resource needs, and expected social outcome are taken into account.

Safe environment and prevention

11.32.The University implements preventive measures to prevent crime, violence, harassment, discrimination, harmful habits, and other dangerous situations.

11.33.Complaints about such cases are considered based on the principles of confidentiality, promptness, impartiality, and ensuring the safety of the victim.

11.34.Harassment, harassment, or negative treatment of a student or employee who has filed a complaint will not be tolerated.

Sports, culture and creative activities

11.35.Sports sections, cultural and creative circles are organized based on student interests and available opportunities.

11.36.Their effectiveness is assessed based on coverage, regular participation, competition and contest results, student satisfaction, and sustainability of activities.

Powers and responsibilities

11.37.The First Vice-Rector for Youth Affairs and Spiritual and Educational Affairs provides overall leadership for activities in this area.

11.38.The Department of Youth Work, Spirituality and Education coordinates youth policy, tutoring, spiritual and educational activities, student initiatives, social support, and summarized reports.

11.39.The Student Housing Department organizes housing applications, placement, living conditions, and housing activities.

11.40.The psychologist is responsible for providing professional psychological counseling to students, identifying at-risk situations, and referring them to appropriate services.

11.41.Faculty deans and tutors identify student problems, provide guidance, involve students in activities, and provide individual monitoring.

11.42.Medical services, sports, culture and other relevant departments are responsible for the quality and safety of services in their areas.

Monitoring and improvement

OFFICIAL TRANSLATION

11.43.Youth and social activity results are analyzed on a monthly, quarterly, semi-annual, and annual basis.

11.44.Monitoring takes into account student satisfaction, applications, tutoring, psychological support, housing, financial support, events, clubs, sports, and creative activities.

11.45.The annual summary report is prepared by the Department of Youth Work, Spirituality and Enlightenment.

11.46.The results are reviewed at meetings with the rector and the University Council. Measures are determined for the identified problems, indicating the responsible parties, deadlines, and date of re-monitoring.

Assessing the implementation of standards

11.47.These standards are assessed based on the availability of services, their accessibility to students, the speed of response to requests, their effectiveness, and their impact on student well-being.

11.48.The assessment is carried out on a 100-point system in the following areas:

Code	Assessment direction	Maximum score
Y-1	Student adaptation and tutoring activities	15
Y-2	Psychological and social support	15
Y-3	Financial assistance and social protection	10
Y-4	Student accommodation conditions and management	15
Y-5	Spiritual and educational activities and student initiatives	15
Y-6	Sports, culture and creative activities	10
Y-7	Safe environment and prevention	10
Y-8	Monitoring, student feedback and improvement	10
	Total	100

11.49.The final result is interpreted as follows:

Total points	Activity status
86–100	The support system is stable and tailored to the student's needs
71–85	The system is mostly effective, some improvements are needed
51–70	There are significant shortcomings in the services
0–50	There is a high risk to the well-being and safety of students

OFFICIAL TRANSLATION

11.50. Failure to provide assistance to a student in a dangerous situation, unlawful disclosure of psychological information, falsification of financial aid or housing allocations, and concealment of a complaint of interest, violence, or harassment are considered critical noncompliance.

11.51. If there is a critical non-conformity, a full compliance conclusion will not be given, regardless of the high overall score.

11.52. Student well-being and quality of services are assessed based on Appendix 11.1, and the individual support and guidance process is assessed based on Appendix 11.2.

ANNEX 11.1: Student Wellbeing and Support Services Quality Profile

Cod e	Direction	Maximu m score	Coverag e	Eas e of use	Efficienc y	Stude nt opinio n	Calculate d score	The main proble m
Y-1	Adaptation and tutoring	15

12. QUALITY ASSURANCE STANDARDS IN INFORMATION MANAGEMENT AND DIGITAL SYSTEMS

Standard requirement

The university systematically forms, verifies, stores, analyzes information related to educational, research, financial, international, administrative, and social activities, and uses it to make management decisions.

The quality of information management is determined not by the quantity of information, but by its accuracy, completeness, relevance, interoperability, verifiability, and usefulness for decision-making.

Digital systems must be stable, secure, and user-friendly for users, preventing the loss, unauthorized modification, or disclosure of important information.

Purpose and principles of information management

12.1. The main goal of information management is to form a reliable information base for an objective assessment of the current state of the University's activities, monitoring development dynamics, timely identification of problems and risks, and making evidence-based management decisions.

12.2. Information management is based on the principles of accuracy, completeness, relevance, timeliness, comparability, auditability, confidentiality, and use within the scope of authority.

12.3. For each information and indicator, the source that forms it, the responsible unit, the person verifying it, the update frequency, and the purpose of use are determined.

12.4. A primary official source of information is identified for one indicator. The formation of information that is identical in content but contradictory by different departments is not allowed.

Indicator system and information passport

12.5. The university will form a system of indicators necessary for assessing strategic management, educational quality, and institutional effectiveness.

12.6. An information passport is maintained for each key indicator, which includes the following:

- indicator name and content;
- calculation formula;
- unit of measurement;
- primary source of information;
- the structural unit that owns the information;
- update and reporting frequency;
- inspection procedure;
- level of confidentiality of information;
- the management process used.

12.7.The composition of indicators is updated based on the University's strategy, educational programs, regulatory requirements, accreditation and ratings, internal monitoring, and the needs of stakeholders.

12.8.Indicators that are repetitive, do not serve practical decision-making, or cannot be reliably formulated, are reviewed.

Information gathering routes

12.9.The university collects and analyzes information in the following areas, among others:

1. Student admission and contingent movement;
2. Acquisition, GPA, and academic debt;
3. Transferring from course to course and dropping out;
4. Final certification and graduation;
5. Graduate employment;
6. Faculty composition and capacity;
7. Educational resources and their use;
8. Scientific and innovative activities;
9. International cooperation;
10. Economic and financial indicators;
11. Student and staff satisfaction;
12. Petitions, complaints and appeals;
13. Academic integrity cases;
14. Internal and external evaluation results;
15. Strategic development indicators.

Information systems and official sources of information

12.10.The university uses HEMIS, LMS, electronic platforms of the Registrar's Office, electronic archive, electronic library, financial accounting systems, and other relevant digital resources to form, store, and process information.

12.11.The Registrar's Office ensures the creation and maintenance of academic information regarding student enrollment, academic status, grades, GPA, debt, orders, transcripts, and student movement.

12.12.Financial and economic information is generated in "1C Accounting", UzASBO and other existing automated accounting systems.

12.13.The Strategic Development and Transformation Department summarizes information on the University's strategic indicators, development dynamics, changes in the internal and external environment, and institutional risks.

12.14.The Department of International Accreditation and Ratings, in collaboration with relevant departments, forms the necessary information for accreditation, rating, and international assessments.

12.15.The Education Quality Control Department collects and analyzes data on education quality, internal monitoring, student satisfaction, lessons, and assessment processes.

12.16.The Career Center generates information related to graduate employment, professional activities, and the labor market.

12.17.Faculties, departments and other structural divisions submit information related to their activities in the established form and within the established deadlines.

12.18.The Center for Digital Educational Technologies is responsible for the technical operation of information systems, and the content accuracy of the information entered into these systems remains the responsibility of the unit that owns the relevant information.

Information life cycle

12.19.The information management process covers the stages of primary data entry, verification, validation, updating, summarization, analysis, use, and storage.

12.20.Information is entered based on a primary document, official information system, or other reliable source.

12.21.Data is checked for accuracy and completeness before being used in a report or management decision.

12.22.When an error or inconsistency is detected in the information, the correction is made based on the supporting document and preserving the history of the change.

12.23.Unjustified alteration, concealment, destruction of data in information systems, or artificially changing the date of their formation is not permitted.

Data quality and inter-system compatibility

12.24.Data quality is assessed based on accuracy, completeness, timeliness of updates, inter-system compatibility, and auditability of changes.

12.25.Interrelated data in HEMIS, financial systems, Registrar's Office platforms, and other information resources are periodically compared.

12.26.If discrepancies are identified in student quotas, fees, orders, grades, or other important indicators, a comparative audit will be conducted by the relevant departments.

12.27. Measures will be taken to reduce the need to manually enter the same information repeatedly into different systems and tables, promote inter-system data exchange, and reduce human error.

12.28. Informal spreadsheets or separate lists should not replace the formal information system. Such spreadsheets should be used as an auxiliary tool when necessary.

Stakeholder feedback and analytical research

12.29. The opinions of students, alumni, faculty, employers, and other stakeholders are sought through surveys, interviews, meetings, expert evaluations, and other grounded methods.

12.30. Student surveys are organized by the Education Quality Control Department, graduate surveys by the Career Center, and employer surveys by faculties and departments within their respective jurisdictions.

12.31. The general methodological coordination of the questionnaires is carried out by the Education Quality Control Department.

12.32. Surveys are designed with questions that are understandable, objective, measurable, and allow for comparison across time periods.

12.33. Voluntary participation in surveys, respondent confidentiality, representativeness of results, and protection of personal data are ensured.

12.34. The survey results are not limited to showing overall percentages. They also identify the problem identified, its cause, and necessary improvement measures.

Using information in management decisions

12.35. Analytical data is used to identify problems and trends, assess risks, allocate resources, and improve operations.

12.36. The decision made based on information analysis is formalized in an order, protocol, report, or action plan.

12.37. The decision indicates the problem, the action to be taken, the responsible executor, the deadline, and the expected result.

12.38. The implementation of decisions is checked during the next monitoring period. Merely collecting information but not using it in management is not considered effective information management.

Access rights and information security

12.39. The right to access information is determined based on the user's job title, service authority, and the level of confidentiality of the information.

12.40. Users are only granted access to the information and functions necessary to perform their tasks.

12.41.When an employee's position or job responsibilities change or employment relationship is terminated, their access to information systems is immediately reviewed.

12.42.It is not allowed to provide personal logins and passwords to other persons, log in on behalf of another user, or circumvent restrictions.

12.43.Access to server rooms, data carriers, and areas where confidential information is stored will be restricted.

12.44.The history of significant changes, entries, and data editing made to information systems is recorded to the extent possible.

Backup and digital systems continuity

12.45.Backups of important electronic data are created at specified intervals and stored in a secure environment separate from the main system.

12.46.Along with the availability of a backup copy, the ability to restore data from it is also periodically tested.

12.47.A procedure for restoring services in the event of a technical failure, power or internet outage, cyber incident, and other emergencies regarding critical information systems will be established.

12.48.In cases where a systems outage affects users, the educational process, financial transactions, or academic data, the duration and consequences of the incident are recorded.

Information security incident management

12.49.Prompt action is taken when unauthorized access, data loss, malware, illegal disclosure of data, or other information security incident is detected.

12.50.The cause, scope, systems and data affected by the incident are identified, and measures are taken to prevent recurrence.

12.51.Information security incidents are recorded and analyzed with the participation of the Center for Digital Educational Technologies and other authorized units.

12.52.Hiding, not recording, or deliberately minimizing the impact of an incident is not allowed.

User support

12.53.Students and staff are provided with clear instructions and technical support on how to use information systems.

12.54.Technical requests, system errors, and service outages are recorded and the time and outcome of their resolution are monitored.

12.55.Repeated requests are analyzed as a sign of a general problem in the system or a lack of user skills.

Powers and responsibilities

12.56.The Center for Digital Educational Technologies provides servers, the Internet, information systems, access rights, backup, and technical information security.

12.57.Each structural unit is responsible for the accuracy, completeness, timeliness and updating of information related to its activities.

12.58.The technical administrator of the information system does not have the right to arbitrarily change the content of the information.

12.59.The Education Quality Control Department assesses the reliability of education quality indicators and the use of monitoring results within its competence.

12.60.The Strategic Development and Transformation Department summarizes strategic indicators and prepares analytical information for management.

Monitoring and improvement

12.61.Information management and digital systems performance is monitored based on data quality, timely reporting, system stability, technical calls, information security incidents, and user feedback.

12.62.Based on the monitoring results, measures will be determined to reduce duplicate reporting, strengthen data integration, increase the level of digitalization, strengthen information security, and develop the digital skills of employees.

12.63.Measures are developed for identified deficiencies, indicating the responsible department, implementation period, necessary resources, and expected results.

Assessing the implementation of standards

12.64.The implementation of these standards is assessed based on two interrelated indicators:

1. **Data Quality Index-** assesses the accuracy, completeness, relevance, inter-system compatibility, and verifiability of information.

2. **Digital Sustainability Index-** Assesses the status of systems continuity, information security, backup, recovery, and user support.

12.65.The overall assessment is based on the following structure:

Assessment direction	Maximum score
Data accuracy	15
Completeness of information	10
Timely update	10
Cross-system compatibility	10
Auditability of changes	10

OFFICIAL TRANSLATION

Using information in decision-making	10
Stable operation of systems	10
Access rights and information security	10
Backup and restore	10
Technical support and incident management	5
Total	100

12.66. The final result is interpreted as follows:

Total points	The state of information and digital management
90–100	Reliable, stable and fully serves management decisions
75–89	Basically reliable, some improvements needed
60–74	There are critical information or system risks
0–59	Insufficient reliability of information or continuity of systems

12.67. Intentional falsification or destruction of data, unlawful disclosure of personal information, maintaining access to a system by a terminated employee, failure to back up critical systems, or concealment of an information security incident are considered critical non-compliances.

12.68. If there is a critical non-conformity, a conclusion of full compliance with the requirements of the standard will not be given, regardless of the high overall score.

12.69. Key indicators and data quality are assessed based on Appendix 12.1 - “Information indicator passport and data quality control card”.

12.70. Digital systems stability and incidents are monitored based on Appendix 12.2 - “Register of Digital Systems Continuity and Information Security Incidents”.

ANNEX 12.1: Information indicator passport and data quality control card

A. Indicator passport

Indicator	Information
Indicator name	
Index content	
Calculation formula	
Unit of measurement	
Primary source of information	
Information system	
Responsible structural unit	
Information shaper	
Checker or approver	
Update frequency	

OFFICIAL TRANSLATION

Report deadline	
Privacy level	☐ open ☐ within the scope of service ☐ limited
The process using the indicator	

B. Data quality control

Quality criterion	Calculation or verification method	Result, %	Maximum score	Calculated score	Identified problem
Accuracy	$\frac{\text{Correct entries}}{\text{checked entries}} \times 100$		30		
Completeness	$\frac{\text{Required fields filled}}{\text{total required fields}} \times 100$		20		
Relevance	$\frac{\text{Records updated within the period}}{\text{records to be updated}} \times 100$		20		
Compatibility	$\frac{\text{Records matched with another system}}{\text{matched records}} \times 100$		15		
Auditability	Percentage of records with source and change history		15		

OFFICIAL TRANSLATION

Data Quality Index			100		
---------------------------	--	--	------------	--	--

Calculation procedure

Calculated score = quality criterion result ÷ 100 × maximum score.

C. Cross-system comparison

The system or source being compared	The result in the first source	The result in the second source	Difference	The reason for the difference	Corrective action

D. Result of using information

Issue identified as a result of the analysis	Decision made	Responsible	Deadline	Execution status

E. Final conclusion

Data Quality Index: _____ / 100

Result	Status
90–100	The information is reliable and useful for management decisions.
75–89	Mostly reliable, some adjustments needed
60–74	There are significant quality defects
0–59	Making important decisions based on information is risky

Recommendation:

- ☐ available
- ☐ can be used after correction
- ☐ re-verification required
- ☐ It is necessary to temporarily stop using

ANNEX 12.2: Digital Systems Continuity and Information Security Incident Register

A. Information system information

OFFICIAL TRANSLATION

Indicator	Information
Information system name	
The function of the system	
The department that owns the system	
Technical administrator	
User category	
Level of importance	☐ high ☐ middle ☐ low
Type of data to be stored	
Backup frequency	
Date of last recovery test	

B. System stability indicators

Indicator	Targeted goal	Actual result	Status	Note
System uptime			☐ good ☐ satisfactory ☐ dangerous	
Number of unplanned outages				
Total duration of interruptions				
Successful backup percentage				
Recovery test result				
Access rights reviewed during the period				
Technical appeals closed on time				

C. Information security incident

Indicator	Information
-----------	-------------

OFFICIAL TRANSLATION

Date and time of the incident	
Incident detection system	
Event type	☐ unauthorized access ☐ data loss ☐ malware ☐ disclosure ☐ other
The person or system that detected the event	
Brief description of the incident	
Affected users or data	
Severity of the incident	☐ low ☐ middle ☐ high ☐ critical
Immediate action taken	
System recovery time	

D. Analysis of the cause and effect of the incident

Direction of analysis	Conclusion
The main cause of the incident	
Organizational or technical weakness	
Data damage	
Impact on the educational or management process	
Probability of recurrence	

E. Corrective and preventive measures

Measure	Responsible department or person	Deadline	Necessary resource	Execution status	Efficiency check

F. Final closing

Incident:

- ☐ completely eliminated
- ☐ temporarily removed
- ☐ surveillance continues
- ☐ additional expertise is required

Measures to prevent recurrence of the incident were examined:

- ☐ yes

☐no

Responsible employee	Position	Signature	Date

13. STANDARDS FOR PUBLIC INFORMATION, TRANSPARENCY AND QUALITY ASSURANCE IN STAKEHOLDER ENGAGEMENT

Standard requirement

The University provides open, reliable, impartial and up-to-date information about its activities, educational programs, scientific results, development indicators, opportunities created for students and other issues of public interest.

Public awareness is not just about covering news and events. It should help stakeholders understand the University's activities, make informed choices about educational programs, use services, ask questions and make suggestions, and build trust in the University's activities.

Openness does not imply an obligation to disclose personal, service-related, commercial secret or legally restricted information. The openness of information provided to the public and the proportionality of confidentiality requirements are ensured.

Principles of openness and disclosure

13.1. The university regularly publishes information of public interest in accordance with legislation, institutional policy, and approved internal procedures.

13.2. The formation and dissemination of open information is based on the principles of legality, fairness, impartiality, relevance, speed, clarity, ease of use, and accountability.

13.3. Information provided to the public must accurately reflect the current state of the University and the results achieved.

13.4. It is not allowed to publish information that is unverified, misleading, one-sided, taken out of context, or unreasonably exaggerating the results of activities.

Information provided to the public

13.5. The legal status, organizational structure, leadership, governing bodies, strategic goals, structural divisions, and contact information of the university are openly available to the public.

13.6. Open information on educational programs shall reflect, at a minimum, the purpose of the program, the form of education, the duration of study, the qualifications awarded, the expected learning outcomes, and the graduate's professional opportunities.

13.7.Information about educational programs should be sufficient for applicants, students, parents, employers, and other interested parties to properly understand the content and opportunities of the program.

13.8.Applicants will be provided with timely official information about study areas, master's degree specialties, admission requirements, admission parameters, language of instruction, application procedure, and payment terms.

13.9.The academic calendar, key deadlines for the academic process, general assessment requirements, academic services, and other information important to students will be posted on relevant official channels.

13.10.Academic, social, psychological, medical, residential, sports, cultural, and vocational support services for students and the procedure for using them will be publicly announced.

13.11.General information is provided about faculty capacity, educational resources, the Information Resource Center, digital capabilities, and other institutional resources.

13.12.Information is provided on the status of national and international accreditation of educational programs, the results of external evaluations, and the improvement work being carried out on their basis, within the framework of the requirements of legislation and relevant organizations.

13.13.Graduate employment, collaboration with employers, research, innovation, international cooperation, and University development results are published in a summarized form.

13.14.The timely posting of financial, procurement, vacancy, government program, and other information required by law to be publicly disclosed is ensured.

Official news channels

13.15.Official information about the university's activities is distributed through the official website, media outlets, and official pages on Telegram, Instagram, Facebook, and YouTube platforms.

13.16.Information published on official news channels represents the official position of the University.

13.17.The opinions of individuals who are not authorized to make official statements or disseminate information on behalf of the University should not be interpreted as the official position of the University.

13.18.The main information on the university's official website is provided in Uzbek, Russian, and English.

13.19.The content of information published in different languages is consistent, terminology is used correctly, and translation quality is ensured.

13.20.Open information is logically structured, easy to search and use, mobile-friendly, and presented in the most inclusive way possible.

Procedure for preparing and publishing information

13.21.Structural divisions shall submit information important to the public regarding their activities to the Press and Information Service Department in accordance with the established procedure.

13.22.The structural unit that generated the information is responsible for its accuracy, completeness, relevance, and correspondence to supporting sources.

13.23.The Press and Information Service Department edits information from a methodological and communicative perspective, checks for compliance with official information policy, and publishes it on the appropriate channel.

13.24.Depending on the content of the information, it is coordinated with the head of the relevant structural unit or an authorized official.

13.25.The process of publishing open information includes the stages of preparing information, checking its accuracy, agreeing on it, editing it, considering confidentiality requirements, and posting it on an official channel.

13.26.Personal, service-related, or legally restricted information will be appropriately excluded or summarized before being released to the public.

13.27.A student's individual grades, academic status, health, psychological state, and other personal information are not published in open sources.

Relevance and updating of information

13.28.Information posted on the official website and social media is regularly revised.

13.29.Changes in leadership, organizational structure, admissions, educational programs, services, contact information, and other important information will be reflected as soon as possible.

13.30.Information that has lost its relevance will be updated, archived, or removed from use. It is not allowed to present old information as current information.

13.31.For each type of important public information, its update frequency and responsible department are determined.

Correction of incorrect information and official response

13.32.When an error, inaccuracy, or outdated information is detected in official information, the Press and Information Service Department, in cooperation with the relevant unit, checks and corrects it.

13.33.If the erroneous information could influence an important public decision, the correction will not be limited to a covert replacement, but, where necessary, a separate clarifying statement will be published.

13.34.When false or misleading information about the University's activities is disseminated in the media or social networks, the Press and Information Service Department prepares an official response based on verified evidence.

13.35.Official response should be prompt, fact-based, impartial, and clearly convey the essence of the problem.

13.36.In cases of unauthorized access to the official information channel, illegal alteration of information, or dissemination of false information, the Press and Information Service Department will take measures in cooperation with the Center for Digital Education Technologies and other authorized units.

Communication with stakeholders

13.37.The university provides two-way communication with the public and creates opportunities for interested parties to ask questions, make suggestions, submit applications, or report errors.

13.38.Public appeals are accepted through the virtual reception, the rector's appeal system, official email, social networks, and other channels provided for by law.

13.39.Applications are forwarded to the appropriate structural unit based on their content and are reviewed within the established deadlines.

13.40.Repeated questions and requests are analyzed as a sign of insufficient, unclear, or inconvenient access to public information.

13.41.Meetings, open dialogues, briefings and discussions may be organized with students, parents, alumni, employers, media and other interested parties.

13.42.Important ideas and suggestions received from stakeholders are conveyed to relevant departments and used to improve the University's activities.

Public accountability

13.43.The University Rector annually presents a report on the results of the past period, current problems, strategic directions, and future tasks, with the participation of the University team and representatives of the public.

13.44.The main content of the annual report is made available to the public on the official website and social media.

13.45.The annual report does not disclose confidential, proprietary, or personal information that is subject to disclosure restrictions.

Powers and responsibilities

13.46.The Press and Information Service Department is responsible for implementing the University's official information policy, editing and publishing open information, working with the media, and preparing official relations.

13.47.Structural divisions provide information on their activities in a timely, complete and truthful manner.

13.48.The Center for Digital Educational Technologies ensures the technical operation, access rights, and information security of the official website and other digital information resources within its jurisdiction.

13.49.Managers are responsible for the content and accuracy of the information published regarding their unit.

Monitoring and improvement

13.50.The public awareness and communication system is regularly monitored by the Press and Information Service Department in collaboration with relevant departments.

13.51.Monitoring takes into account the completeness, accuracy, relevance, speed of update, multilingualism, ease of use, public engagement, appeals, errors, and official relations of open information.

13.52.The number of users, views, and activity on social networks is an additional indicator of the effectiveness of information policy, but a high number of views does not automatically confirm the quality and accuracy of information.

13.53.Based on the monitoring results, measures will be determined to expand the content of open information, update outdated information, improve multilingualism, website usability, communication channels, and develop the communicative competencies of employees.

13.54.The responsible executor, deadline for completion, expected result, and re-monitoring date for identified deficiencies are indicated.

Assessing the implementation of standards

13.55.The implementation of these standards is assessed based on two interrelated indices:

- **Openness index - 60 points;**
- **Public Relations Index - 40 points.**

13.56.The quality of openness and communication is assessed based on the following criteria:

Code	Assessment direction	Maximum score
O-1	Completeness of open information	15
O-2	Reliability and verification of information	15
O-3	Relevance and timely updating of information	10

OFFICIAL TRANSLATION

O-4	Ease of use and inclusiveness	10
O-5	Multilingualism and translation compatibility	10
M-1	Quality of response to requests and questions	15
M-2	Stakeholder engagement in dialogue	10
M-3	Correction of incorrect information and official response	5
M-4	Monitoring and using feedback for improvement	10
	Total	100

13.57. The score for each area is calculated based on the percentage of compliance with the requirements checked:

Calculated score = number of completed requirements ÷ number of verified requirements × maximum score.

13.58. The final result is interpreted as follows:

Total points	Openness and communication status
90–100	Based on open, trusting and active communication with the public
75–89	Mostly open and efficient, some improvements needed
60–74	There are significant gaps in the completeness of information or communication.
0–59	Public awareness and communication system is insufficient

13.59. Deliberately publishing unverified information as official information, intentionally misleading the public, unlawfully disclosing personal information, failing to correct a material error, or issuing an unauthorized official statement are considered critical non-compliance.

13.60. If a critical non-conformity is identified, a conclusion of full compliance with the standard will not be given, regardless of the high overall score.

13.61. The content and updating of open information is assessed based on Appendix 13.1, and public communication and information reliability are assessed based on Appendix 13.2.

☐there is

☐not available

Activity status:

☐based on open, trusting and active communication

☐mostly effective

☐significant improvement is needed

☐the system is not enough

Identified problem	Action to be taken	Responsible	Deadline	Expected result	Re-monitoring

14. QUALITY ASSURANCE STANDARDS IN EXTERNAL EVALUATION, ACCREDITATION AND RATINGS

Standard requirement

The University participates in external evaluation, accreditation, and rating processes to independently assess the compliance of institutional activities and educational programs with national and international quality requirements, determine the effectiveness of the quality assurance system, and continuously improve its activities.

External evaluation and accreditation are used not only as a means of obtaining a certificate or official status, but also as a mechanism for objectively

assessing the current state of educational quality, governance, academic processes, human resources, and infrastructure.

National and international rankings are not a type of accreditation. They are an additional external tool for assessing the dynamics of the development of the University's activities, its prestige, educational and scientific results, and its comparative position in relation to other higher education institutions.

Basic principles

14.1.The university participates in external evaluation processes in accordance with legislation, the requirements of authorized state bodies, and the methodologies of recognized accreditation and rating organizations.

14.2.External evaluation ensures legitimacy, impartiality, openness, respect for the independence of experts, stakeholder participation, and evidence-based approach.

14.3.Information provided for external assessments and ratings must be reliable, complete, verifiable, and based on official sources.

14.4.Concealing shortcomings, artificially altering data, exaggerating the results of activities, or presenting contradictory evidence is not permitted.

External evaluation forms and planning

14.5.The university participates in mandatory state accreditation, relevant external assessments of new educational programs, institutional and programmatic international accreditation, and other authoritative external assessments.

14.6.Mandatory external evaluations are scheduled based on deadlines set by law.

14.7.Participation in international accreditation is determined based on the strategic importance of the educational program, level of preparation, need for international recognition, and available resources.

14.8.When choosing an accreditation organization, its recognition, international reputation, experience in the relevant field of education, independence of experts, and transparency of assessment and appeal procedures are taken into account.

14.9.The decision to participate in the accreditation process is formalized by order of the rector or a decision of the relevant authorized management.

14.10.A preparation plan is developed for each external assessment, covering deadlines, responsibilities, required evidence, resources, and key risks.

Organizational management

14.11.A working group will be established by order of the rector to prepare for external evaluation and accreditation.

14.12.The leader and composition of the working group are determined based on the object of assessment, type of accreditation, and required competencies. In academic assessments, the Vice-Rector for Academic Affairs may lead the assessment.

14.13.External assessments of national and internal academic quality are coordinated by the Education Quality Control Department, and international accreditation and rating processes are coordinated by the International Accreditation and Ratings Department within its competence.

14.14.Faculties, departments and other structural divisions are responsible for the accuracy and timely submission of evidence, information and reports related to their activities.

Initial analysis and preparation

14.15.Preparation for external evaluation begins with a study of the evaluation criteria and a preliminary analysis of the current state of the University in relation to them.

14.16.For each criterion, available evidence, missing documents, process deficiencies, responsible units, and implementation deadlines are identified.

14.17.Measures are determined for identified non-conformities aimed at eliminating their root causes.

14.18.Preparatory measures should focus on real improvements to existing systems and processes, not on creating short-term external impressions.

14.19.Prepared documents and information are checked for compatibility, dates, versions, and official approval.

Evidence management

14.20.Evidence submitted for external evaluation is compiled in a single electronic or structured document register.

14.21.Evidence must be directly related to the assessment criterion, reflect the current situation, be formalized, and allow for verification.

14.22.The use of different and conflicting versions of the same document is not allowed. The current version and its approval date are clearly indicated.

14.23.Statistical data are compared with official information systems, reports, and primary documents.

14.24.It is prohibited to artificially create evidence, backdate, or present a process as having been completed when it was not actually completed.

Self-assessment

14.25.Self-evaluation is the process of critically and evidence-based analysis of a university or educational program's compliance with evaluation criteria.

14.26.The self-assessment report honestly highlights existing problems, risks, improvement needs, and the effectiveness of previous interventions, along with strengths.

14.27.The report is prepared in accordance with the criteria structure, in a clear, logically consistent manner, and free from redundant descriptions.

14.28.Each significant conclusion in the report is supported by an official document, statistical information, survey, monitoring result, or other verifiable evidence.

14.29.The final form of the self-assessment report is discussed in the working group and approved by the designated authorized leader.

External review process

14.30.The university creates the necessary conditions for external experts to independently familiarize themselves with documents, objects, the educational process, and other relevant activities.

14.31.Experts should have the opportunity to communicate freely with students, faculty, alumni, employers, and other interested parties.

14.32.It is not allowed to force meeting participants to give pre-prepared answers, limit their opinions, or illegally influence the experts' conclusions.

14.33.Consistency between oral responses and written information provided to experts is ensured.

14.34.Organizational and technical issues identified during the external visit will be promptly coordinated by the working group and relevant departments.

External evaluation results

14.35.The conclusions, decisions, and recommendations of external experts are analyzed with the participation of relevant departments.

14.36.The analysis identifies the strengths, weaknesses, opportunities for improvement, and root causes of the problems noted.

14.37.If the conclusion contains a factual error, procedural violation, or misinterpretation of evidence, an appeal may be filed in accordance with the established procedure.

14.38.An appeal shall not be used as a means of denying a genuine defect or unreasonably rejecting the result of an external examination.

Post-accreditation improvement

14.39.Based on the recommendations of the external evaluation, an improvement plan is developed that reflects the problem, measure, responsible person, deadline, necessary resources, and performance indicators.

14.40.The improvement plan is approved by the rector and is mandatory for the relevant departments.

14.41.The action taken is not only based on a report, but also on practical results and supporting evidence.

14.42.The implementation of the recommendations will be monitored by the Education Quality Control Department or the International Accreditation and Ratings Department within the scope of their authority.

14.43.For recommendations that are not implemented or are delayed, the cause, risk, and additional measures are determined.

14.44.The implementation of recommendations and the results achieved will be reviewed by the University Council and analyzed separately in the subsequent self-evaluation.

National and international rankings

14.45.The national and international rankings in which the university participates are selected based on its strategic goals, the reliability of the methodology, and the practical significance of the results.

14.46.For each rating methodology, indicators, calculation procedure, data sources, reporting period, and responsible units are determined.

14.47.The data provided for the ratings are verified with official information systems, financial reports, bibliometric databases, and other reliable sources.

14.48.Providing conflicting information to different rating organizations on the same indicator is not allowed.

14.49.It is prohibited to distort data, include non-existent results, or deliberately misinterpret the content of an indicator in order to artificially increase one's ranking.

14.50.The results of the ranking are used to identify the strengths and weaknesses of the University. The ranking position is not the only criterion for the quality of education and institutional effectiveness.

14.51.Measures determined based on the results of the ranking should be aimed at substantively improving the quality of education, scientific activity, international cooperation, openness, and management efficiency.

Announcing the results

14.52.The accreditation decision, certificate validity period, rating results, and key areas for improvement are made available to the public in an approved form.

14.53.The Education Quality Control Department and the International Accreditation and Ratings Department provide relevant information to the Press and Information Service Department.

14.54.When announcing the results, the accuracy, relevance, and clarity of the information are ensured, and limited information is not disclosed.

Monitoring and accountability

14.55.The summarized results of external evaluation, accreditation, and ratings are periodically reviewed at meetings under the rector and by the University Council.

14.56.The effectiveness of the process is assessed based on the quality of the self-assessment report, the reliability of the evidence, the cooperation of departments, the implementation of recommendations, and the impact of the measures taken.

14.57.Based on the monitoring results, evidence management, staff competence, methodological support, data quality, and post-accreditation control mechanisms will be improved.

Assessing the implementation of standards

14.58.The implementation of these standards is assessed in three stages based on an "external assurance cycle":

1. **Preparation and quality of evidence - 40 points;**
2. **Organization of the external evaluation process - 20 points;**
3. **Converting results into improvements - 40 points.**

14.59.The assessment areas are divided as follows:

Code	Assessment direction	Maximum score
TB-1	Study of evaluation criteria and preliminary analysis	10
TB-2	Quality of the self-assessment report	15
TB-3	Reliability and management of evidence	15
TB-4	Impartial organization of the external examination process	10
TB-5	Divisions and stakeholder involvement	10
TB-6	Implementation of measures on recommendations	20
TB-7	Effectiveness of the measures taken	10
TB-8	Reliability of rating data and its use in development	10
	Total	100

14.60.The final result is interpreted as follows:

OFFICIAL TRANSLATION

Total points	External quality assurance status
90–100	Systematic, reliable and improvement-oriented
75–89	Generally effective, some processes need improvement
60–74	There are significant shortcomings in the preparation or implementation of recommendations
0–59	The external evaluation and ratings management system is insufficient

14.61. Providing false evidence, backdating a document, instructing respondents to give a forced answer, pressuring experts, concealing a serious deficiency, or deliberately distorting rating data are considered critical inconsistencies.

14.62. If a critical non-conformity exists, a conclusion of full compliance with the standard will not be given, regardless of the high overall score.

14.63. The preparation for the external assessment and the state of evidence are monitored based on Annex 14.1, and the process of improving external recommendations and rating indicators is monitored based on Annex 14.2.

ANNEX 14.1: Preparation and Evidence Matrix for External Evaluation Criteria

A. General information

Indicator	Information
Assessment type	
Accreditation or assessment organization	
Evaluation object	
External visit or submission date	
Working group leader	
Coordination unit	
Matrix update date	

B. Criteria preparation

T/r	Evaluation criterion	Brief analysis of the current situation	Key facts	The unit that owns the evidence	Missing evidence or process	Readiness status	Responsible	Deadline

15. POLICY IMPLEMENTATION, MONITORING, REPORTING AND REVIEW

General rules

This Policy establishes uniform principles, standards, authorities, and implementation mechanisms for quality assurance at the University.

The implementation of the policy is not the sole responsibility of the Education Quality Control Department. The university leadership, vice-rectors, faculties, departments, structural divisions, professors and teachers, and staff participate in fulfilling its requirements within the scope of their competence.

The Department of Education Quality Control methodologically coordinates the implementation of the policy, summarizes monitoring data and prepares analytical information for management. The final institutional assessment of the implementation of the policy is given by the Rector and the University Council.

Policy implementation

15.1. The requirements of this Policy will be integrated into the University's development strategy, annual work plans, activities of faculties, departments and structural divisions, and relevant internal documents.

15.2. The requirements set out in the policy are implemented not as a separate control measure, but as a component of the University's daily management, educational, scientific, international, economic, social and administrative activities.

15.3. The University management ensures the availability of the necessary organizational, financial, human, material and information resources to implement the requirements of the Policy.

15.4. Vice-rectors coordinate the implementation, implementation, and analysis of results of standards relevant to their areas of activity.

15.5. Deans of faculties, heads of departments and heads of structural divisions in their areas of activity:

- Putting policy requirements into practice;
- setting plans and indicators;
- generating reliable information and evidence;
- eliminate identified deficiencies;
- is responsible for improving results.

15.6. Faculty and staff are informed of the requirements, powers, and responsibilities of this Policy relevant to their work.

15.7.Internal procedures, forms and methodological recommendations for the implementation of policy requirements are developed by the relevant structural divisions within their competence.

Organization of monitoring

15.8.Policy implementation is monitored through ongoing surveillance, periodic monitoring, analysis, and institutional review.

15.9.Monitoring is carried out based on the standards, indicators, evaluation criteria, information systems, reports, questionnaires, appeals, and the results of internal and external evaluations established in the relevant chapters.

15.10.Monitoring is organized at the following levels:

Monitoring level	Main content	Recommended frequency
Structural division	Implementation of the plan, tasks and indicators	Monthly or quarterly
Field of activity	Summary of the results of the units under the supervision of the Vice-Rector	Semi-annual
University scale	Overall status of the quality assurance system	Annual

15.11.The monitoring frequency is determined based on the nature of the activity, the level of risk, legal requirements, and the deadlines set out in the relevant chapters.

15.12.Monitoring is not limited to identifying deficiencies. It also analyzes:

- achieved results;
- strengths;
- best practices;
- recurring problems;
- systemic risks;
- development opportunities.

15.13.Each structural unit carries out monitoring of its activities and presents the results to the relevant leader.

15.14.The Education Quality Control Department methodologically coordinates monitoring processes, summarizes data from various sources, and analyzes their consistency.

15.15.The implementation of strategic indicators is analyzed by the Strategic Development and Transformation Department within the scope of its powers.

Nonconformities and corrective actions

15.16.A non-conformance is recorded when a policy requirement is not met, a specified result is not achieved, data is unreliable, or a systemic problem is identified.

15.17.Non-conformities can be classified according to their impact and level of risk as follows:

- small discrepancy;
- significant discrepancy;
- critical inconsistency.

15.18.For significant and critical nonconformities, their cause, impact, likelihood of recurrence, and relationship to other processes are investigated.

15.19.The measures developed for the identified deficiency shall specify at least the following:

- the content of the problem;
- task to be performed;
- responsible executive;
- deadline;
- necessary resources;
- expected result;
- evidence supporting the result;
- re-monitoring date.

15.20.The implementation of a corrective action is assessed not only by the submission of a report or document, but also by the actual resolution of the problem and the improvement of the relevant outcome.

15.21.If the measure does not produce the expected result, the cause of the problem is re-analyzed and additional measures are determined.

15.22.When a critical non-conformity is identified, the issue is immediately escalated to the appropriate vice-rector and rector, and prompt action is taken to mitigate the risk.

Reporting

15.23.Structural divisions submit reports within the established deadlines on the implementation of the standards of the Policy relevant to their activities.

15.24.Reports should not just be a list of activities carried out. They should cover the following:

- planned and achieved results;
- dynamics of key indicators;
- identified problems and risks;
- stakeholder opinion;
- corrective actions taken;
- effectiveness of measures;

- suggestions for the next period.

15.25.The information presented in the reports should be based on official information systems, primary documents, and other verifiable evidence.

15.26.The Education Quality Control Department prepares an annual summarized internal quality report based on information provided by vice-rectors, faculties, departments, and structural divisions.

15.27.The annual summary report shall reflect at least the following:

- Status of implementation of policy standards;
- main quality indicators and their dynamics;
- internal monitoring results;
- external evaluation and accreditation conclusions;
- stakeholder opinion;
- critical and recurring inconsistencies;
- implementation of corrective measures;
- systemic risks;
- priorities for the next period.

Institutional review of policy implementation

15.28.The effectiveness of policy implementation is assessed not through the Education Quality Control Department's own assessment of its own activities, but through an institutional review of the results generated across all areas of activity.

15.29.The summarized analytical report prepared by the Education Quality Control Department will be discussed with the participation of relevant vice-rectors and structural divisions.

15.30.The report discussion will consider the reliability of the data, the causes of the identified problems, the position of the responsible departments, and the proposed measures.

15.31.The overall implementation of the policy, systemic issues, critical inconsistencies, and priority areas for improvement are discussed at a meeting with the rector.

15.32.The final institutional results of policy implementation will be reviewed by the University Council.

15.33.Based on the results of the review, the University Council:

- Assesses the overall status of policy implementation;
- identifies priority problems and risks;
- assigns tasks to responsible managers and departments;
- determines the necessary resources and deadlines;
- identifies the need for additional monitoring or external evaluation;

- Makes a decision on policy revision.

15.34.The Department of Educational Quality Control performs a coordinating and analytical function in institutional review, but does not independently determine the final grade.

Policy review

15.35.This Policy will be reviewed at least once every three years.

15.36.The Policy may be revised ahead of time in the following cases:

- when legislation and state requirements change;
- When the university's development strategy is updated;
- when the organizational structure or powers change;
- when external evaluation and accreditation recommendations are made;
- when new educational, management or digital mechanisms are introduced;
- when systematic or critical problems are identified during monitoring;
- upon receipt of substantiated proposals from interested parties.

15.37.The following sources will be analyzed when reviewing the policy:

- annual internal quality reports;
- monitoring results;
- strategic indicators;
- external evaluation conclusions;
- accreditation recommendations;
- appeals and complaints;
- the opinions of students, staff, employers and other stakeholders;
- proposals from structural divisions.

15.38.New versions of the policy or amendments to it will be agreed with the relevant vice-rectors and structural divisions.

15.39.Amendments and additions to the policy will be considered by the University Council and approved in accordance with the established procedure.

15.40.New policy revisions or significant changes will be communicated to faculty, staff, students, and other stakeholders through appropriate communication channels.

Continuous improvement

15.41.Policy implementation is based on the following continuous quality cycle: planning, implementation, evidence generation, monitoring and analysis,

institutional review, corrective action, re-examination of the result, improvement.

15.42. The effectiveness of a quality assurance system is determined not by the number of documents or control measures carried out, but by the improvement of operational results, the non-recurrence of problems, and the satisfaction of the needs of interested parties.

16. FINAL RULES

16.1. This Policy is the main internal regulatory document that defines the goals, principles, institutional standards, powers, boundaries of responsibility, and mechanisms for continuous improvement of quality assurance at Termez State University.

16.2. The requirements of the Policy are mandatory for the University's governing bodies, vice-rectors, faculties, departments, structural divisions, professors, teachers, employees, and other responsible persons participating in the processes of education and its support, within the scope of their powers.

16.3. Students, graduates, employers, and other stakeholders will participate in the processes of quality assessment, feedback, and improvement of educational programs and University activities as provided for in this Policy, in accordance with the established procedure.

16.4. This Policy is applied in conjunction with the current legislation of the Republic of Uzbekistan, regulatory legal acts in the field of higher education, the University Charter, development strategy, and other internal regulatory documents.

16.5. In the event of any inconsistency between the provisions of this Policy and regulatory legal acts of higher legal force, the requirements of the current legislation shall apply. The relevant provisions of the Policy shall be brought into line with the legislation in accordance with the established procedure.

16.6. Issues not directly regulated by this Policy are resolved on the basis of current legislation, the University Charter, academic regulations, regulations of structural divisions, service regulations, and other relevant internal documents.

16.7. Detailed procedures for implementing the standards set forth in the Policy shall be determined by the relevant statutes, instructions, regulations, rector's orders and other internal documents of the University. These documents shall not contradict the goals, principles and requirements of the Policy.

16.8. Structural divisions of the University shall bring their internal documents, work plans, indicators and procedures related to their activities into line with the requirements of this Policy and ensure their consistent application in practice.

16.9. Those responsible for improper implementation of policy requirements, provision of unreliable information, obstruction of quality assurance processes, or unreasonably failure to perform assigned tasks shall be held liable in accordance with the procedure established by law and the University's internal documents.

16.10. Explanation of the content of this Policy, provision of methodological support for its application, analytical generalization of monitoring data, and general coordination of the activities of structural units are carried out by the Education Quality Control Department in cooperation with the Educational and Methodological Department and other relevant units.

The Department of Education Quality Control does not independently determine the final institutional assessment of the implementation of the Policy. The final results are considered at a meeting under the rector and at the University Council.

16.11. The criteria, assessment tools, forms, control cards, monitoring panels and other materials attached to the Policy are an integral part of it and are used in accordance with the requirements of the Policy.

The content of the applications is updated as required by legislation, University activities, or quality assessment needs change.

16.12. The approved copy of the Policy, amendments to it and the current version of the annexes are recorded, stored and delivered to the relevant structural units in accordance with the established procedure.

Outdated, unapproved, or modified unofficial copies of the policy are not permitted to be used as official documents.

16.13. The public part of this Policy will be published on the official website of the University. When publishing it, the protection of personal, service-related, confidential and legally restricted information will be ensured.

16.14. Amendments and additions to the Policy shall be made in accordance with the procedure established for its initial approval. The amendments shall be consistent with the general objectives, principles of the Policy, and the integrity of the quality assurance system.

16.15. This Policy shall enter into force after being reviewed and approved by the University Council and confirmed by the relevant order of the Rector.

From the date of entry into force of this Policy, the University's quality assurance documents shall be applied in accordance with its requirements.

OFFICIAL TRANSLATION

Internal regulations that contradict the Policy shall be revised, harmonized or declared invalid in accordance with the established procedure.
